Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- *Mailing in the postage-paid card on the cover of this report;*
- *Calling 1-866-349-4564; or*
- *Signing up on* www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek long-term capital appreciation by investing primarily in companies located outside of the United States.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees
(fees paid directly from your investment)
Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.67%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses[1]	0.15%
Acquired Fund Fees and Expenses[2]	0.01%
Total Annual Fund Operating Expenses	1.13%

1 "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
2 Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a $10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/WCM Focused International Equity Fund Class A			
1 year	3 years	5 years	10 years
$115	$359	$622	$1,375

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	24%

Principal Investment Strategies. The Fund seeks to achieve its investment objective by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities.

The Fund's investments in equity securities may include common stocks, preferred stocks and warrants. The Fund invests primarily in equity securities or depositary receipts of non-U.S. domiciled companies located in developed countries, but may also invest in emerging markets and less developed countries.

The Fund's investments in depositary receipts may include American Depositary Receipts ("ADRs"). ADRs are receipts that represent interests in foreign securities held on deposit by U.S. banks.

WCM Investment Management, LLC, the Fund's sub-adviser (the "Sub-Adviser"), uses a bottom-up approach that seeks to identify companies with attractive fundamentals, such as long-term growth in revenue and earnings, and that show a high probability for superior future growth. The Sub-Adviser's investment process focuses on seeking industry leading companies that the Sub-Adviser believes possess growing competitive advantages; corporate cultures emphasizing strong, quality and experienced management; low or no debt; and attractive relative valuations. The Sub-Adviser also considers other factors in selecting securities, including political risk, monetary policy risk, and regulatory risk.

Although the Fund may invest in companies in any capitalization range, it will generally invest in large, established multinational companies. The Fund generally will invest in securities of companies located in different regions and in at least three different countries. From time to time, the Fund may have a significant portion of its assets invested in the securities of companies in one or a few countries or regions.

The Sub-Adviser will generally reduce position size in the portfolio based on individual holding size, industry/sector weight, as well as other relevant factors. When performing a fundamental analysis, the Sub-Adviser views valuation as the most significant factor in managing position size. The key factors that the Sub-Adviser considers when determining whether to sell out of a position completely are its evaluation(s) of whether a company's competitive advantage is deteriorating or no longer expanding; there are more attractive names in an essentially similar industry; a company's leadership is not performing as expected; a company's culture is challenged; it deems valuation to be excessive; and/or there is material geopolitical or currency risk.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign

withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.

- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Currency risk* – Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- *Depositary receipts risk* – Depositary receipts, such as American depositary receipts ("ADRs"), global depositary receipts ("GDRs"), and European depositary receipts ("EDRs"), may be issued in sponsored or un-sponsored programs. In a sponsored program, a security issuer has made arrangements to have its securities traded in the form of depositary receipts. In an un-sponsored program, the issuer may not be directly involved in the creation of the program. Depositary receipts involve many of the same risks as direct investments in foreign securities. These risks include: fluctuations in currency exchange rates, which are affected by international balances of payments and other economic and financial conditions; government intervention; and speculation. With respect to certain foreign countries, there is the possibility of expropriation or nationalization of assets, confiscatory taxation, political and social upheaval, and economic instability. Investments in depositary receipts that are traded over the counter may also subject a Fund to liquidity risk.
- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- *Foreign regulatory risk* – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- *Issuer risk* – The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Fund's Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The performance data includes the performance of the JNL/WCM Focused International Equity Fund, then a series of the Jackson Variable Series Trust, for periods before the Fund's registration statement became effective.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Westchester Capital Event Driven Fund
Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- *Mailing in the postage-paid card on the cover of this report;*
- *Calling 1-866-349-4564; or*
- *Signing up on* www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek to provide attractive risk-adjusted returns with low relative volatility in virtually all market environments. Risk-adjusted return is a concept that considers not only an investment's return, but also the amount of potential risk involved in producing that return.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees
(fees paid directly from your investment)
Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	1.05%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses[1,2,3]	0.49%
Acquired Fund Fees and Expenses[4]	0.22%
Total Annual Fund Operating Expenses	2.06%

1 "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

2 "Other Expenses" are based on amounts incurred during the period ended December 31, 2019. The amount includes the costs associated with the Fund's short sales on equity securities. When a cash dividend is declared on a security for which the Fund holds a short position, the Fund incurs the obligation to pay an amount equal to that dividend to the lender of the shorted security. In addition, the Fund incurs borrowing fees related to short sale transactions. The annualized ratios of dividend expense on short sales and borrowing fees related to short sales to assets for the period were 0.36%. The Fund's actual dividend expense and borrowing fees on securities sold short in future periods may be significantly higher or lower than the amounts above due to, among other factors, the extent of the Fund's short positions, the actual dividends paid with respect to the securities the Fund sells short, and the actual timing of the Fund's short sale transactions, each of which is expected to vary over time. The annualized ratios of dividend expense on short sales and borrowing fees related to short sales have been restated to reflect current fees.

3 "Other Expenses" are based on amounts incurred during the period ended December 31, 2019. The amount includes financing costs associated with

secured borrowings. The annualized ratios of financing costs related to secured borrowings were 0.01%. The Fund's actual financing costs may be significantly higher or lower than the amounts above due to, among other factors, the extent of the Fund's involvement with secured borrowings and the costs associated with those transactions, each of which is expected to vary over time.

[4] Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a $10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Westchester Capital Event Driven Fund Class A			
1 year	3 years	5 years	10 years
$209	$646	$1,108	$2,390

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
1/1/2019 - 12/31/2019	286%

Principal Investment Strategies. The Fund primarily employs investment strategies designed to capture price movements generated by specific events, including, but not limited to, securities of companies involved in mergers, acquisitions, asset sales or other divestitures, restructurings, refinancings, recapitalizations, reorganizations or other special situations (referred to as “event-driven opportunities”). Among the investment strategies the sub-adviser, Westchester Capital Management, LLC (“Sub-Adviser”) may use on behalf of the Fund are the following:

Merger-Arbitrage Strategy: The Fund may purchase the securities of companies that are involved in publicly announced mergers, takeovers and other corporate reorganizations, and use one or more arbitrage strategies in connection with the purchase. Although a variety of strategies may be employed depending upon the nature of the reorganizations, the most common merger-arbitrage strategy involves purchasing the shares of an announced acquisition target at a discount to their expected value upon completion of the acquisition. The size of this discount, known as the arbitrage “spread,” generally determines the Fund’s potential profit on any given investment. In conjunction with investment in a target company, the Fund may employ a variety of hedging strategies to protect against issuer-related risk, including selling short the securities of the company that proposes to acquire the target company and/or the purchase and sale of put and call options.

Special Situations Strategy: The Fund may invest in the securities of issuers based upon the expectation of the Sub-Adviser that the price of such securities may change in the short term due to a special situation, such as a stock buy-back, spinoffs and split-offs, credit rating upgrade, the outcome of litigation or other dispute, a positive earnings report, legislative or regulatory changes or other catalyst-driven event.

Capital Structure Arbitrage: Capital structure arbitrage is an investment strategy that seeks to profit from relative pricing discrepancies between related securities, such as securities of different classes issued by the same issuer. For example, when the Sub-Adviser believes that unsecured debt securities are overvalued in relation to senior secured debt securities of the same issuer, the Fund may purchase the senior secured debt securities of the issuer and take a short position in the unsecured debt securities of the same issuer.

Convertible Arbitrage: Convertible arbitrage is a strategy that seeks to profit from mispricings between a firm’s convertible securities and the underlying equity securities. A common convertible arbitrage approach matches a long position in a convertible security with a short position in the underlying common stock when an investor believes the convertible security is undervalued relative to the value of the underlying equity security. In such a case, the investor may seek to sell short shares of the underlying common stock in order to hedge exposure to the issuer of the equity securities. Convertible arbitrage positions may be designed to earn income from coupon or dividend payments on the investment in the convertible securities.

Distressed/Restructuring: The Fund may invest in securities, including debt securities, of financially distressed companies and companies undergoing or expected to undergo bankruptcy or other insolvency proceeding. The Fund may invest in corporate bonds, privately held loans and other securities or obligations of companies that are highly leveraged, are experiencing financial difficulties or have filed for bankruptcy. The Fund may profit from its investments in such issuers if the issuer undergoes a successful restructuring or recapitalization, undertakes asset sales or participates in spin-off transactions. The Fund may also purchase securities in anticipation of a company's recovery or turnaround or the liquidation of all or some of the company's assets.

Option Income Strategies: The Fund may sell, or "write," call options on its portfolio securities. The Fund may also write call options on one or more basket of stocks, such as the S&P 500 Index or an industry sub-group of the S&P 500 Index. The options written by the Fund are considered "covered" if the Fund owns the stocks or basket of stocks against which the options are written. The Sub-Adviser may determine to purchase shares and sell call options on those shares at approximately the same time, although the sale of options on the Fund's portfolio securities may occur at any time or not at all. The Sub-Adviser may utilize the option writing strategy at any time, including in a relatively flat or declining market environment, to earn premium income. The Fund may sell call options on substantially all of its portfolio securities.

The Fund may utilize other options strategies, such as writing options on securities it does not currently own (known as "uncovered" options), buying or selling options when the Sub-Adviser believes they may be mispriced or may provide attractive opportunities to earn income, or engaging in risk-reversal transactions. In a risk-reversal transaction, the Sub-Adviser may buy put options and sell call options against a long stock position.

In implementing the Fund's investment strategies, the Fund may invest in a wide variety of investments, such as equity securities of any kind, debt securities of any kind, including those that pay a fixed or floating rate of interest, warrants, convertible securities, master limited partnerships, derivative instruments of any kind, including options, futures, currency forwards and swaps.

The Fund may purchase fixed- and floating-rate income investments of any credit quality or maturity, including corporate bonds, bank debt and preferred securities. Certain of the debt securities in which the Fund invests may carry non-investment-grade ratings (rated BB+ or lower by S&P Global Ratings, or comparably rated by another nationally recognized statistical rating organization), or may be unrated investments of comparable quality, commonly referred to as "high-yield" or "junk" bonds.

The Fund may enter into derivative transactions and other instruments of any kind for hedging purposes, duration or volatility management purposes, or otherwise to gain, or reduce, long or short exposure to one or more asset classes or issuers. For example, the Fund may write call options on its portfolio securities or a market index that is representative of its portfolio with the expectation of generating additional income. The Sub-Adviser may seek to hedge the Fund's portfolio against a decline in the value of its portfolio securities or a decline in the market generally by purchasing put options.

The Fund also may use derivative transactions with the purpose or effect of creating investment leverage.

The Fund may invest in derivative instruments in any manner consistent with its investment strategies.

The Fund may invest in other investment companies, including exchange-traded funds ("ETFs"). Those investments may be made for the purpose of, among other things, gaining or hedging market exposure, hedging exposure to a particular industry, sector or component of an event-driven opportunity, or managing the Fund's cash position. The Fund may hold a significant portion of its assets in cash, money market investments, money market funds or other similar short-term investments for defensive purposes or to preserve the Fund's ability to capitalize quickly on new market opportunities. During periods when the Fund is so invested, its investment returns may be lower than if it were not so invested and the Fund may not achieve its investment objective. The Fund may also invest in special purpose acquisition companies, a form of investment vehicle typically formed for the purpose of acquiring an operating business.

In making investments for the Fund, the Sub-Adviser is guided by the following general considerations:

- before an initial position in an event-driven opportunity is established, a preliminary analysis is made of the expected event to determine the probability and timing of the event;
- in deciding whether or to what extent to invest, the Sub-Adviser evaluates, among other things, the credibility, strategic motivation and financial resources of the relevant participants, and the liquidity of the securities involved in the transaction; and
- the risk-reward characteristics of each event-driven opportunity are assessed on an ongoing basis.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Event driven and special situations risk* – At times, the Fund may seek to benefit from what are considered "special situations," such as mergers, acquisitions, consolidations, liquidations, spin-offs, tender or exchange offers, reorganizations, restructurings or other unusual events that are expected to affect a particular issuer. Such special situations may involve so-called "distressed companies," the debt obligations of which typically are unrated, lower-rated, in default or close to default. Also, securities of distressed companies are generally more likely to become worthless. There is a risk that the expected change or event might not occur, which could cause the price of the security to fall, perhaps sharply.

- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- *Company risk* **–** Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Distressed securities risk* – Distressed securities risk refers to the uncertainty of repayment of defaulted securities and obligations of distressed issuers. Because the issuer of such securities is likely to be in a distressed financial condition, repayment of distressed or defaulted securities (including insolvent issuers or issuers in payment or covenant default, in workout or restructuring or in bankruptcy or insolvency proceedings) is subject to significant uncertainties. Insolvency laws and practices in foreign jurisdictions are different than those in the U.S. and the effect of these laws and practices may be less favorable and predictable than in the U.S. Investments in defaulted securities and obligations of distressed issuers are considered highly speculative.
- *Credit risk* **–** The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Liquidity risk* – Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- *Portfolio turnover risk* **–** Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- *Investment in other investment companies risk* – As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited**.**
- *Leverage risk* **–** Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund's gains and losses in comparison to the amount of the Fund's assets (that is, assets other than borrowed assets) at risk, which may cause the Fund's portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- *Options risk* – If the Fund buys an option, it buys a legal contract giving it the right to buy or sell a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium paid by the Fund. If the Fund sells an option, it sells to another person the right to buy from or sell to the Fund a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium received by the Fund. Options may be illiquid and the Fund may have difficulty closing out its position. The prices of options can be highly volatile and the use of options can lower total returns.

- *Derivatives risk* **–** Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- *Speculative exposure risk* **–** If a Fund invests in a derivative instrument (or engages in a similarly speculative practice) not for the purpose of hedging, the Fund is directly exposed to the risks associated with an investment in that derivative. Gains or losses from speculative positions in a derivative may be much greater than the derivative's original cost and, in certain instances, potential losses may be unlimited.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Master limited partnership risk* – An investment in MLP units involves some risks that differ from an investment in the common stock of a corporation. Holders of MLP units have limited control on matters affecting the partnership. Investing in MLPs involves certain risks related to investing in the underlying assets of the MLPs and risks associated with pooled investment vehicles. MLPs holding credit-related investments are subject to interest rate risk and the risk of default on payment obligations by debt issuers. MLPs that concentrate in a particular industry or a particular geographic region are subject to risks associated with such industry or region. The benefit derived from the Fund's investment in MLPs is largely dependent on the MLPs being treated as partnerships for federal income tax purposes. Certain MLPs may be illiquid securities.
- *Financial services risk* – An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Short sales risk* **–** A short sale may be effected by selling a security that the Fund does not own. If the price of the security sold short increases, the Fund would incur a loss; conversely, if the price declines, the Fund will realize a gain. The Fund may take a short position in securities or in a derivative instrument, such as a future, forward or swap. Short sales involve greater reliance on the investment manager's ability to accurately anticipate the future value of an instrument, potentially higher transaction and other costs (that will reduce potential Fund gains and increase potential Fund losses), and imperfect correlation between the actual and desired level of exposure. Because the Fund's potential loss on a short position arises from increases in the value of the asset sold short, the extent of such loss, like the price of the asset sold short, is theoretically unlimited. By investing the proceeds received from selling securities short, the Fund could be deemed to be employing a form of leverage, which creates special risks. The Fund's long positions could decline in value at the same time that the value of the short positions increase, thereby increasing the Fund's overall potential for loss to a greater extent than would occur without the use of leverage. Short positions typically involve increased liquidity risk and transaction costs, and the risk that the third party to the short sale may fail to honor its contract terms.
- *Accounting risk* – The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- *Large-capitalization investing risk* – Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- *Mid-capitalization investing risk* **–** The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- *Small-capitalization investing risk* **–** Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market

capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.

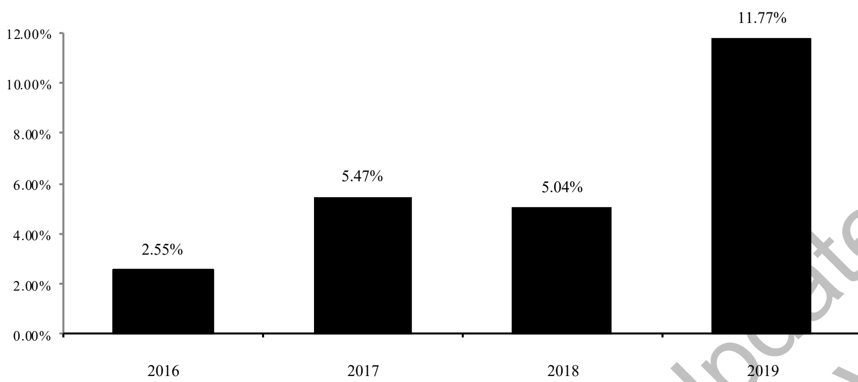
- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Hedging instruments risk* – The Fund may attempt, from time to time, to hedge (protect) against currency risks, largely using forward foreign currency exchange contracts, where available and when, in the Sub-Adviser's opinion, it would be advantageous to the Fund. A forward foreign currency exchange contract is an agreement to buy or sell a specific currency at a future date and at a price set at the time of the contract. Forward foreign currency exchange contracts may reduce the risk of loss from a change in value of a currency, but they also limit any potential gains and do not protect against fluctuations in the value of the underlying position. For example, during periods when the U.S. dollar weakens in relation to a foreign currency, the Fund's use of a currency hedging program will result in lower returns than if no currency hedging programs were in effect. Forward foreign currency exchange contracts and put options are considered derivative investments, because their value and performance depend, at least in part, on the value and performance of an underlying asset. The Fund may also use futures, swaps, and other derivative instruments to hedge risk. The Fund's investment in derivatives may involve a small investment relative to the amount of risk assumed. To the extent the Fund enters into these transactions, its success will depend on the Sub-Adviser's ability to predict market movements, and their use may have the opposite effect of that intended. Risks include potential loss due to the imposition of controls by a government on the exchange of foreign currencies, the loss of any premium paid to enter into the transaction, delivery failure, default by any other party, or inability to close out a position because the trading market becomes illiquid. In addition, for certain reasons, the Fund may not seek to establish a perfect correlation between such hedging instruments and the portfolio instruments being hedged. Such imperfect correlation may prevent the Fund from achieving the intended hedge or expose the Fund to risk of loss. It is not possible to hedge fully or perfectly against any risk.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Call risk* – Call risk is the risk that, during a period of falling interest rates, the issuer may redeem a security by repaying it early, which may reduce the Fund's income if the proceeds are reinvested at lower interest rates.
- *Convertible securities risk* – Convertible securities have investment characteristics of both equity and debt securities. Investments in convertible securities may be subject to market risk, credit and counterparty risk, interest rate risk and other risks associated with investments in equity and debt securities, depending on the price of the underlying security and conversion price. While equity securities may offer the potential for greater long-term growth than most debt securities, they generally have higher volatility. The value of convertible and debt securities may fall when interest rates rise. Securities with longer durations tend to be more sensitive to changes in interest rates, generally making them more volatile than securities with shorter durations. Due to their hybrid nature, convertible securities are typically more sensitive to changes in interest rates than the underlying common stock, but less sensitive than a fixed rate corporate bond.
- *Privately placed securities risk* – The Fund's investments may also include privately-placed securities, which are subject to resale restrictions. Investments in these securities usually will decrease a Fund's liquidity level to the extent the Fund may be unable to sell or transfer these securities due to restrictions on transfers or on the ability to find buyers interested in purchasing the securities. The illiquid nature of the market for privately placed securities, as well as the lack of publicly available information regarding these securities, may also adversely affect the Fund's ability to fair value such securities at certain times and could make it difficult for the Fund to sell them. The Fund could lose money on such investments.
- *Foreign regulatory risk* – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Annual Total Returns as of December 31

Class A



Best Quarter (ended 6/30/2018): 5.27%; **Worst Quarter (ended 12/31/2018):** -1.19%

Average Annual Total Returns as of 12/31/2019

Portfolio Management.

Investment Adviser to the Fund:
Jackson National Asset Management, LLC ("JNAM")

Sub-Adviser:
Westchester Capital Management, LLC ("Westchester")

Portfolio Managers:

Name:	Joined Fund Management Team In:	Title:
Michael T. Shannon	March 2016	Portfolio Manager, Westchester
Roy D. Behren	March 2016	Portfolio Manager, Westchester

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/WMC Balanced Fund
Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- *Mailing in the postage-paid card on the cover of this report;*
- *Calling 1-866-349-4564; or*
- *Signing up on www.jackson.com*

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is reasonable income and long-term capital growth.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees
(fees paid directly from your investment)
Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.32%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses[1]	0.10%
Acquired Fund Fees and Expenses[2]	0.01%
Total Annual Fund Operating Expenses	0.73%

1 "Other Expenses" include an Administrative Fee of 0.09% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
2 Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a $10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/WMC Balanced Fund Class A			
1 year	3 years	5 years	10 years
$75	$233	$406	$906

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	42%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing primarily in a diversified portfolio of common stocks and investment grade fixed-income securities. The Fund may invest in any type or class of security. The anticipated mix of the Fund's holdings is typically 60-70% of its assets in equities and 30-40% in fixed-income securities, including, investment-grade corporate bonds, U.S. Treasury and government agency bonds, mortgage-backed securities, asset-backed securities, and commercial-backed securities. Cash and cash equivalents are included in the fixed income fund weighting.

The Fund may invest in derivatives to reduce fixed-income exposure to facilitate meeting the Fund's objective.

The Fund may invest up to 25% of its assets in foreign equity and foreign fixed-income securities.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Accounting risk* – The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- *Company risk* **–** Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- *Credit risk* **–** The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Derivatives risk* **–** Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Financial services risk* – An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- *Fixed-income risk* **–** The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security

before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.

- *Foreign regulatory risk* – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Investment strategy risk* – The investment manager uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the investment manager in accordance with these investment strategies may not produce the returns the investment manager expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- *Liquidity risk* – Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Mortgage-related and other asset-backed securities risk* – Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *Stock risk* – Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- *U.S. Government securities risk* – Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.

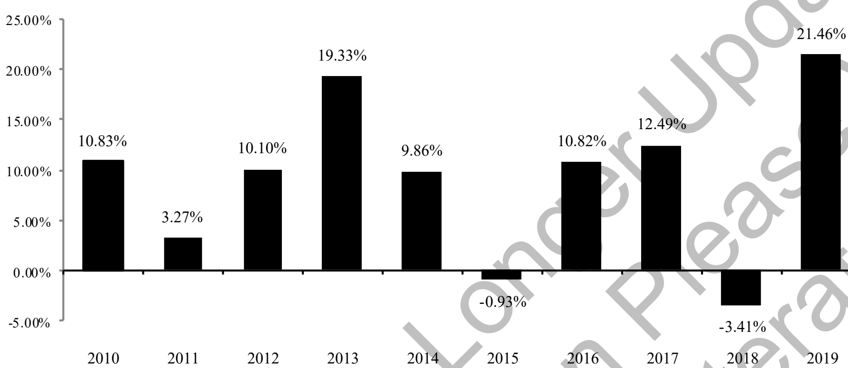
Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices which have investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Consistent with the Fund's principal investment strategies, the Fund uses the 65% S&P 500 Index, 35% Bloomberg Barclays U.S. Aggregate Bond Index as the Fund's secondary benchmark.

Annual Total Returns as of December 31

Class A



Best Quarter (ended 3/31/2019): 8.74%; **Worst Quarter (ended 9/30/2011):** -8.79%

* Effective June 30, 2020, Mr. Bousa will be removed as a portfolio manager for the Fund.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/WMC Government Money Market Fund
Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- *Mailing in the postage-paid card on the cover of this report;*
- *Calling 1-866-349-4564; or*
- *Signing up on* www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to achieve as high a level of current income as is consistent with the preservation of capital and maintenance of liquidity.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees
(fees paid directly from your investment)
Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.16%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses[1]	0.11%
Total Annual Fund Operating Expenses[2,3]	0.57%

[1] "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
[2] Expense information has been restated to reflect current fees.
[3] JNAM has contractually agreed to waive fees and/or reimburse expenses of the Fund to the extent necessary to limit the total operating expenses of each class of shares of the Fund, transactional costs, if any, interest, taxes and dividend and extraordinary expenses, to an annual rate (as a percentage of the average daily net assets of the Fund) equal to or less than the Fund's investment income for the period. The fee waiver will continue through April 30, 2021. The Adviser may extend the fee waiver for a subsequent one-year term, and thereafter, the fee waiver will automatically renew for additional subsequent one-year terms unless the Board of Trustees approves the elimination of the fee waiver. In addition, when the Fund receives income sufficient to pay a dividend, the Adviser may recapture previously waived fees and expenses for a period of three years.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a $10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is in effect through April 30, 2021. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/WMC Government Money Market Fund Class A			
1 year	3 years	5 years	10 years
$58	$183	$318	$714

Principal Investment Strategies. Under normal circumstances, the Fund seeks to achieve its investment objective by investing at least 99.5% of its total assets in cash, U.S. Government securities, and/or repurchase agreements that are "collateralized fully" (i.e., collateralized by cash or government securities). The government securities typically have a maximum remaining maturity of 397 calendar days and the repurchase agreements are collateralized by cash or government securities with a maximum remaining maturity of 397 days. Under normal circumstances, the Fund will invest at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in government securities or repurchase agreements collateralized by government securities. As a government money market fund, the Fund is exempt from requirements that permit money market funds to impose a liquidity fee and/or temporary redemption gate. While the Fund's Board of Trustees may elect to subject the Fund to liquidity fee and gate requirements in the future, the Board of Trustees has not elected to do so at this time.

The Fund seeks to maintain a stable net asset value of $1.00 per share, neither the Federal Deposit Insurance Company, nor any other government agency insures or protects your investment.

Principal Risks of Investing in the Fund. You could lose money by investing in the Fund. Although the Fund seeks to preserve the value of your investment at $1.00 per share, it cannot guarantee it will do so. An investment in the Fund is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. The Fund's sponsor has no legal obligation to provide financial support to the Fund, and you should not expect that the sponsor will provide financial support to the Fund at any time.

As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. While the Fund may hold securities that carry U.S. Government guarantees, these guarantees do not extend to shares of the Fund itself. The principal risks associated with investing in the Fund include:

- *Fixed-income risk* **–** The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Foreign regulatory risk* – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- *Income risk* – The Fund is subject to the risk that the income generated from the Fund's investments may decline in the event of falling interest rates. Income risk may be high if the Fund's income is predominantly based on short-term interest rates, which can fluctuate significantly over short periods. The Fund's distributions to shareholders may decline when interest rates fall.
- *Interest rate risk* **–** When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market

changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund’s investment objective or negatively affect the Fund’s investment performance.

- *Repurchase agreements, purchase and sale contracts risk* – If the other party to a repurchase agreement or purchase and sale contract defaults on its obligation under the agreement, the Fund may suffer delays and incur costs or lose money in exercising its rights under the agreement. If the seller fails to repurchase the security under a repurchase agreement or purchase and sale contract, and the market value of the security declines, the Fund may lose money.
- *U.S. Government securities risk* – Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer’s obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund’s performance from year to year and by showing how the Fund’s average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund’s past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Prior to September 19, 2016, the Fund was operated as a prime money market fund.

Effective September 19, 2016, the Fund operates as a government money market fund and, as such, invests at least 99.5% of its total assets in cash, government securities and/or repurchase agreements that are “collateralized fully” (i.e., backed by cash or government securities).

The 7-day yield of Class A on December 31, 2019, was 1.10%.

Annual Total Returns as of December 31

Portfolio Management.

Investment Adviser to the Fund:
Jackson National Asset Management, LLC ("JNAM")

Sub-Adviser:
Wellington Management Company LLP ("Wellington Management")

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/WMC Value Fund
Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- *Mailing in the postage-paid card on the cover of this report;*
- *Calling 1-866-349-4564; or*
- *Signing up on* www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is long-term growth of capital.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees
(fees paid directly from your investment)
Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.38%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses[1]	0.10%
Total Annual Fund Operating Expenses	0.78%

[1] "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a $10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/WMC Value Fund Class A			
1 year	3 years	5 years	10 years
$80	$249	$433	$966

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	49%

Principal Investment Strategies. The Fund seeks to meet its objective by investing under normal circumstances at least 65% of its total assets in common stocks of domestic companies. Although the Fund may invest in companies with a broad range of market capitalizations, the Fund will tend to focus on companies with large market capitalizations (generally above $10 billion). Using a value approach, the Fund seeks to invest in stocks that Wellington Management Company LLP ("Sub-Adviser") believes are underpriced relative to other stocks.

The Fund may invest up to 20% of its total assets in the securities of foreign issuers.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Accounting risk* – The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- *Company risk* **–** Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Financial services risk* – An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- *Foreign regulatory risk* – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available

information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.

- *Investment style risk* – The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Large-capitalization investing risk* – Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Stock risk* – Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Annual Total Returns as of December 31

Class A

Best Quarter (ended 12/31/2011): 13.49%; **Worst Quarter (ended 9/30/2011):** -17.27%

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Goldman Sachs Competitive Advantage Fund

(formerly, JNL/S&P Competitive Advantage Fund)

Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- *Mailing in the postage-paid card on the cover of this report;*
- *Calling 1-866-349-4564; or*
- *Signing up on www.jackson.com*

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees
(fees paid directly from your investment)
Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.26%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses[1]	0.10%
Total Annual Fund Operating Expenses	0.66%

1 "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a $10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Goldman Sachs Competitive Advantage Fund Class A			
1 year	3 years	5 years	10 years
$67	$211	$368	$822

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	43%

Portfolio turnover for the period of January 1, 2019 to June 30, 2019 is from the prior sub-adviser, Standard & Poor's Investment Advisory Services LLC.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in the stock of anywhere from 30 to 90 distinct companies (generally ranging from 35 to 50 distinct companies) included in the S&P 500® Index that are believed to have superior profitability, as measured by return on invested capital, and trade at relatively attractive valuations. Goldman Sachs Asset Management, L.P. ("GSAM") excludes stocks it views as lower quality using the S&P Quality Rankings. GSAM will choose only one share class of a company to be represented in the Fund if the stock selection model selects multiple share classes of the same company.

The Fund is comprised of three distinct sub-portfolios, each of which selects 30 company names and rebalances on a separate date. The 30 names included in a sub-portfolio could overlap with some or all of the names in any of the other sub-portfolios. The sub-portfolios separately are selected and rebalance on or about the first business day of March, September or December of each year. Additionally, on or about the first business day of December of each year, the Fund rebalances the size of the three separate sub-portfolios to ensure equal weighting of the sub-portfolios. GSAM and Mellon Investments Corporation (collectively, "Sub-Advisers") generally use a buy and hold strategy, executing trades only on or around each stock selection date, when cash flow activity occurs in the Fund and for dividend reinvestment purposes.

S&P Quality Rankings

Growth and stability of earnings and dividends are deemed key elements in establishing earnings and dividend rankings for common stocks. This process also takes into consideration certain adjustments and modifications deemed desirable in establishing such rankings. The final score for each stock is measured against a scoring matrix determined by an internal analysis of the scores of a large and representative sample of stocks. The range of scores in the array of this sample has been aligned with the following ladder of rankings:

A+	Highest	B-	Lower
A	High	C	Lowest
A-	Above Average	D	In Reorganization
B+	Average	NR	Not Ranked
B	Below Average		

Certain provisions of the Investment Company Act of 1940, as amended ("1940 Act"), and other U.S. "Federal Securities Laws" may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations. The 1940 Act and other Federal Securities Laws may also limit or prohibit the Funds from making certain investments.

The Fund may invest in a combination of exchange-traded funds ("ETFs") to assist with fund rebalances and to meet redemption or purchase requests.

The Fund may invest in financial futures, a type of derivative, to obtain market exposure consistent with the Fund's investment objective and strategies, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Accounting risk* – The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- *Company risk* **–** Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Model risk* – The Fund bears the risk that the proprietary quantitative models used by the portfolio managers will not be successful in identifying securities that will help the Fund achieve its investment objectives, which may cause the Fund to underperform its benchmark or other funds with a similar investment objective.
- *Stock risk* – Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- *Concentration risk* **–** The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Sector risk* – Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- *Investment style risk* – The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Large-capitalization investing risk* – Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- *Limited management, trading cost and rebalance risk* **–** Investing primarily according to specific, mechanical criteria applied on a specific date each year may prevent a Fund from responding to market fluctuations or changes in the financial condition or business prospects of the selected companies during the year.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- *Financial services risk* – An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- *Regulatory investment limits risk* – The U.S. "Federal Securities Laws" may limit the amount a Fund may invest in certain securities. These limits may be Fund specific or they may apply to the investment manager. As a result of these regulatory

limitations under the Federal Securities Laws, and the asset management and financial industry business activities of the investment manager and its affiliates, the investment manager and the Funds may be prohibited from or limited in effecting transactions in certain securities. The investment manager and the Fund may encounter trading limitations or restrictions because of aggregation issues or other regulatory requirements. The Federal Securities Laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These regulatory investment limits may increase the Fund's expenses and may limit the Fund's performance.

- *Securities lending risk* – Securities lending involves the risk of loss or delays in recovery of the loaned securities or loss of rights in the collateral if the borrower fails to return the security loaned or becomes insolvent.
- *Derivatives risk* **–** Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- *Exchange-traded funds investing risk* – An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- *Forward and futures contract risk* – The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- *Passive investment risk* – The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance prior to July 1, 2019 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Consistent with the Fund's principal investment strategies, the Fund uses the S&P 500 Equal Weight Index as the Fund's secondary benchmark.

Annual Total Returns as of December 31

Class A

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Goldman Sachs Dividend Income & Growth Fund

(formerly, JNL/S&P Dividend Income & Growth Fund)

Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- *Mailing in the postage-paid card on the cover of this report;*
- *Calling 1-866-349-4564; or*
- *Signing up on www.jackson.com*

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is primarily capital appreciation with a secondary focus on current income.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees
(fees paid directly from your investment)
Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.25%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses[1]	0.10%
Total Annual Fund Operating Expenses	0.65%

[1] "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a $10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Goldman Sachs Dividend Income & Growth Fund Class A			
1 year	3 years	5 years	10 years
$66	$208	$362	$810

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	41%

Portfolio turnover for the period of January 1, 2019 to June 30, 2019 is from the prior sub-adviser, Standard & Poor's Investment Advisory Services LLC.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in the stock of anywhere from 33 to 99 distinct companies (generally ranging from 35 to 50 distinct companies) included in the S&P 500® Index that have attractive dividend yields and strong capital structures as determined by Goldman Sachs Asset Management, L.P. ("GSAM"). The holdings in the portfolio are selected from all 11 sectors of the economy identified in the S&P 500 Index. GSAM will choose only one share class of a company to be represented in the Fund if the stock selection model selects multiple share classes of the same company.

GSAM incorporates S&P Quality Rankings and S&P Global Ratings Issuer Credit Ratings in the selection process.

The Fund is comprised of three distinct sub-portfolios, each of which selects 33 company names and rebalances on a separate date. The 33 names included in a sub-portfolio could overlap with some or all of the names in any of the other sub-portfolios. The sub-portfolios separately are selected and rebalance on or about the first business day of March, September or December of each year. Additionally, on or about the first business day of December of each year, the Fund rebalances the size of the three separate sub-portfolios to ensure equal weighting of the sub-portfolios. GSAM and Mellon Investments Corporation (collectively, "Sub-Advisers") generally use a buy and hold strategy, executing trades only on or around each stock selection date, when cash flow activity occurs in the Fund and for dividend reinvestment purposes.

S&P Quality Rankings

Growth and stability of earnings and dividends are deemed key elements in establishing earnings and dividend rankings for common stocks. This process also takes into consideration certain adjustments and modifications deemed desirable in establishing such rankings. The final score for each stock is measured against a scoring matrix determined by an internal analysis of the scores of a large and representative sample of stocks. The range of scores in the array of this sample has been aligned with the following ladder of rankings:

A+	Highest	B-	Lower
A	High	C	Lowest
A-	Above Average	D	In Reorganization
B+	Average	NR	Not Ranked
B	Below Average		

S&P Global Ratings Issuer Credit Ratings

S&P Global Ratings Issuer Credit Ratings (also known as credit ratings) express opinions about the ability and willingness of an issuer to meet its financial obligations in full and on time. Credit ratings can also be used to determine the credit quality of an individual debt issue, such a corporate or municipal bond, and the relative likelihood that the issue may default. Credit ratings are not an absolute measure of default probability, since there are future events that cannot be foreseen. Credit ratings are not intended as guarantees of credit quality or as exact measures of the probability that a particular issuer or debt issue will default.

S&P Global Ratings Issuer Credit Ratings opinions are based on analysis by experienced professionals who evaluate and interpret information received from issuers and other available sources to form a considered opinion. S&P Global Ratings analysts obtain information from public reports, as well as from interviews and discussions with the issuer's management. They use that information and apply their analytical judgment to assess the entity's financial condition, operation performance, policies and risk management strategies.

Certain provisions of the Investment Company Act of 1940, as amended ("1940 Act"), and other U.S. "Federal Securities Laws" may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations. The 1940 Act and other Federal Securities Laws may also limit or prohibit the Funds from making certain investments.

The Fund may lend its securities to increase its income.

The Fund may invest in a combination of exchange-traded funds ("ETFs") to assist with fund rebalances and to meet redemption or purchase requests.

The Fund may invest in financial futures, a type of derivative, to obtain market exposure consistent with the Fund's investment objective and strategies, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Accounting risk* – The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- *Company risk* **–** Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Model risk* – The Fund bears the risk that the proprietary quantitative models used by the portfolio managers will not be successful in identifying securities that will help the Fund achieve its investment objectives, which may cause the Fund to underperform its benchmark or other funds with a similar investment objective.
- *Stock risk* – Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- *Concentration risk* **–** The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Sector risk* – Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- *Investment style risk* – The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Large-capitalization investing risk* – Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.

- *Limited management, trading cost and rebalance risk* – Investing primarily according to specific, mechanical criteria applied on a specific date each year may prevent a Fund from responding to market fluctuations or changes in the financial condition or business prospects of the selected companies during the year.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- *Financial services risk* – An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- *Regulatory investment limits risk* – The U.S. "Federal Securities Laws" may limit the amount a Fund may invest in certain securities. These limits may be Fund specific or they may apply to the investment manager. As a result of these regulatory limitations under the Federal Securities Laws, and the asset management and financial industry business activities of the investment manager and its affiliates, the investment manager and the Funds may be prohibited from or limited in effecting transactions in certain securities. The investment manager and the Fund may encounter trading limitations or restrictions because of aggregation issues or other regulatory requirements. The Federal Securities Laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These regulatory investment limits may increase the Fund's expenses and may limit the Fund's performance.
- *Securities lending risk* – Securities lending involves the risk of loss or delays in recovery of the loaned securities or loss of rights in the collateral if the borrower fails to return the security loaned or becomes insolvent.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- *Exchange-traded funds investing risk* – An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- *Forward and futures contract risk* – The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- *Passive investment risk* – The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.

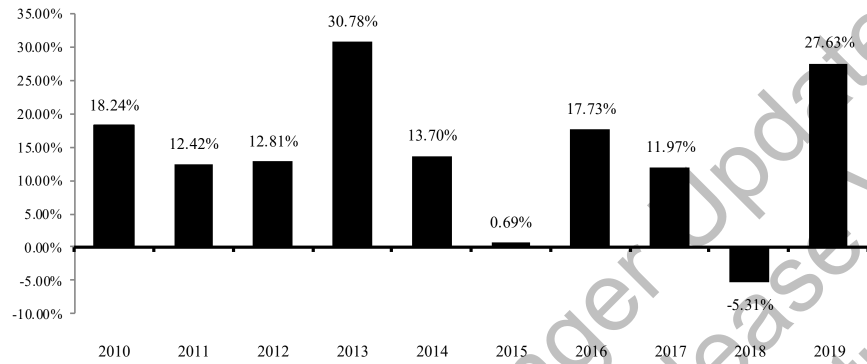
Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance prior to July 1, 2019 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Consistent with the Fund's principal investment strategies, the Fund uses the S&P 500 Value Index as the Fund's secondary benchmark.

Annual Total Returns as of December 31

Class A



Best Quarter (ended 3/31/2013): 13.78%; **Worst Quarter (ended 12/31/2018):** -10.03%

Portfolio Management.

Investment Adviser to the Fund:
Jackson National Asset Management, LLC ("JNAM")

Sub-Advisers:
Goldman Sachs Asset Management, L.P. ("GSAM")
Mellon Investments Corporation ("Mellon")

Portfolio Managers:

Name:	Joined Fund Management Team In:	Title:
Marcus Ng, CFA	July 2019	Vice President, GSAM
Nicholas Chan, CFA	July 2019	Managing Director, GSAM
Karen Q. Wong, CFA	2007	Managing Director, Head of Index – Portfolio Management, Mellon
Richard A. Brown, CFA	2007	Managing Director, Co-Head of Equity Indexing – Portfolio Management, Mellon
Thomas J. Durante, CFA	2010	Managing Director, Co-Head of Equity Indexing – Portfolio Management, Mellon

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Goldman Sachs Intrinsic Value Fund
(formerly, JNL/S&P Intrinsic Value Fund)
Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- *Mailing in the postage-paid card on the cover of this report;*
- *Calling 1-866-349-4564; or*
- *Signing up on* www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees
(fees paid directly from your investment)
Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.26%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses[1]	0.10%
Total Annual Fund Operating Expenses	0.66%

[1] "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a $10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Goldman Sachs Intrinsic Value Fund Class A			
1 year	3 years	5 years	10 years
$67	$211	$368	$822

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	59%

Portfolio turnover for the period of January 1, 2019 to June 30, 2019 is from the prior sub-adviser, Standard & Poor's Investment Advisory Services LLC.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in the stock of anywhere from 30 to 90 distinct companies (generally ranging from 45 to 60 distinct companies) included in the S&P 500® Index that generate strong free cash flows and sell at relatively attractive valuations. Goldman Sachs Asset Management, L.P. ("GSAM") will choose only one share class of a company to be represented in the Fund if the stock selection model selects multiple share classes of the same company.

GSAM excludes companies in the Financials sector from the selection. GSAM incorporates S&P Quality Rankings and S&P Global Ratings Issuer Credit Ratings in the selection process.

The Fund is comprised of three distinct sub-portfolios, each of which selects 30 company names and rebalances on a separate date. The 30 names included in a sub-portfolio could overlap with some or all of the names in any of the other sub-portfolios. The sub-portfolios separately are selected and rebalance on or about the first business day of March, September or December of each year. Additionally, on or about the first business day of December of each year, the Fund rebalances the size of the three separate sub-portfolios to ensure equal weighting of the sub-portfolios. GSAM and Mellon Investments Corporation (collectively, "Sub-Advisers") generally use a buy and hold strategy, executing trades only on or around each stock selection date, when cash flow activity occurs in the Fund and for dividend reinvestment purposes.

S&P Quality Rankings

Growth and stability of earnings and dividends are deemed key elements in establishing earnings and dividend rankings for common stocks. This process also takes into consideration certain adjustments and modifications deemed desirable in establishing such rankings. The final score for each stock is measured against a scoring matrix determined by an internal analysis of the scores of a large and representative sample of stocks. The range of scores in the array of this sample has been aligned with the following ladder of rankings:

A+	Highest	B-	Lower
A	High	C	Lowest
A-	Above Average	D	In Reorganization
B+	Average	NR	Not Ranked
B	Below Average		

S&P Global Ratings Issuer Credit Ratings

S&P Global Ratings Issuer Credit Ratings (also known as credit ratings) express opinions about the ability and willingness of an issuer to meet its financial obligations in full and on time. Credit ratings can also be used to determine the credit quality of an individual debt issue, such a corporate or municipal bond, and the relative likelihood that the issue may default. Credit ratings are not an absolute measure of default probability, since there are future events that cannot be foreseen. Credit ratings are not intended as guarantees of credit quality or as exact measures of the probability that a particular issuer or debt issue will default.

S&P Global Ratings Issuer Credit Ratings opinions are based on analysis by experienced professionals who evaluate and interpret information received from issuers and other available sources to form a considered opinion. S&P Global Ratings Standard & Poor's Ratings Services analysts obtain information from public reports, as well as from interviews and discussions with the issuer's management. They use that information and apply their analytical judgement to assess the entity's financial condition, operation performance, policies and risk management strategies.

Certain provisions of the Investment Company Act of 1940, as amended ("1940 Act"), and other U.S. "Federal Securities Laws" may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations. The 1940 Act and other Federal Securities Laws may also limit or prohibit the Funds from making certain investments.

The Fund may invest in a combination of exchange-traded funds ("ETFs') to assist with fund rebalances and to meet redemption and purchase requests.

The Fund may invest in financial futures, a type of derivative, to obtain market exposure consistent with the Fund's objective and strategies, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Accounting risk* – The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- *Company risk* **–** Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Model risk* – The Fund bears the risk that the proprietary quantitative models used by the portfolio managers will not be successful in identifying securities that will help the Fund achieve its investment objectives, which may cause the Fund to underperform its benchmark or other funds with a similar investment objective.
- *Stock risk* – Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- *Concentration risk* **–** The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Sector risk* – Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- *Investment style risk* – The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Large-capitalization investing risk* – Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.

- *Limited management, trading cost and rebalance risk* **–** Investing primarily according to specific, mechanical criteria applied on a specific date each year may prevent a Fund from responding to market fluctuations or changes in the financial condition or business prospects of the selected companies during the year.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- *Portfolio turnover risk* **–** Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- *Financial services risk* – An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- *Regulatory investment limits risk* – The U.S. "Federal Securities Laws" may limit the amount a Fund may invest in certain securities. These limits may be Fund specific or they may apply to the investment manager. As a result of these regulatory limitations under the Federal Securities Laws, and the asset management and financial industry business activities of the investment manager and its affiliates, the investment manager and the Funds may be prohibited from or limited in effecting transactions in certain securities. The investment manager and the Fund may encounter trading limitations or restrictions because of aggregation issues or other regulatory requirements. The Federal Securities Laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These regulatory investment limits may increase the Fund's expenses and may limit the Fund's performance.
- *Securities lending risk* – Securities lending involves the risk of loss or delays in recovery of the loaned securities or loss of rights in the collateral if the borrower fails to return the security loaned or becomes insolvent.
- *Derivatives risk* **–** Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- *Exchange-traded funds investing risk* – An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- *Forward and futures contract risk* – The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- *Passive investment risk* – The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance prior to July 1, 2019 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Consistent with the Fund's principal investment strategies, the Fund uses the S&P 500 Value Index as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Goldman Sachs Total Yield Fund
(formerly, JNL/S&P Total Yield Fund)
Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees
(fees paid directly from your investment)
Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.26%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses[1]	0.11%
Total Annual Fund Operating Expenses	0.67%

[1] "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a $10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Goldman Sachs Total Yield Fund Class A			
1 year	3 years	5 years	10 years
$68	$214	$373	$835

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	83%

Portfolio turnover for the period of January 1, 2019 to June 30, 2019 is from the prior sub-adviser, Standard & Poor's Investment Advisory Services LLC.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in the stock of anywhere from 30 to 90 distinct companies (generally ranging from 40 to 65 distinct companies) included in the S&P 500® Index that generate positive cash flow and have a strong track record, as determined by Goldman Sachs Asset Management, L.P. ("GSAM") of returning cash to investors, such as through dividends, share repurchases or debt retirement.

GSAM excludes companies in the Banks and Utilities subsectors. GSAM incorporates positive profits measures and S&P Quality Rankings in its selection process. GSAM will choose only one share class of a company to be represented in the Fund if the stock selection model selects multiple share classes of the same company.

The Fund is comprised of three distinct sub-portfolios, each of which selects 30 company names and rebalances on a separate date. The 30 names included in a sub-portfolio could overlap with some or all of the names in any of the other sub-portfolios. The sub-portfolios separately are selected and rebalance on or about the first business day of March, September or December of each year. Additionally, on or about the first business day of December of each year, the Fund rebalances the size of the three separate sub-portfolios to ensure equal weighting of the sub-portfolios. GSAM and Mellon Investments Corporation (collectively, "Sub-Advisers") generally use a buy and hold strategy, executing trades only on or around each stock selection date, when cash flow activity occurs in the Fund and for dividend reinvestment purposes.

S&P Quality Rankings

Growth and stability of earnings and dividends are deemed key elements in establishing earnings and dividend rankings for common stocks. This process also takes into consideration certain adjustments and modifications deemed desirable in establishing such rankings. The final score for each stock is measured against a scoring matrix determined by an internal analysis of the scores of a large and representative sample of stocks. The range of scores in the array of this sample has been aligned with the following ladder of rankings:

A+	Highest	B-	Lower
A	High	C	Lowest
A-	Above Average	D	In Reorganization
B+	Average	NR	Not Ranked
B	Below Average		

Certain provisions of the Investment Company Act of 1940, as amended ("1940 Act"), and other U.S. "Federal Securities Laws" may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations. The 1940 Act and other Federal Securities Laws may also limit or prohibit the Funds from making certain investments.

The Fund may lend its securities to increase its income.

The Fund may invest in a combination of exchange-traded funds ("ETFs") to assist with fund rebalances and to meet redemption or purchase requests.

The Fund may invest in financial futures, a type of derivative, to obtain market exposure consistent with the Fund's objective and strategies, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Accounting risk* – The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- *Company risk* **–** Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Model risk* – The Fund bears the risk that the proprietary quantitative models used by the portfolio managers will not be successful in identifying securities that will help the Fund achieve its investment objectives, which may cause the Fund to underperform its benchmark or other funds with a similar investment objective.
- *Stock risk* – Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- *Concentration risk* **–** The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Sector risk* – Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- *Investment style risk* – The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Large-capitalization investing risk* – Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- *Limited management, trading cost and rebalance risk* **–** Investing primarily according to specific, mechanical criteria applied on a specific date each year may prevent a Fund from responding to market fluctuations or changes in the financial condition or business prospects of the selected companies during the year.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- *Portfolio turnover risk* **–** Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.

- *Financial services risk* – An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- *Regulatory investment limits risk* – The U.S. "Federal Securities Laws" may limit the amount a Fund may invest in certain securities. These limits may be Fund specific or they may apply to the investment manager. As a result of these regulatory limitations under the Federal Securities Laws, and the asset management and financial industry business activities of the investment manager and its affiliates, the investment manager and the Funds may be prohibited from or limited in effecting transactions in certain securities. The investment manager and the Fund may encounter trading limitations or restrictions because of aggregation issues or other regulatory requirements. The Federal Securities Laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These regulatory investment limits may increase the Fund's expenses and may limit the Fund's performance.
- *Securities lending risk* – Securities lending involves the risk of loss or delays in recovery of the loaned securities or loss of rights in the collateral if the borrower fails to return the security loaned or becomes insolvent.
- *Derivatives risk* **–** Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- *Exchange-traded funds investing risk* – An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- *Forward and futures contract risk* – The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- *Passive investment risk* – The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.

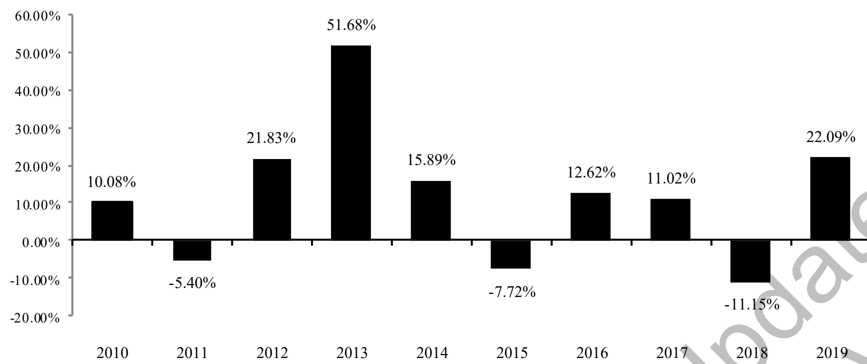
Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance prior to July 1, 2019 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Consistent with the Fund's principal investment strategies, the Fund uses the S&P 500 Value Index as the Fund's secondary benchmark.

Annual Total Returns as of December 31

Class A



Best Quarter (ended 3/31/2013): 16.99%; **Worst Quarter (ended 9/30/2011):** -20.65%

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Goldman Sachs International 5 Fund
(formerly, JNL/S&P International 5 Fund)
Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- *Mailing in the postage-paid card on the cover of this report;*
- *Calling 1-866-349-4564; or*
- *Signing up on www.jackson.com*

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees
(fees paid directly from your investment)
Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.30%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses[1]	0.15%
Total Annual Fund Operating Expenses	0.75%

[1] "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a $10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Goldman Sachs International 5 Fund Class A			
1 year	3 years	5 years	10 years
$77	$240	$417	$930

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	53%

Portfolio turnover for the period of January 1, 2019 to June 30, 2019 is from the prior sub-adviser, Standard & Poor's Investment Advisory Services LLC.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in the stocks of foreign companies located in developed countries throughout the world, excluding the United States, that are identified through a disciplined, rules-based investment process. The Fund allocates all of its net assets among the underlying regional strategies listed below:

S&P Asia Pac Ex Japan Strategy – This strategy focuses on companies located in developed countries in the Asia-Pacific (excluding Japan) geographic region that have delivered attractive cash returns to shareholders while seeking to avoid companies with less attractive profitability.

S&P Canada Strategy – This strategy focuses on companies located in Canada that the Sub-Adviser believes to have attractive free cash flows in relation to equity market capitalization while seeking to avoid companies that the Sub-Adviser believes have undergone unattractive changes to capital structure.

S&P Europe Strategy –This strategy focuses on companies located in Western Europe that the Sub-Adviser believes have above average free cash flows in relation to equity market valuation and attractive price momentum.

S&P Japan Strategy – This strategy focuses on companies located in Japan that the Sub-Adviser believes have attractive dividend yields while attempting to avoid overpaying through valuation metrics.

S&P Middle East Strategy – This strategy seeks to achieve capital appreciation by investing liquidity weighted allocations to the common stock of approximately 10% of the companies in the S&P Developed Middle East & Africa LargeMid® Index that the Sub-Adviser believes to be the most attractive. The Sub-Adviser defines attractive stocks as those with the strongest Free Cash Flow Yield, and either above average profitability or favorable price momentum. S&P Quality Rankings are used to exclude companies with the lower quality, helping to filter those that may look attractive on a capital appreciation basis but may have longer term low quality characteristics.

While each of these underlying regional strategies seeks to provide capital appreciation, each underlying regional strategy follows a different principal investment strategy.

Each of the underlying regional strategies invests by selecting from the stock of companies included in a corresponding regional index, each of which is a sub-index of the S&P Developed Ex-U.S. LargeMid Index. The S&P Developed Ex-U.S. LargeMid Index measures the performance of companies located in developed countries around the world, excluding the United States. As of December 31, 2019, the range of market capitalizations of companies included in the index was between $365.23 million and $321.96 billion. The size of companies in the S&P Developed Ex-U.S. LargeMid Index changes with market conditions, which can result in changes to the market capitalization range of companies in the index.

The securities for each underlying regional strategy are selected only once annually on each stock selection date. The Fund is rebalanced annually between each of the above specialized strategies on or the first business day of March.

Goldman Sachs Asset Management, L.P. ("GSAM") and Mellon Investments Corporation ("Sub-Advisers") generally use a buy and hold strategy, trading only on or around each stock selection date, when cash flow activity occurs, and for dividend reinvestment purposes. The Sub-Advisers may also trade for mergers if the original stock included in the Fund's portfolio is not the surviving company.

The Fund may invest in a combination of exchange-traded funds ("ETFs") to assist with fund rebalances and to meet redemption or purchase requests.

The Fund may invest in financial futures, a type of derivative, to obtain market exposure consistent with the Fund's investment objective and strategies, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the

Fund's objective. In addition, the Fund may use foreign currency forward contracts, a type of derivative, to maintain appropriate currency exposures.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Accounting risk* – The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- *Company risk* **–** Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- *Stock risk* – Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Model risk* – The Fund bears the risk that the proprietary quantitative models used by the portfolio managers will not be successful in identifying securities that will help the Fund achieve its investment objectives, which may cause the Fund to underperform its benchmark or other funds with a similar investment objective.
- *Limited management, trading cost and rebalance risk* **–** Investing primarily according to specific, mechanical criteria applied on a specific date each year may prevent a Fund from responding to market fluctuations or changes in the financial condition or business prospects of the selected companies during the year.
- *Currency risk* **–** Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Mid-capitalization investing risk* **–** The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- *Foreign regulatory risk* – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the

costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.

- *European investment risk* – Investing in Europe involves many of the same risks as investing in foreign securities. In addition, since Europe includes both developed and emerging markets, investments by the Fund will be subject to the risks associated with investments in such markets. Performance is expected to be closely tied to social, political, and economic conditions within Europe and to be more volatile than the performance of more geographically diversified funds. Additionally, the United Kingdom's withdrawal from the EU, commonly known as "Brexit," may have significant political and financial consequences for Eurozone markets, including greater market volatility and illiquidity, currency fluctuations, deterioration in economic activity, a decrease in business confidence and an increased likelihood of a recession in the United Kingdom and the EU. The withdrawal agreement entered into between the United Kingdom and the EU entered into force on January 31, 2020, at which time the United Kingdom ceased to be a member of the EU. Following the withdrawal, there will be an eleven-month transition period, ending December 31, 2020, during which the United Kingdom will negotiate its future relationship with the EU. Brexit has already resulted in significant volatility in European and global financial markets and uncertainty about the integrity and functioning of the EU, both of which may persist for an extended period of time.
- *Portfolio turnover risk* **–** Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- *Pacific Rim investing risk* – The Pacific Rim economies are in various stages of economic development. Many of the Pacific Rim economies may be intertwined, so they may experience recessions at the same time. Furthermore, many of the Pacific Rim economies are characterized by high inflation, undeveloped financial services sectors, heavy reliance on international trade, frequent currency fluctuations, devaluations, or restrictions, political and social instability, and less efficient markets. If the Fund concentrates investments in Pacific Rim markets, the Fund's performance is expected to be closely tied to social, political, and economic conditions within the Pacific Rim region and to be more volatile than the performance of more geographically diversified funds.
- *Financial services risk* – An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- *Derivatives risk* **–** Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- *Exchange-traded funds investing risk* – An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- *Forward and futures contract risk* – The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- *Passive investment risk* – The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance prior to July 1, 2019 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Annual Total Returns as of December 31

Class A

Best Quarter (ended 6/30/2017): 11.87%; **Worst Quarter (ended 12/31/2018):** -11.97%

Average Annual Total Returns as of 12/31/2019

	1 year	5 year	Life of Fund (September 15, 2014)
JNL/Goldman Sachs International 5 Fund (Class A)	17.82%	7.03%	5.51%

Portfolio Management.

Investment Adviser to the Fund:
Jackson National Asset Management, LLC ("JNAM")

Sub-Advisers:
Goldman Sachs Asset Management, L.P. ("GSAM")
Mellon Investments Corporation ("Mellon")

Portfolio Managers:

Name:	Joined Fund Management Team In:	Title:
Marcus Ng, CFA	July 2019	Vice President, GSAM
Nicholas Chan, CFA	July 2019	Managing Director, GSAM
Karen Q. Wong, CFA	April 2014	Managing Director, Head of Index – Portfolio Management, Mellon
Richard A. Brown, CFA	April 2014	Managing Director, Co-Head of Equity Indexing – Portfolio Management, Mellon
Thomas J. Durante, CFA	April 2014	Managing Director, Co-Head of Equity Indexing – Portfolio Management, Mellon

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Goldman Sachs 4 Fund
(formerly, JNL/S&P 4 Fund)
Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- *Mailing in the postage-paid card on the cover of this report;*
- *Calling 1-866-349-4564; or*
- *Signing up on* www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees
(fees paid directly from your investment)
Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.00%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses[1]	0.05%
Acquired Fund Fees and Expenses[2]	0.36%
Total Annual Fund Operating Expenses	0.71%

[1] "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
[2] Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a $10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Goldman Sachs 4 Fund Class A			
1 year	3 years	5 years	10 years
$73	$227	$395	$883

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	11%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of the following Funds ("Underlying Funds"):

- 25% in the JNL/Goldman Sachs Competitive Advantage Fund;
- 25% in the JNL/Goldman Sachs Dividend Income & Growth Fund;
- 25% in the JNL/Goldman Sachs Intrinsic Value Fund; and
- 25% in the JNL/Goldman Sachs Total Yield Fund.

Under all market conditions, the Fund seeks to maintain the aforementioned target weights to the Underlying Funds, although market movements may result in some variance around the target weights. The daily flows in and out of the Fund are allocated in a manner to help minimize dispersion from the target weights of the Underlying Funds.

The investment policies and risks of the Underlying Funds are further described elsewhere in this Prospectus. It should be noted that the Fund's investment objective and investment strategies remain constant regardless of which Underlying Funds the Fund is invested in.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- *Allocation risk* – The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes of Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.
- *Underlying funds risk* – The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Mid-capitalization and small-capitalization investing risk* – The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.

- *Investment in other investment companies risk* – As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited**.**
- *Investment style risk* – The returns from a certain investment style may be lower than the returns from the overall stock market. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Model risk* – The Fund bears the risk that the proprietary quantitative models used by the portfolio managers will not be successful in identifying securities that will help the Fund achieve its investment objectives, which may cause the Fund to underperform its benchmark or other funds with a similar investment objective.
- *Limited management, trading cost and rebalance risk* **–** Investing primarily according to specific, mechanical criteria applied on a specific date each year may prevent a Fund from responding to market fluctuations or changes in the financial condition or business prospects of the selected companies during the year.

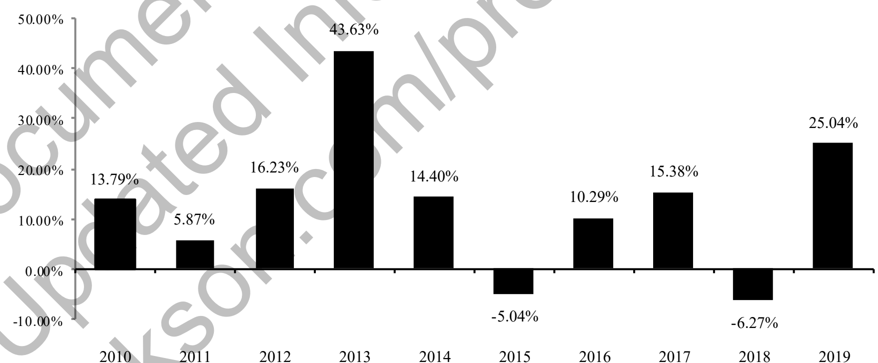
Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Consistent with the Fund's principal investment strategies, the Fund uses the S&P 500 Value Index as the Fund's secondary benchmark.

Annual Total Returns as of December 31

Class A



Best Quarter (ended 3/31/2013): 14.92%; **Worst Quarter (ended 12/31/2018):** -13.91%

Average Annual Total Returns as of 12/31/2019

	1 year	**5 year**	**10 year**
JNL/Goldman Sachs 4 Fund (Class A)	25.04%	7.21%	12.54%
S&P 500 Index (reflects no deduction for fees, expenses, or taxes)	31.49%	11.70%	13.56%

Portfolio Management.

Investment Adviser to the Fund:
Jackson National Asset Management, LLC ("JNAM")

Portfolio Managers:

Name:	Joined Fund Management Team In:	Title:
William Harding, CFA	November 2012	Senior Vice President, Chief Investment Officer and Portfolio Manager, JNAM
Sean Hynes, CFA, CAIA	April 2014	Assistant Vice President and Portfolio Manager, JNAM
Mark Pliska, CFA	April 2014	Portfolio Manager, JNAM

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Goldman Sachs Managed Conservative Fund
(formerly, JNL/S&P Managed Conservative Fund)
Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- *Mailing in the postage-paid card on the cover of this report;*
- *Calling 1-866-349-4564; or*
- *Signing up on* www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objectives. The investment objective of the Fund is to seek current income. Capital growth is a secondary objective.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees
(fees paid directly from your investment)
Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.10%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses[1]	0.05%
Acquired Fund Fees and Expenses[2]	0.66%
Total Annual Fund Operating Expenses	1.11%

[1] "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
[2] Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a $10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Goldman Sachs Managed Conservative Fund Class A			
1 year	3 years	5 years	10 years
$113	$353	$612	$1,352

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	19%

Portfolio turnover for the period of January 1, 2019 to June 30, 2019 is from the prior sub-adviser, Standard & Poor's Investment Advisory Services LLC.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds ("Underlying Funds"). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust and JNL Investors Series Trust. Not all Funds of the JNL Series Trust and JNL Investors Series Trust are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates approximately 10% to 30% of its assets to Underlying Funds that invest primarily in equity securities, 70% to 90% to Underlying Funds that invest primarily in fixed-income securities and 0% to 30% to Underlying Funds that invest primarily in money market securities.

The Fund groups the Underlying Funds according to investment categories set forth below:

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-income
- International
- International Fixed-Income
- Sector
- Tactical Management

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, Sector, and Specialty investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Risk Management and Tactical Management investment categories include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund's exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund's relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies. The Fund does not anticipate investing significant amounts in the alternative categories.

In determining allocations to any particular Underlying Fund, the Fund's investment adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

The Fund does not take direct positions in asset-backed securities, mortgage-backed securities or junk bonds. Through the implementation of the Fund's asset allocation model, the Fund may seek exposure to asset-backed securities, mortgage-backed securities or junk bonds by purchasing shares of mutual funds that may have direct or indirect exposure to these asset classes. Consequently, the risks to the Fund are limited to the risks associated with investing in mutual funds that have investments in these asset classes. The principal risks to investing in the Fund, including those that may arise from indirect exposure to asset-backed securities, mortgage-backed securities or junk bonds are detailed in the "Principal Risks of Investing" and "Glossary of Risks" sections of the Fund's prospectus.

In addition, while the Fund will generally not invest in Underlying Funds that are sub-advised by Goldman Sachs Asset Management, L.P. ("GSAM") or an affiliate of GSAM (each an "Affiliated Underlying Fund"), it may invest in an Affiliated Underlying Fund over other Underlying Funds when the Affiliated Underlying Fund is the only option available under the Fund's asset allocation model.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- *Allocation risk* – The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.
- *Underlying funds risk* – The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Mid-capitalization investing risk* – The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- *Small-capitalization investing risk* – Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds

are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.

- *Mortgage-related and other asset-backed securities risk* – Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *U.S. Government securities risk* – Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject an Underlying Fund to counterparty risk.
- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Foreign regulatory risk* – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance prior to on or about July 1, 2019 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Conservative Index with the Morningstar Conservative Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 80% Bloomberg Barclays U.S. Aggregate Bond Index, 15% S&P 500 Index, 5% MSCI EAFE Index (Net) as the Fund's secondary benchmark.

Christopher Lvoff, CFA, ASA	July 2019	Managing Director, GSAM

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Goldman Sachs Managed Moderate Fund

(formerly, JNL/S&P Managed Moderate Fund)

Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- *Mailing in the postage-paid card on the cover of this report;*
- *Calling 1-866-349-4564; or*
- *Signing up on* www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is current income and capital growth.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees
(fees paid directly from your investment)
Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.09%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses[1]	0.05%
Acquired Fund Fees and Expenses[2]	0.68%
Total Annual Fund Operating Expenses	1.12%

1 "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
2 Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a $10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Goldman Sachs Managed Moderate Fund Class A			
1 year	3 years	5 years	10 years
$114	$356	$617	$1,363

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	16%

Portfolio turnover for the period of January 1, 2019 to June 30, 2019 is from the prior sub-adviser, Standard & Poor's Investment Advisory Services LLC.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds ("Underlying Funds"). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust and JNL Investors Series Trust. Not all Funds of the JNL Series Trust and JNL Investors Series Trust are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates approximately 30% to 50% of its assets to Underlying Funds that invest primarily in equity securities, 50% to 70% to Underlying Funds that invest primarily in fixed-income securities and 0-25% to Underlying Funds that invest primarily in money market securities.

The Fund groups the Underlying Funds according to investment categories set forth below:

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-income
- International
- International Fixed-Income
- Sector
- Tactical Management

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, Sector, and Specialty investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Risk Management and Tactical Management investment categories include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund's exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund's relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies. The Fund does not anticipate investing significant amounts in the alternative categories.

In determining allocations to any particular Underlying Fund, the Fund's investment adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

The Fund does not take direct positions in asset-backed securities, mortgage-backed securities or junk bonds. Through the implementation of the Fund's asset allocation model, the Fund may seek exposure to asset-backed securities, mortgage-backed securities or junk bonds by purchasing shares of mutual funds that may have direct or indirect exposure to these asset classes. Consequently, the risks to the Fund are limited to the risks associated with investing in mutual funds that have investments in these asset classes. The principal risks to investing in the Fund, including those that may arise from indirect exposure to asset-backed securities, mortgage-backed securities or junk bonds are detailed in the "Principal Risks of Investing" and "Glossary of Risks" sections of the Fund's prospectus.

In addition, while the Fund will generally not invest in Underlying Funds that are sub-advised by Goldman Sachs Asset Management, L.P. ("GSAM") or an affiliate of GSAM (each an "Affiliated Underlying Fund"), it may invest in an Affiliated Underlying Fund over other Underlying Funds when the Affiliated Underlying Fund is the only option available under the Fund's asset allocation model.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- *Allocation risk* – The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.
- *Underlying funds risk* **–** The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Fixed-income risk* **–** The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Interest rate risk* **–** When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* **–** The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Mid-capitalization investing risk* **–** The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- *Small-capitalization investing risk* **–** Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds

are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.

- *Mortgage-related and other asset-backed securities risk* – Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *U.S. Government securities risk* – Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject an Underlying Fund to counterparty risk.
- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Foreign regulatory risk* – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance prior to on or about July 1, 2019 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Moderately Conservative Index with the Morningstar Moderately Conservative Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 60% Bloomberg Barclays U.S. Aggregate Bond Index, 30% S&P 500 Index, 10% MSCI EAFE Index (Net) as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Goldman Sachs Managed Moderate Growth Fund

(formerly, JNL/S&P Managed Moderate Growth Fund)

Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- *Mailing in the postage-paid card on the cover of this report;*
- *Calling 1-866-349-4564; or*
- *Signing up on* www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is capital growth and current income.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees
(fees paid directly from your investment)
Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.08%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses[1]	0.05%
Acquired Fund Fees and Expenses[2]	0.68%
Total Annual Fund Operating Expenses	1.11%

1 "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
2 Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a $10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Goldman Sachs Managed Moderate Growth Fund Class A			
1 year	3 years	5 years	10 years
$113	$353	$612	$1,352

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	16%

Portfolio turnover for the period of January 1, 2019 to June 30, 2019 is from the prior sub-adviser, Standard & Poor's Investment Advisory Services LLC.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds ("Underlying Funds"). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust and JNL Investors Series Trust. Not all Funds of the JNL Series Trust and JNL Investors Series Trust are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates approximately 50% to 70% of its assets to Underlying Funds that invest primarily in equity securities, 30% to 50% to Underlying Funds that invest primarily in fixed-income securities and 0% to 20% to Underlying Funds that invest primarily in money market securities.

The Fund groups the Underlying Funds according to investment categories set forth below:

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-income
- International
- International Fixed-Income
- Sector
- Tactical Management

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, Sector, and Specialty investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Risk Management and Tactical Management investment categories include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund's exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund's relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies. The Fund does not anticipate investing significant amounts in the alternative categories.

In determining allocations to any particular Underlying Fund, the Fund's investment adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

The Fund does not take direct positions in asset-backed securities, mortgage-backed securities or junk bonds. Through the implementation of the Fund's asset allocation model, the Fund may seek exposure to asset-backed securities, mortgage-backed securities or junk bonds by purchasing shares of mutual funds that may have direct or indirect exposure to these asset classes. Consequently, the risks to the Fund are limited to the risks associated with investing in mutual funds that have investments in these asset classes. The principal risks to investing in the Fund, including those that may arise from indirect exposure to asset-backed securities, mortgage-backed securities or junk bonds are detailed in the "Principal Risks of Investing" and "Glossary of Risks" sections of the Fund's prospectus.

In addition, while the Fund will generally not invest in Underlying Funds that are sub-advised by Goldman Sachs Asset Management, L.P. ("GSAM") or an affiliate of GSAM (each an "Affiliated Underlying Fund"), it may invest in an Affiliated Underlying Fund over other Underlying Funds when the Affiliated Underlying Fund is the only option available under the Fund's asset allocation model.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- *Allocation risk* – The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.
- *Underlying funds risk* – The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Mid-capitalization investing risk* – The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- *Small-capitalization investing risk* – Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds

are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.

- *Mortgage-related and other asset-backed securities risk* – Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *U.S. Government securities risk* – Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject an Underlying Fund to counterparty risk.
- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Foreign regulatory risk* – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance prior to on or about July 1, 2019 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Moderate Index with the Morningstar Moderate Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 45% S&P 500 Index, 40% Bloomberg Barclays U.S. Aggregate Bond Index, 15% MSCI EAFE Index (Net) as the Fund's secondary benchmark.

Annual Total Returns as of December 31

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Goldman Sachs Managed Growth Fund
(formerly, JNL/S&P Managed Growth Fund)
Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- *Mailing in the postage-paid card on the cover of this report;*
- *Calling 1-866-349-4564; or*
- *Signing up on* www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek capital growth. Current income is a secondary objective.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees
(fees paid directly from your investment)
Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.08%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses[1]	0.05%
Acquired Fund Fees and Expenses[2]	0.68%
Total Annual Fund Operating Expenses	1.11%

1 "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
2 Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a $10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Goldman Sachs Managed Growth Fund Class A			
1 year	3 years	5 years	10 years
$113	$353	$612	$1,352

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	15%

Portfolio turnover for the period of January 1, 2019 to June 30, 2019 is from the prior sub-adviser, Standard & Poor's Investment Advisory Services LLC.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds ("Underlying Funds"). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust and JNL Investors Series Trust. Not all Funds of the JNL Series Trust and JNL Investors Series Trust are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates approximately 70% to 90% of its assets to Underlying Funds that invest primarily in equity securities, 10% to 30% to Underlying Funds that invest primarily in fixed-income securities and 0-15% to Underlying Funds that invest primarily in money market securities.

The Fund groups the Underlying Funds according to investment categories set forth below:

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-income
- International
- International Fixed-Income
- Sector
- Tactical Management

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, Sector, and Specialty investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Risk Management and Tactical Management investment categories include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund's exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund's relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies. The Fund does not anticipate investing significant amounts in the alternative categories.

In determining allocations to any particular Underlying Fund, the Fund's investment adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

The Fund does not take direct positions in asset-backed securities, mortgage-backed securities or junk bonds. Through the implementation of the Fund's asset allocation model, the Fund may seek exposure to asset-backed securities, mortgage-backed securities or junk bonds by purchasing shares of mutual funds that may have direct or indirect exposure to these asset classes. Consequently, the risks to the Fund are limited to the risks associated with investing in mutual funds that have investments in these asset classes. The principal risks to investing in the Fund, including those that may arise from indirect exposure to asset-backed securities, mortgage-backed securities or junk bonds are detailed in the "Principal Risks of Investing" and "Glossary of Risks" sections of the Fund's prospectus.

In addition, while the Fund will generally not invest in Underlying Funds that are sub-advised by Goldman Sachs Asset Management, L.P. ("GSAM") or an affiliate of GSAM (each an "Affiliated Underlying Fund"), it may invest in an Affiliated Underlying Fund over other Underlying Funds when the Affiliated Underlying Fund is the only option available under the Fund's asset allocation model.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- *Allocation risk* – The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.
- *Underlying funds risk* – The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Mid-capitalization investing risk* – The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- *Small-capitalization investing risk* – Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds

are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.

- *Mortgage-related and other asset-backed securities risk* – Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *U.S. Government securities risk* – Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject an Underlying Fund to counterparty risk.
- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Foreign regulatory risk* – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance prior to on or about July 1, 2019 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

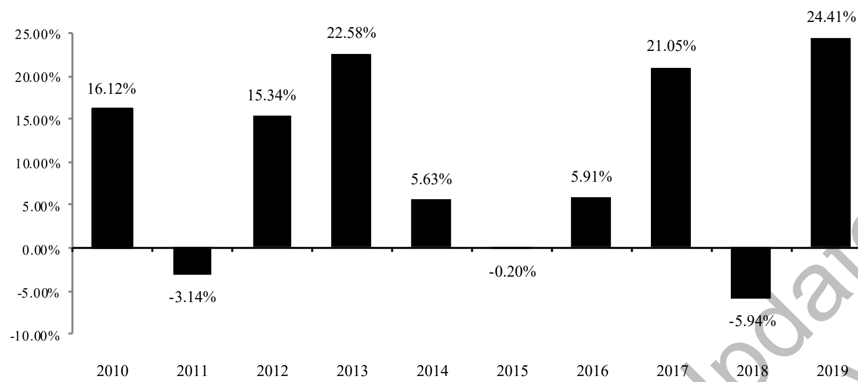
The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Moderately Aggressive Index with the Morningstar Moderately Aggressive Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 60% S&P 500 Index, 20% Bloomberg Barclays U.S. Aggregate Bond Index, 20% MSCI EAFE Index (Net) as the Fund's secondary benchmark.

Annual Total Returns as of December 31

Class A



Best Quarter (ended 3/31/2019): 12.23%; **Worst Quarter (ended 9/30/2011):** -14.72%

Michael Carapucci	2010	Vice President, GSAM
Christopher Lvoff, CFA, ASA	July 2019	Managing Director, GSAM

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Goldman Sachs Managed Aggressive Growth Fund

(formerly, JNL/S&P Managed Aggressive Growth Fund)

Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- *Mailing in the postage-paid card on the cover of this report;*
- *Calling 1-866-349-4564; or*
- *Signing up on* www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is capital growth.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees
(fees paid directly from your investment)
Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.09%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses[1]	0.06%
Acquired Fund Fees and Expenses[2]	0.68%
Total Annual Fund Operating Expenses	1.13%

1 "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
2 Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a $10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Goldman Sachs Managed Aggressive Growth Fund Class A			
1 year	3 years	5 years	10 years
$115	$359	$622	$1,375

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	13%

Portfolio turnover for the period of January 1, 2019 to June 30, 2019 is from the prior sub-adviser, Standard & Poor's Investment Advisory Services LLC.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds ("Underlying Funds"). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust and JNL Investors Series Trust. Not all Funds of the JNL Series Trust and JNL Investors Series Trust are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates up to 80% to 100% of its assets to Underlying Funds that invest primarily in equity securities, 0% to 20% to Underlying Funds that invest primarily in fixed-income securities and 0% to 10% to Underlying Funds that invest primarily in money market securities.

The Fund groups the Underlying Funds according to investment categories set forth below:

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-income
- International
- International Fixed-Income
- Sector
- Tactical Management

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, Sector, and Specialty investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Risk Management and Tactical Management investment categories include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund's exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund's relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies. The Fund does not anticipate investing significant amounts in the alternative categories.

In determining allocations to any particular Underlying Fund, the Fund's investment adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

The Fund does not take direct positions in asset-backed securities, mortgage-backed securities or junk bonds. Through the implementation of the Fund's asset allocation model, the Fund may seek exposure to asset-backed securities, mortgage-backed securities or junk bonds by purchasing shares of mutual funds that may have direct or indirect exposure to these asset classes. Consequently, the risks to the Fund are limited to the risks associated with investing in mutual funds that have investments in these asset classes. The principal risks to investing in the Fund, including those that may arise from indirect exposure to asset-backed securities, mortgage-backed securities or junk bonds are detailed in the "Principal Risks of Investing" and "Glossary of Risks" sections of the Fund's prospectus.

In addition, while the Fund will generally not invest in Underlying Funds that are sub-advised by Goldman Sachs Asset Management, L.P. ("GSAM") or an affiliate of GSAM (each an "Affiliated Underlying Fund"), it may invest in an Affiliated Underlying Fund over other Underlying Funds when the Affiliated Underlying Fund is the only option available under the Fund's asset allocation model.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- *Allocation risk* – The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.
- *Underlying funds risk* – The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Mid-capitalization investing risk* – The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- *Small-capitalization investing risk* – Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds

are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.

- *Mortgage-related and other asset-backed securities risk* – Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *U.S. Government securities risk* – Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject an Underlying Fund to counterparty risk.
- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Foreign regulatory risk* – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance prior to on or about July 1, 2019 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Aggressive Index with the Morningstar Aggressive Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 65% S&P 500 Index, 10% Bloomberg Barclays U.S. Aggregate Bond Index, 25% MSCI EAFE Index (Net) as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL Conservative Allocation Fund
Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- *Mailing in the postage-paid card on the cover of this report;*
- *Calling 1-866-349-4564; or*
- *Signing up on* www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek the generation of income through investment in other funds (the "Underlying Funds").

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees
(fees paid directly from your investment)
Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.13%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses[1]	0.05%
Acquired Fund Fees and Expenses[2]	0.70%
Total Annual Fund Operating Expenses[3]	1.18%

1 "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
2 Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.
3 Expense information has been restated to reflect current fees.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a $10,000 investment, assuming (1) 5% annual return; (2) redemption at the

end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL Conservative Allocation Fund Class A			
1 year	3 years	5 years	10 years
$120	$375	$649	$1,432

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	32%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of the Underlying Funds. The Fund allocates its assets to Underlying Funds that invest primarily in fixed income and other income-oriented securities (including high-yield ("junk") bonds) of issuers in the U.S. and foreign countries, including emerging markets. The Underlying Funds in which the Fund may invest each are a separate series of the JNL Series Trust and JNL Investors Series Trust. Not all Funds of the JNL Series Trust and JNL Investors Series Trust are available as Underlying Funds. Please refer to the "Additional Information About Each Fund" section of the Prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates approximately 0% to 40% of its assets to Underlying Funds that invest primarily in equity securities, 60% to 100% to Underlying Funds that invest primarily in fixed-income securities and 0% to 20% of its assets to Underlying Funds that invest primarily in money market securities.

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-income
- International
- International Fixed-Income
- Sector
- Tactical Management

The Fund considers the Underlying Funds in the Domestic/Global Fixed Income and International Fixed Income investment categories to be funds that invest primarily in fixed income securities, and the Underlying Funds in the Domestic/Global Equity, International, Sector, and Specialty investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Risk Management and Tactical Management investment categories include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund's exposure to fixed income securities and equity securities will be allocated according to the Underlying Fund's relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies.

Each Underlying Fund has its own investment objective and invests in certain types of securities or other assets in order to implement its investment strategy and seek to achieve its investment objective. Those types of securities or other assets include, but are not limited to: equity securities (such as common stock, preferred stock, and convertible securities), equity futures, equity swaps, currency forwards, currency futures, commodity futures and swaps, bond futures, fixed income swaps, interest rate swaps, and inflation swaps; U.S. and foreign government bonds, including inflation protected bonds (such as Treasury Inflation Protected Securities); bank loans; cash and cash equivalents, including but not limited to money market fund shares. These holdings can include investment exposure to both developed and emerging markets, and may be illiquid or thinly traded. Securities held by the Underlying Funds may be denominated in U.S. and/or non-U.S. currencies.

An Underlying Fund may be leveraged and therefore could be subject to a heightened risk of loss. The leverage involved in certain derivative transactions may result in an Underlying Fund's net asset value being more sensitive to changes in the value of the related investment.

Some of the Underlying Funds, particularly those classified as fixed-income strategies, may hold a significant amount of asset-backed securities, mortgage-backed securities, derivatives, and/or junk bonds in order to execute their investment strategies.

In determining allocations to any particular Underlying Fund, the Adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- *Allocation risk* – The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.
- *Underlying funds risk* **–** The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Mid-capitalization and small-capitalization investing risk* – The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- *Fixed-income risk* **–** The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Interest rate risk* **–** When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* **–** The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Emerging markets and less developed countries risk* **–** Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or

other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.

- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Investment in other investment companies risk* – As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- *Foreign regulatory risk* – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The performance data includes the performance of the Fund, then a series of the Jackson Variable Series Trust for periods before the Fund's registration statement became effective. Effective April 27, 2020, the Fund will be combined with JNL/Nicholas Convertible Arbitrage Fund (the "Acquired Fund"), a series of Jackson Variable Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Conservative Index with the Morningstar Conservative Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 20% MSCI All Country World Index (Net), 80% Bloomberg Barclays U.S. Aggregate Bond Index as the Fund's secondary benchmark.

Mark Pliska, CFA	April 2015	Portfolio Manager, JNAM

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL Moderate Allocation Fund
Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- *Mailing in the postage-paid card on the cover of this report;*
- *Calling 1-866-349-4564; or*
- *Signing up on www.jackson.com*

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek a balance between the generation of income and the long-term growth of capital through investment in other funds (the "Underlying Funds").

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees
(fees paid directly from your investment)
Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.12%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses[1]	0.05%
Acquired Fund Fees and Expenses[2]	0.73%
Total Annual Fund Operating Expenses[3]	1.20%

1 "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
2 Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.
3 Expense information has been restated to reflect current fees.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a $10,000 investment, assuming (1) 5% annual return; (2) redemption at the

end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL Moderate Allocation Fund Class A			
1 year	3 years	5 years	10 years
$122	$381	$660	$1,455

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	22%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of the Underlying Funds. The Fund allocates its assets to Underlying Funds that invest primarily in fixed income and other income-oriented securities (including high-yield ("junk") bonds) as well as dividend-paying equity securities of issuers in the U.S. and foreign countries, including emerging markets. The Underlying Funds in which the Fund may invest each are a separate series of the JNL Series Trust and JNL Investors Series Trust. Not all Funds of the JNL Series Trust and JNL Investors Series Trust are available as Underlying Funds. Please refer to the "Additional Information About Each Fund" section of the Prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates approximately 20% to 60% of its assets to Underlying Funds that invest primarily in equity securities, 40% to 80% to Underlying Funds that invest primarily in fixed-income securities and 0% to 20% of its assets to Underlying Funds that invest primarily in money market securities.

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-income
- International
- International Fixed-Income
- Sector
- Tactical Management

The Fund considers the Underlying Funds in the Domestic/Global Fixed Income and International Fixed Income investment categories to be funds that invest primarily in fixed income securities, and the Underlying Funds in the Domestic/Global Equity, International, Sector, and Specialty investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Risk Management and Tactical Management investment categories include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund's exposure to fixed income securities and equity securities will be allocated according to the Underlying Fund's relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies.

Each Underlying Fund has its own investment objective and invests in certain types of securities or other assets in order to implement its investment strategy and seek to achieve its investment objective. Those types of securities or other assets include, but are not limited to: equity securities (such as common stock, preferred stock, and convertible securities), equity futures, equity swaps, currency forwards, currency futures, commodity futures and swaps, bond futures, fixed income swaps, interest rate swaps, and inflation swaps; U.S. and foreign government bonds, including inflation protected bonds (such as Treasury Inflation Protected Securities); bank loans; cash and cash equivalents, including but not limited to money market fund shares. These holdings can include investment exposure to both developed and emerging markets, and may be illiquid or thinly traded. Securities held by the Underlying Funds may be denominated in U.S. and/or non-U.S. currencies.

An Underlying Fund may be leveraged and therefore could be subject to a heightened risk of loss. The leverage involved in certain derivative transactions may result in an Underlying Fund's net asset value being more sensitive to changes in the value of the related investment.

Some of the Underlying Funds, particularly those classified as fixed-income strategies, may hold a significant amount of asset-backed securities, mortgage-backed securities, derivatives, and/or junk bonds in order to execute their investment strategies.

In determining allocations to any particular Underlying Fund, the Adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- *Allocation risk* – The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.
- *Underlying funds risk* – The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Mid-capitalization and small-capitalization investing risk* – The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or

other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.

- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Investment in other investment companies risk* – As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- *Foreign regulatory risk* – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The performance data includes the performance of the Fund, then a series of the Jackson Variable Series Trust for periods before the Fund's registration statement became effective. Effective April 27, 2020, the Fund will be combined with JNL Institutional Alt 50 Fund (the "Acquired Fund"), a series of JNL Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Moderately Conservative Index with the Morningstar Moderately Conservative Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 40% MSCI All Country World Index (Net), 60% Bloomberg Barclays U.S. Aggregate Bond Index as the Fund's secondary benchmark.

Portfolio Management.

Investment Adviser to the Fund:
Jackson National Asset Management, LLC ("JNAM")

Portfolio Managers:

Name:	Joined Fund Management Team In:	Title:
William Harding, CFA	April 2015	Senior Vice President, Chief Investment Officer and Portfolio Manager, JNAM
Sean Hynes, CFA, CAIA	April 2015	Assistant Vice President and Portfolio Manager, JNAM
Mark Pliska, CFA	April 2015	Portfolio Manager, JNAM

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL Moderate Growth Allocation Fund
Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- *Mailing in the postage-paid card on the cover of this report;*
- *Calling 1-866-349-4564; or*
- *Signing up on* www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objectives. The investment objective of the Fund is to seek capital growth. Current income is a secondary objective.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees
(fees paid directly from your investment)
Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.09%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses[1]	0.05%
Acquired Fund Fees and Expenses[2]	0.74%
Total Annual Fund Operating Expenses	1.18%

1 "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
2 Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a $10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL Moderate Growth Allocation Fund Class A			
1 year	3 years	5 years	10 years
$120	$375	$649	$1,432

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	17%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds ("Underlying Funds"). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust and JNL Investors Series Trust. Not all Funds of the JNL Series Trust and JNL Investors Series Trust are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates approximately 40% to 80% of its assets to Underlying Funds that invest primarily in equity securities, 20% to 60% to Underlying Funds that invest primarily in fixed-income securities and 0% to 20% of its assets to Underlying Funds that invest primarily in money market securities.

The Fund groups the Underlying Funds according to investment categories set forth below:

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-income
- International
- International Fixed-Income
- Sector
- Tactical Management

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, Sector, and Specialty investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Risk Management and Tactical Management investment categories include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund's exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund's relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies.

Some of the Underlying Funds, particularly those classified as Fixed Income Strategies, may hold a significant amount of asset-backed securities, mortgage-backed securities, derivatives, and/or junk bonds in order to execute their investment strategy.

In determining allocations to any particular Underlying Fund, the Fund's Adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- *Allocation risk* – The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.

- *Underlying funds risk* **–** The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Mid-capitalization and small-capitalization investing risk* – The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- *Fixed-income risk* **–** The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Interest rate risk* **–** When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* **–** The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Emerging markets and less developed countries risk* **–** Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Investment in other investment companies risk* – As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited**.**

- *Foreign regulatory risk* – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance prior to August 29, 2011 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective September 25, 2017, the Fund was combined with the JNAM Guidance – Moderate Growth Fund, a series of Jackson Variable Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the JNAM Guidance – Moderate Growth Fund.

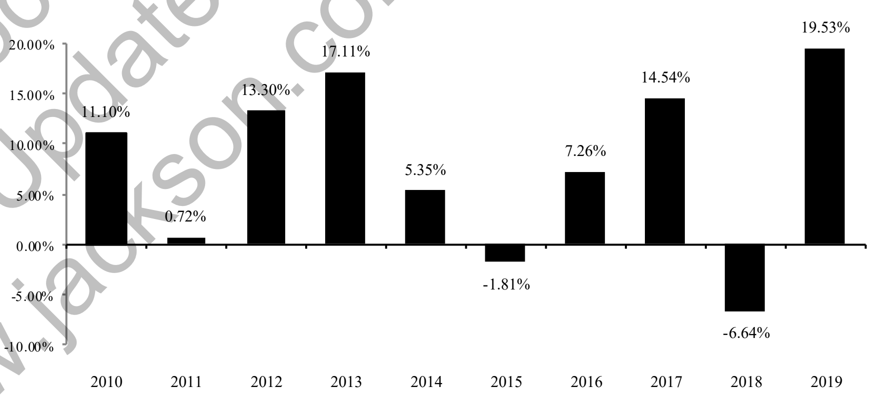
The performance data includes the performance of the Fund, then a series of the Jackson Variable Series Trust for periods before the Fund's registration statement became effective. Effective April 27, 2020, the Fund will be combined with JNL Institutional Alt 25 Fund, a series of JNL Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the JNL Institutional Alt 25 Fund.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Moderate Index with the Morningstar Moderate Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 60% MSCI All Country World Index (Net), 40% Bloomberg Barclays U.S. Aggregate Bond Index as the Fund's secondary benchmark.

Annual Total Returns as of December 31

Class A



Best Quarter (ended 9/30/2010): 9.31%; **Worst Quarter (ended 9/30/2011):** -9.79%

Portfolio Management.

Investment Adviser to the Fund:
Jackson National Asset Management, LLC ("JNAM")

Portfolio Managers:

Name:	Joined Fund Management Team In:	Title:
William Harding, CFA	November 2012	Senior Vice President, Chief Investment Officer and Portfolio Manager, JNAM
Sean Hynes, CFA, CAIA	April 2014	Assistant Vice President and Portfolio Manager, JNAM
Mark Pliska, CFA	April 2014	Portfolio Manager, JNAM

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL Growth Allocation Fund
Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- *Mailing in the postage-paid card on the cover of this report;*
- *Calling 1-866-349-4564; or*
- *Signing up on* www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek capital growth and current income.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees
(fees paid directly from your investment)
Not Applicable

Annual Fund Operating Expenses **(Expenses that you pay each year as a percentage of the value of your investment)**	
	Class A
Management Fee	0.09%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses[1]	0.05%
Acquired Fund Fees and Expenses[2]	0.75%
Total Annual Fund Operating Expenses	1.19%

[1] "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
[2] Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a $10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL Growth Allocation Fund Class A			
1 year	3 years	5 years	10 years
$121	$378	$654	$1,443

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	13%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds ("Underlying Funds"). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust and JNL Investors Series Trust. Not all Funds of the JNL Series Trust and JNL Investors Series Trust are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates approximately 60% to 100% of its assets to Underlying Funds that invest primarily in equity securities, 0% to 40% to Underlying Funds that invest primarily in fixed-income securities and 0% to 20% of its assets to Underlying Funds that invest primarily in money market securities.

The Fund groups the Underlying Funds according to investment categories set forth below:

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-income
- International
- International Fixed-Income
- Sector
- Tactical Management

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, Sector, and Specialty investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Risk Management and Tactical Management investment categories include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund's exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund's relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies.

Some of the Underlying Funds, particularly those classified as Fixed Income Strategies, may hold a significant amount of asset-backed securities, mortgage-backed securities, derivatives, and/or junk bonds in order to execute their investment strategy.

In determining allocations to any particular Underlying Fund, the Fund's Adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- *Allocation risk* – The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.

- *Underlying funds risk* – The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Mid-capitalization and small-capitalization investing risk* – The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Investment in other investment companies risk* – As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.

- *Foreign regulatory risk* – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance prior to August 29, 2011 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective September 25, 2017, the Fund was combined with the JNAM Guidance – Growth Fund (the "Acquired Fund"), a series of Jackson Variable Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Moderately Aggressive Index with the Morningstar Moderately Aggressive Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 80% MSCI All Country World Index (Net), 20% Bloomberg Barclays U.S. Aggregate Bond Index as the Fund's secondary benchmark.

Investment Adviser to the Fund:
Jackson National Asset Management, LLC ("JNAM")

Portfolio Managers:

Name:	Joined Fund Management Team In:	Title:
William Harding, CFA	November 2012	Senior Vice President, Chief Investment Officer and Portfolio Manager, JNAM
Sean Hynes, CFA, CAIA	April 2014	Assistant Vice President and Portfolio Manager, JNAM
Mark Pliska, CFA	April 2014	Portfolio Manager, JNAM

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL Aggressive Growth Allocation Fund
Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- *Mailing in the postage-paid card on the cover of this report;*
- *Calling 1-866-349-4564; or*
- *Signing up on* www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is capital growth.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees
(fees paid directly from your investment)
Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.10%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses[1]	0.05%
Acquired Fund Fees and Expenses[2]	0.76%
Total Annual Fund Operating Expenses	1.21%

[1] "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
[2] Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a $10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL Aggressive Growth Allocation Fund Class A			
1 year	3 years	5 years	10 years
$123	$384	$665	$1,466

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	17%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds ("Underlying Funds"). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust and JNL Investors Series Trust. Not all Funds of the JNL Series Trust and JNL Investors Series Trust are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates approximately 70% to 100% of its assets to Underlying Funds that invest primarily in equity securities, 0% to 30% to Underlying Funds that invest primarily in fixed-income securities and 0% to 20% of its assets to Underlying Funds that invest primarily in money market securities.

The Fund groups the Underlying Funds according to investment categories set forth below:

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-income
- International
- International Fixed-Income
- Sector
- Tactical Management

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, Sector, and Specialty investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Risk Management and Tactical Management investment categories include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund's exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund's relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies.

Some of the Underlying Funds, particularly those classified as Fixed Income Strategies, may hold a significant amount of asset-backed securities, mortgage-backed securities, derivatives, and/or junk bonds in order to execute their investment strategy.

In determining allocations to any particular Underlying Fund, the Fund's Adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- *Allocation risk* – The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.

- *Underlying funds risk* – The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Mid-capitalization and small-capitalization investing risk* – The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Investment in other investment companies risk* – As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.

- *Foreign regulatory risk* – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance prior to August 29, 2011 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective September 25, 2017, the Fund was combined with the JNAM Guidance – Equity 100 Fund and JNAM Guidance – Maximum Growth Fund (together, the "Acquired Funds"), series of Jackson Variable Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Funds.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Moderately Aggressive Index with the Morningstar Aggressive Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 90% MSCI All Country World Index (Net), 10% Bloomberg Barclays U.S. Aggregate Bond Index as the Fund's secondary benchmark.

Portfolio Management.

Investment Adviser to the Fund:
Jackson National Asset Management, LLC ("JNAM")

Portfolio Managers:

Name:	Joined Fund Management Team In:	Title:
William Harding, CFA	November 2012	Senior Vice President, Chief Investment Officer and Portfolio Manager, JNAM
Sean Hynes, CFA, CAIA	April 2014	Assistant Vice President and Portfolio Manager, JNAM
Mark Pliska, CFA	April 2014	Portfolio Manager, JNAM

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

(This page intentionally left blank.)

APPENDIX A

The JNL/Goldman Sachs Managed Conservative Fund, the JNL/Goldman Sachs Managed Moderate Fund, the JNL/Goldman Sachs Managed Moderate Growth Fund, the JNL/Goldman Sachs Managed Growth Fund, the JNL/Goldman Sachs Managed Aggressive Growth Fund, and the JNL/Goldman Sachs 4 Fund are also referred to in this Prospectus as the JNL/Goldman Sachs Managed Funds. Effective April 27, 2020, the JNL Institutional Alt 100 Fund, a series of Jackson Variable Series Trust, will merge into the JNL Multi-Manager Alternative Fund.

Effective April 27, 2020, the JNL Institutional Alt 25 Fund will merge into the JNL Moderate Growth Allocation Fund.

Effective April 27, 2020, the JNL Institutional Alt 50 Fund will merge into the JNL Moderate Allocation Fund, a new series of JNL Series Trust.

Effective April 27, 2020, the JNL/FAMCO Flex Core Covered Call Fund, a series of Jackson Variable Series Trust, will merge into the JNL/JPMorgan Hedged Equity Fund.

Effective April 27, 2020, the JNL/Nicholas Convertible Arbitrage Fund, a series of Jackson Variable Series Trust, will merge into the JNL Conservative Allocation Fund, a new series of JNL Series Trust.

Effective April 27, 2020, the JNL/Eaton Vance Global Macro Absolute Return Advantage Fund, a series of Jackson Variable Series Trust, will merge into the JNL/Franklin Templeton Global Multisector Bond Fund.

Effective April 27, 2020, the JNL/Neuberger Berman Currency Fund, a series of Jackson Variable Series Trust, will merge into the JNL/PIMCO Income Fund.

Effective April 27, 2020, the JNL/Scout Unconstrained Bond Fund will merge into the JNL/PIMCO Income Fund.

Effective April 27, 2020, the JNL/Invesco China-India Fund will merge into the JNL Multi-Manager Emerging Markets Equity Fund (formerly, JNL/Lazard Emerging Markets Fund).

Effective April 27, 2020, the JNL/Oppenheimer Emerging Markets Innovator Fund will merge into the JNL Multi-Manager Emerging Markets Equity Fund (formerly, JNL/Lazard Emerging Markets Fund).

Effective April 27, 2020, the JNL/PPM America Mid Cap Value Fund will merge into the JNL/MFS Mid Cap Value Fund.

Effective April 27, 2020, the JNL/FPA + DoubleLine® Flexible Allocation Fund will merge into the JNL/JPMorgan Global Allocation Fund.

APPENDIX B

Goldman Sachs is a registered service mark of Goldman, Sachs & Co.

Fidelity Institutional Asset Management is a registered service mark of FMR LLC. Used with permission.

The "Dow Jones Industrial Average", and "The Dow 10" are products of S&P Dow Jones Indices LLC or its affiliates ("SPDJI"), and have been licensed for use. "Dow Jones®", "Dow Jones Industrial Average", "DJIA®", "The Dow®" and "The Dow 10" are service and/or trademarks of Dow Jones Trademark Holdings, LLC ("Dow Jones") and have been licensed to SPDJI and have been sub-licensed for use for certain purposes by Jackson National Life Insurance Company® ("Jackson"). The JNL/Mellon DowSM Index Fund and the JNL/Mellon Capital JNL 5 Fund ("Products") are not sponsored, endorsed, sold or promoted by SPDJI, Dow Jones, Standard & Poor's Financial Services LLC, or any of their respective affiliates (collectively, "S&P Dow Jones Indices"). S&P Dow Jones Indices (including any of their respective affiliates) makes no representation or warranty, expressed or implied, to the owners of the Funds or any member of the public regarding the advisability of investing in securities generally or in the Funds particularly. The only relationship of S&P Dow Jones Indices (including any of their respective affiliates) to the Funds is the licensing of certain trademarks, trade names and service marks of Dow Jones and of the "Dow Jones Industrial Average", and "The Dow 10", which are determined, composed and calculated by S&P Dow Jones Indices without regard to Jackson or the Products. S&P Dow Jones Indices have no obligation to take the needs of Jackson, or the owners of the Products into consideration in determining, composing or calculating the Indices. S&P Dow Jones Indices are not responsible for and have not participated in the determination of the prices, and amount of the Products or the timing of the issuance or sale of the Products in the determination or calculation of the equation by which the Products are to be converted into cash, surrendered or redeemed, as the case may be. S&P Dow Jones Indices have no obligation or liability in connection with the administration, marketing or trading of the Products. There is no assurance that investment products based on the Indices will accurately track index performance or provide positive investment returns. S&P Dow Jones Indices LLC is not an investment advisor. Inclusion of a security within an index is not a recommendation by S&P Dow Jones Indices to buy, sell, or hold such security, nor is it considered to be investment advice.

Dow Jones, SPDJI and their respective affiliates do *not*:

- Sponsor, endorse, sell or promote the Products.
- Recommend that any person invest in the Products.
- Have any responsibility or liability for or make any decisions about the timing, amount or pricing of the Product.
- Have any responsibility or liability for the administration, management or marketing of the Products.
- Consider the needs of the Products or the owners of the Products in determining, composing or calculating the Indexes or have any obligation to do so.

Dow Jones, SPDJI and their respective affiliates will not have any liability in connection with the Products. Specifically,

- **Dow Jones, SPDJI and their respective affiliates do not make any warranty, express or implied, and Dow Jones, SPDJI and their respective affiliates disclaim any warranty about:**
  - **The results to be obtained by the Products, the owners of the Products or any other person in connection with the use of the DJIA and the data included in the Indexes;**
  - **The accuracy or completeness of the Indexes and its data;**
  - **The merchantability and the fitness for a particular purpose or use of the Indexes and its data;**
- **Dow Jones, SPDJI and/or their respective affiliates will have no liability for any errors, omissions or interruptions in the Indexes or its data;**
- **Under no circumstances will Dow Jones, SPDJI and/or their respective affiliates be liable for any lost profits or indirect, punitive, special or consequential damages or losses, even if they know that they might occur.**

The licensing agreement relating to the use of the Indexes and trademarks referred to above by Jackson National Life Insurance Company® and SPDJI is solely for the benefit of the Products and not for any other third parties.

S&P DOW JONES INDICES DO NOT GUARANTEE THE ACCURACY AND/OR THE COMPLETENESS OF THE "DOW JONES INDUSTRIAL AVERAGE", and "THE DOW 10" OR ANY DATA INCLUDED THEREIN AND S&P DOW JONES INDICES SHALL HAVE NO LIABILITY FOR ANY ERRORS, OMISSIONS, OR INTERRUPTIONS THEREIN. S&P DOW JONES INDICES MAKE NO WARRANTY, EXPRESS OR IMPLIED, AS TO THE RESULTS TO BE OBTAINED BY JACKSON, OWNERS OF THE PRODUCTS, OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE "DOW JONES INDUSTRIAL AVERAGE", and "THE DOW 10" OR ANY DATA INCLUDED THEREIN. S&P DOW JONES INDICES MAKE NO EXPRESS OR IMPLIED WARRANTIES, AND EXPRESSLY DISCLAIMS ALL WARRANTIES, OF MERCHANTABILITY

OR FITNESS FOR A PARTICULAR PURPOSE OR USE WITH RESPECT TO THE "DOW JONES INDUSTRIAL AVERAGE", and "THE DOW 10" OR ANY DATA INCLUDED THEREIN. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT SHALL DOW JONES, CME OR THEIR RESPECTIVE AFFILIATES HAVE ANY LIABILITY FOR ANY LOST PROFITS OR INDIRECT, PUNITIVE, SPECIAL OR CONSEQUENTIAL DAMAGES OR LOSSES, EVEN IF NOTIFIED OF THE POSSIBILITY THEREOF. THERE ARE NO THIRD PARTY BENEFICIARIES OF ANY AGREEMENTS OR ARRANGEMENTS BETWEEN S&P DOW JONES INDICES AND JACKSON, OTHER THAN THE LICENSORS OF S&P DOW JONES INDICES.

THE JNL/MELLON MSCI KLD 400 SOCIAL INDEX FUND, THE JNL/MELLON INTERNATIONAL INDEX FUND, THE JNL/MELLON EMERGING MARKETS INDEX FUND, NL/MELLON MSCI WORLD INDEX FUND, JNL/MELLON COMMUNICATION SERVICES SECTOR FUND, THE JNL/MELLON CONSUMER DISCRETIONARY SECTOR FUND, JNL/MELLON FINANCIAL SECTOR FUND, JNL/MELLON HEALTHCARE SECTOR FUND, JNL/MELLON ENERGY SECTOR FUND, THE JNL/MELLON INFORMATION TECHNOLOGY SECTOR FUND, THE JNL/MELLON CONSUMER STAPLES SECTOR FUND, THE JNL/MELLON MATERIALS SECTOR FUND, THE JNL/MELLON INDUSTRIALS SECTOR FUND, THE JNL/MELLON REAL ESTATE SECTOR FUND, OR THE JNL/MELLON UTILITIES SECTOR FUND ("MELLON FUNDS") ARE NOT SPONSORED, ENDORSED, SOLD OR PROMOTED BY MSCI INC. ("MSCI"), ANY OF ITS AFFILIATES, ANY OF ITS INFORMATION PROVIDERS OR ANY OTHER THIRD PARTY INVOLVED IN, OR RELATED TO, COMPILING, COMPUTING OR CREATING ANY MSCI INDEX (COLLECTIVELY, THE "MSCI PARTIES"). THE MSCI INDEXES ARE THE EXCLUSIVE PROPERTY OF MSCI. MSCI AND THE MSCI INDEX NAMES ARE SERVICE MARK(S) OF MSCI OR ITS AFFILIATES AND HAVE BEEN LICENSED FOR USE FOR CERTAIN PURPOSES BY JACKSON NATIONAL ASSET MANAGEMENT, LLC. NONE OF THE MSCI PARTIES MAKES ANY REPRESENTATION OR WARRANTY, EXPRESS OR IMPLIED, TO THE ISSUER OR OWNERS OF THE MELLON FUNDS OR ANY OTHER PERSON OR ENTITY REGARDING THE ADVISABILITY OF INVESTING IN FUNDS GENERALLY OR IN THE MELLON FUNDS PARTICULARLY OR THE ABILITY OF ANY MSCI INDEX TO TRACK CORRESPONDING STOCK MARKET PERFORMANCE. MSCI OR ITS AFFILIATES ARE THE LICENSORS OF CERTAIN TRADEMARKS, SERVICE MARKS AND TRADE NAMES AND OF THE MSCI INDEXES WHICH ARE DETERMINED, COMPOSED AND CALCULATED BY MSCI WITHOUT REGARD TO THE MELLON FUNDS OR THE ISSUER OR OWNERS OF THE MELLON FUNDS OR ANY OTHER PERSON OR ENTITY. NONE OF THE MSCI PARTIES HAS ANY OBLIGATION TO TAKE THE NEEDS OF THE ISSUER OR OWNERS OF THE MELLON FUNDS OR ANY OTHER PERSON OR ENTITY INTO CONSIDERATION IN DETERMINING, COMPOSING OR CALCULATING THE MSCI INDEXES. NONE OF THE MSCI PARTIES IS RESPONSIBLE FOR OR HAS PARTICIPATED IN THE DETERMINATION OF THE TIMING OF, PRICES AT, OR QUANTITIES OF THE MELLON FUNDS TO BE ISSUED OR IN THE DETERMINATION OR CALCULATION OF THE EQUATION BY OR THE CONSIDERATION INTO WHICH THE MELLON FUNDS IS REDEEMABLE. FURTHER, NONE OF THE MSCI PARTIES HAS ANY OBLIGATION OR LIABILITY TO THE ISSUER OR OWNERS OF THE MELLON CAPITAL FUNDS OR ANY OTHER PERSON OR ENTITY IN CONNECTION WITH THE ADMINISTRATION, MARKETING OR OFFERING OF THE MELLON FUNDS.

ALTHOUGH MSCI SHALL OBTAIN INFORMATION FOR INCLUSION IN OR FOR USE IN THE CALCULATION OF THE MSCI INDEXES FROM SOURCES THAT MSCI CONSIDERS RELIABLE, NONE OF THE MSCI PARTIES WARRANTS OR GUARANTEES THE ORIGINALITY, ACCURACY AND/OR THE COMPLETENESS OF ANY MSCI INDEX OR ANY DATA INCLUDED THEREIN. NONE OF THE MSCI PARTIES MAKES ANY WARRANTY, EXPRESS OR IMPLIED, AS TO RESULTS TO BE OBTAINED BY THE ISSUER OF THE MELLON FUNDS, OWNERS OF THE MELLON FUNDS, OR ANY OTHER PERSON OR ENTITY, FROM THE USE OF ANY MSCI INDEX OR ANY DATA INCLUDED THEREIN. NONE OF THE MSCI PARTIES SHALL HAVE ANY LIABILITY FOR ANY ERRORS, OMISSIONS OR INTERRUPTIONS OF OR IN CONNECTION WITH ANY MSCI INDEX OR ANY DATA INCLUDED THEREIN. FURTHER, NONE OF THE MSCI PARTIES MAKES ANY EXPRESS OR IMPLIED WARRANTIES OF ANY KIND, AND THE MSCI PARTIES HEREBY EXPRESSLY DISCLAIM ALL WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, WITH RESPECT TO EACH MSCI INDEX AND ANY DATA INCLUDED THEREIN. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT SHALL ANY OF THE MSCI PARTIES HAVE ANY LIABILITY FOR ANY DIRECT, INDIRECT, SPECIAL, PUNITIVE, CONSEQUENTIAL OR ANY OTHER DAMAGES (INCLUDING LOST PROFITS) EVEN IF NOTIFIED OF THE POSSIBILITY OF SUCH DAMAGES.

The S&P 500 Index, S&P MidCap 400 Index, and S&P SmallCap 600 Index, (collectively, the "Indices") are products of S&P Dow Jones Indices LLC or its affiliates ("SPDJI"), and has been licensed for use by Jackson National Life Insurance Company ("Jackson"). Standard & Poor's®, S&P® and S&P 500®, S&P MidCap 400® and S&P SmallCap 600® are registered trademarks of Standard & Poor's Financial Services LLC; Dow Jones® is a registered trademark of Dow Jones Trademark Holdings LLC ("Dow Jones"). The JNL/Mellon S&P 500 Index Fund, JNL/Mellon S&P 400 MidCap Index Fund, JNL/Mellon Small Cap Index Fund, and JNL S&P 500 Index Fund (collectively, the "Products") are not sponsored, endorsed, sold or promoted by SPDJI, Dow Jones, Standard & Poor's Financial Services LLC, or any of their respective affiliates (collectively, "S&P Dow Jones Indices"). S&P Dow Jones Indices makes no representation or warranty, express or implied, to the owners of the Products or any member of the public regarding the advisability of investing in securities generally or in the Products particularly or the ability of the Indices to track general market performance. S&P Dow Jones Indices' only relationship to Jackson with respect to the Indices or the Products is the licensing of the Indices and certain trademarks, service marks and/or trade names of S&P Dow Jones Indices and/or its licensors. The Indices are determined, composed and calculated by S&P Dow Jones Indices without regard to Jackson or the Products. S&P Dow Jones Indices have no obligation to take the needs of Jackson or the owners of the Products into consideration in determining, composing or calculating the Indices. S&P Dow Jones Indices are not responsible for and have not participated in the determination of the prices, and amount of the Products or the timing of the issuance or sale of the Products in the determination or calculation of the equation by which the Products are to be converted into cash, surrendered or redeemed, as the case may be. S&P Dow Jones Indices have no obligation or liability in connection with the administration, marketing or trading of the Products. There is no assurance that investment products based on the Indices will accurately track index performance or provide positive investment returns. S&P Dow Jones Indices LLC is not an investment advisor. Inclusion of a security within an index is not a recommendation by S&P Dow Jones Indices to buy, sell, or hold such security, nor is it considered to be investment advice. Notwithstanding the foregoing, CME Group Inc. and its affiliates may independently issue and/or sponsor financial products unrelated to Products currently being issued by Jackson, but which may be similar to and competitive with Products. In addition, CME Group Inc. and its affiliates may trade financial products which are linked to the performance of the Index.

S&P DOW JONES INDICES DOES NOT GUARANTEE THE ADEQUACY, ACCURACY, TIMELINESS AND/OR THE COMPLETENESS OF THE INDICES OR ANY DATA RELATED THERETO OR ANY COMMUNICATION, INCLUDING BUT NOT LIMITED TO, ORAL OR WRITTEN COMMUNICATION (INCLUDING ELECTRONIC COMMUNICATIONS) WITH RESPECT THERETO. S&P DOW JONES INDICES SHALL NOT BE SUBJECT TO ANY DAMAGES OR LIABILITY FOR ANY ERRORS, OMISSIONS, OR DELAYS IN CALCULATING THE INDICES. S&P DOW JONES INDICES MAKE NO EXPRESS OR IMPLIED WARRANTIES, AND EXPRESSLY DISCLAIMS ALL WARRANTIES, OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE OR AS TO RESULTS TO BE OBTAINED BY JACKSON OR OWNERS OF THE PRODUCTS, OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE INDICES OR WITH RESPECT TO ANY DATA RELATED THERETO. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT WHATSOEVER SHALL S&P DOW JONES INDICES BE LIABLE FOR ANY INDIRECT, SPECIAL, INCIDENTAL, PUNITIVE, OR CONSEQUENTIAL DAMAGES INCLUDING BUT NOT LIMITED TO, LOSS OF PROFITS, TRADING LOSSES, LOST TIME OR GOODWILL, EVEN IF THEY HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES, WHETHER IN CONTRACT, TORT, STRICT LIABILITY, OR OTHERWISE. THERE ARE NO THIRD PARTY BENEFICIARIES OF ANY AGREEMENTS OR ARRANGEMENTS BETWEEN S&P DOW JONES INDICES AND JACKSON, OTHER THAN THE LICENSORS OF S&P DOW JONES INDICES.

SPDR® is a registered trademark of Standard & Poor's Financial Services LLC.

The following applies to the JNL/Goldman Sachs Managed Growth Fund, JNL/Goldman Sachs Managed Conservative Fund, JNL/Goldman Sachs Managed Moderate Growth Fund, JNL/Goldman Sachs Managed Moderate Fund, JNL/Goldman Sachs Managed Aggressive Growth Fund, JNL/Goldman Sachs International 5 Fund, JNL/Goldman Sachs Competitive Advantage Fund, JNL/Goldman Sachs Dividend Income & Growth Fund, JNL/Goldman Sachs Intrinsic Value Fund, and JNL/Goldman Sachs Total Yield Fund.

STANDARD & POOR'S®, S&P®, S&P 500® and, S&P MIDCAP 400® are registered trademarks of S&P Global Market Intelligence Inc. or its affiliates and have been licensed for use by Jackson National Life Insurance Company. Standard & Poor's Investment Advisory Services LLC ("SPIAS") is a part of S&P Global Market Intelligence. SPIAS does not provide advice to underlying clients of the firms to which it provides services. SPIAS does not act as a "fiduciary" or as an "investment manager," as defined under ERISA, to any investor. SPIAS is not responsible for client suitability.

Programs and products of the firms to which SPIAS provides services are not endorsed, sold or promoted by SPIAS and its affiliates, and SPIAS and its affiliates make no representation regarding the advisability of investing in those programs and products. Individual investors should ultimately rely on their own judgment and/or the judgment of a representative in making their investment decisions.

SPIAS and its affiliates (collectively, S&P Global) and any third-party providers, as well as their directors, officers, shareholders, employees or agents (collectively S&P Global Parties) do not guarantee the accuracy, completeness, timeliness or availability of the Content. S&P Global Parties are not responsible for any errors or omissions (negligent or otherwise), regardless of the cause, for the results obtained from the use of the Content, or for the security or maintenance of any data input by the user. The Content is provided on an "as is" basis. S&P GLOBAL PARTIES DISCLAIM ANY AND ALL EXPRESS OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, ANY WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE, FREEDOM FROM BUGS, SOFTWARE ERRORS OR DEFECTS, THAT THE CONTENT'S FUNCTIONING WILL BE UNINTERRUPTED OR THAT THE CONTENT WILL OPERATE WITH ANY SOFTWARE OR HARDWARE CONFIGURATION. In no event shall S&P Global Parties be liable to any party for any direct, indirect, incidental, exemplary, compensatory, punitive, special or consequential damages, costs, expenses, legal fees, or losses (including, without limitation, lost income or lost profits and opportunity costs or losses caused by negligence) in connection with any use of the Content even if advised of the possibility of such damages.

While SPIAS has obtained information from sources it believes to be reliable, SPIAS does not perform an audit and undertakes no duty of due diligence or independent verification of any information it receives.

S&P Global keeps certain activities of its divisions separate from each other in order to preserve the independence and objectivity of their respective activities. As a result, certain divisions of S&P Global may have information that is not available to other S&P Global divisions. S&P Global has established policies and procedures to maintain the confidentiality of certain non-public information received in connection with each analytical process.

S&P Global Ratings does not contribute to or participate in the provision of investment advice. S&P Global Ratings may receive compensation for its ratings and certain analyses, normally from issuers or underwriters of securities or from obligors. S&P Global reserves the right to disseminate its opinions and analyses. S&P Global's public ratings and analyses are made available on its Web sites, www.standardandpoors.com (free of charge), and www.ratingsdirect.com and www.globalcreditportal.com (subscription), and may be distributed through other means, including via S&P Global publications and third-party redistributors. Additional information about our ratings fees is available at www.standardandpoors.com/usratingsfees.

S&P Global Market Intelligence and its affiliates provide a wide range of services to, or relating to, many organizations, including issuers of securities, investment advisers, broker-dealers, investment banks, other financial institutions and financial intermediaries, and accordingly may receive fees or other economic benefits from those organizations, including organizations whose securities or services they may recommend, rate, include in model portfolios, evaluate or otherwise address. SPIAS may consider research and other information from affiliates in making its investment recommendations.

The investment policies of certain model portfolios specifically state that among the information SPIAS will consider in evaluating a security are the credit ratings assigned by S&P Global Ratings. SPIAS does not consider the ratings assigned by other credit rating agencies. Credit rating criteria and scales may differ among credit rating agencies. Ratings assigned by other credit rating agencies may reflect more or less favorable opinions of creditworthiness than ratings assigned by S&P Global Ratings.

The Product(s) is not sponsored, endorsed, sold or promoted by Nasdaq, Inc. or its affiliates (Nasdaq, with its affiliates, are referred to as the "Corporations"). The Corporations have not passed on the legality or suitability of, or the accuracy or adequacy of descriptions and disclosures relating to, the Product(s). The Corporations make no representation or warranty, express or implied to the owners of the Product(s) or any member of the public regarding the advisability of investing in securities generally or in the Product(s) particularly, or the ability of the Nasdaq-100® Index to track general stock market performance. The Corporations' only relationship to Jackson National Life Insurance Company ("Licensee") is in the licensing of the NASDAQ®, and Nasdaq-100® Index™ registered trademarks, and certain trade names of the Corporations and the use of the Nasdaq-100® Index which is determined, composed and calculated by NASDAQ without regard to Licensee or the Product(s). Nasdaq has no obligation to take the needs of the Licensee or the owners of the Product(s) into consideration in determining, composing or calculating the Nasdaq-100® Index. The Corporations are not responsible for and have not participated in the determination of the timing of, prices at, or quantities of the Product(s) to be issued or in the determination or calculation of the equation by which the Product(s) is to be converted into cash. The Corporations have no liability in connection with the administration, marketing or trading of the Product(s).

THE CORPORATIONS DO NOT GUARANTEE THE ACCURACY AND/OR UNINTERRUPTED CALCULATION OF THE NASDAQ-100® INDEX OR ANY DATA INCLUDED THEREIN. THE CORPORATIONS MAKE NO WARRANTY, EXPRESS OR IMPLIED, AS TO RESULTS TO BE OBTAINED BY LICENSEE, OWNERS OF THE PRODUCT(S), OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE NASDAQ-100® INDEX OR ANY DATA INCLUDED THEREIN. THE CORPORATIONS MAKE NO EXPRESS OR IMPLIED WARRANTIES, AND EXPRESSLY DISCLAIM ALL WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE WITH RESPECT TO THE NASDAQ-100® INDEX OR ANY DATA INCLUDED THEREIN. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT SHALL THE CORPORATIONS HAVE ANY LIABILITY FOR ANY LOST PROFITS OR SPECIAL, INCIDENTAL, PUNITIVE, INDIRECT, OR CONSEQUENTIAL DAMAGES, EVEN IF NOTIFIED OF THE POSSIBILITY OF SUCH DAMAGES.

NASDAQ®, and Nasdaq-100® Index™, are registered trademarks of Nasdaq, Inc. (which with its affiliates is referred to as the "Corporations") and are licensed for use by Jackson National Life Insurance Company. The JNL/Mellon Nasdaq® 100 Index Fund has not been passed on by the Corporations as to their legality or suitability. The JNL/Mellon Nasdaq® 100 Index Fund is not issued, endorsed, sold, or promoted by the Corporations. **THE CORPORATIONS MAKE NO WARRANTIES AND BEAR NO LIABILITY WITH RESPECT TO THE JNL/MELLON NASDAQ® 100 INDEX FUND.**

Morningstar® and Wide Moat Focus℠ Index are service marks of Morningstar, Inc. (Morningstar) and have been licensed for use for certain purposes by a Jackson National Asset Management, LLC ("JNAM").

JNL/Morningstar Wide Moat Index Fund is not sponsored, endorsed, sold or promoted by Morningstar. Morningstar makes no representation or warranty, express or implied, to the owners of the JNL/Morningstar Wide Moat Index Fund or any member of the public regarding the advisability of investing in securities generally or in the JNL/Morningstar Wide Moat Index Fund in particular or the ability of the Morningstar® Wide Moat Focus℠ Index to track general stock market performance. Morningstar's only relationship to JNAM is the licensing of: (i) certain service marks and service names of Morningstar; and (ii) the Wide Moat Focus℠ Index which is determined, composed and calculated by Morningstar without regard to JNAM or the JNL/Morningstar Wide Moat Index Fund. Morningstar has no obligation to take the needs of JNAM or the owners of JNL/Morningstar Wide Moat Index Fund into consideration in determining, composing or calculating the Wide Moat Focus℠ Index. Morningstar is not responsible for and has not participated in the determination of the prices and amount of the JNL/Morningstar Wide Moat Index Fund or the timing of the issuance or sale of the JNL/Morningstar Wide Moat Index Fund or in the determination or calculation of the equation by which the JNL/Morningstar Wide Moat Index Fund is converted into cash. Morningstar has no obligation or liability in connection with the administration, marketing or trading of the JNL/Morningstar Wide Moat Index Fund.

MORNINGSTAR DOES NOT GUARANTEE THE ACCURACY AND/OR THE COMPLETENESS OF THE WIDE MOAT FOCUSSM INDEX OR ANY DATA INCLUDED THEREIN AND MORNINGSTAR SHALL HAVE NO LIABILITY FOR ANY ERRORS, OMISSIONS, OR INTERRUPTIONS THEREIN. MORNINGSTAR MAKES NO WARRANTY, EXPRESS OR IMPLIED, AS TO RESULTS TO BE OBTAINED BY JNAM, OWNERS OR USERS OF THE JNL/MORNINGSTAR WIDE MOAT INDEX FUND, OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE WIDE MOAT FOCUS℠ INDEX OR ANY DATA INCLUDED THEREIN. MORNINGSTAR MAKES NO EXPRESS OR IMPLIED WARRANTIES, AND EXPRESSLY DISCLAIMS ALL WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE WITH RESPECT TO THE WIDE MOAT FOCUS℠ INDEX OR ANY DATA INCLUDED THEREIN. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT SHALL MORNINGSTAR HAVE ANY LIABILITY FOR ANY SPECIAL, PUNITIVE, INDIRECT, OR CONSEQUENTIAL DAMAGES (INCLUDING LOST PROFITS), EVEN IF NOTIFIED OF THE POSSIBILITY OF SUCH DAMAGES.

The JNL/RAFI® Fundamental Europe Fund, JNL/RAFI® Fundamental Asia Developed Fund, JNL/RAFI® Fundamental U.S. Small Cap Fund, and JNL/RAFI® Multi-Factor U.S. Equity Fund (the "JNL/RAFI Funds") are not sponsored, offered, or sold in any manner by RAFI Indices, LLC or any of its affiliates, licensors or contractors (the "RAFI Parties") nor do any of the RAFI Parties offer to any person purchasing a product that uses or incorporates a product based on an Index any express or implicit guarantee, warranty or assurance either with regard to the results of using the RAFI Multi-Factor® US Index, RAFI Fundamental US Small Index, RAFI Fundamental Europe Index, and RAFI Fundamental Asia Developed Index (each an "Index") or the Index Price at any time or in any other respect. Each Index is calculated and published by the RAFI Parties. The RAFI Parties use commercially reasonable efforts to ensure that the Index is calculated correctly. None of the RAFI Parties shall be liable to any person purchasing a product that uses or incorporates a product based on the Index for any error, omission, inaccuracy, incompleteness, delay, or interruption in the Index or any data related thereto or have any obligation to point out errors in the Index to any person. Neither publication of each Index by the RAFI Parties nor the licensing of the Index or Index trademark for the purpose of use in connection with the JNL/RAFI Funds constitutes a recommendation by any of the RAFI Parties to invest in nor does it in any way represent an assurance, endorsement or opinion of any of the RAFI Parties with regard to any investment in the JNL/RAFI Funds. The trade names Fundamental Index® and RAFI® are registered trademarks of Research Affiliates, LLC in the US and other countries.

American Funds Insurance Series®

Asset Allocation Fund

Summary prospectus
Class 1 shares
May 1, 2020

CAPITAL GROUP® | AMERICAN FUNDS®

Beginning on January 1, 2021, as permitted by regulations adopted by the U.S. Securities and Exchange Commission, you may not receive paper copies of the fund's shareholder reports from the insurance company that offers your contract unless you specifically request paper copies from the insurance company or from your financial intermediary. Instead, the shareholder reports will be made available on a website, and the insurance company will notify you by mail each time a report is posted and provide you with a website link to access the report. Instructions for requesting paper copies will be provided by your insurance company. If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the insurance company electronically by following the instructions provided by the insurance company.

You may elect to receive paper copies of all future reports free of charge from the insurance company. You can inform the insurance company that you wish to continue receiving paper copies of your shareholder reports by following the instructions provided by the insurance company. Your election to receive paper reports will apply to all investment options available under your contract.

Before you invest, you may want to review the fund's prospectus and statement of additional information, which contain more information about the fund and its risks. You can find the fund's prospectus, statement of additional information, reports to shareholders and other information about the fund online at capitalgroup.com/afis. You can also get this information at no cost by calling (800) 421-9900, ext. 65413 or by sending an email request to afisclass1@americanfunds.com. The current prospectus and statement of additional information, dated May 1, 2020, are incorporated by reference into this summary prospectus.

Investment objective The fund's investment objective is to provide high total return (including income and capital gains) consistent with preservation of capital over the long term.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy and hold an interest in Class 1 shares of the fund. It does not reflect insurance contract fees and expenses. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	**Class 1**
Management fee	0.27%
Other expenses	0.04
Total annual fund operating expenses	0.31

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest $10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	**3 years**	**5 years**	**10 years**
Class 1	$32	$100	$174	$393

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 79% of the average value of its portfolio.

Principal investment strategies In seeking to pursue its investment objective, the fund varies its mix of equity securities, debt securities and money market instruments. Under normal market conditions, the fund's investment adviser expects (but is not required) to maintain an investment mix falling within the following ranges: 40%-80% in equity securities, 20%-50% in debt securities and 0%-40% in money market instruments and cash. As of December 31, 2019, the fund was approximately 65% invested in equity securities, 30% invested in debt securities and 5% invested in money market instruments and cash. The proportion of equities, debt and money market securities held by the fund varies with market conditions and the investment adviser's assessment of their relative attractiveness as investment opportunities.

The fund invests in a diversified portfolio of common stocks and other equity securities, bonds and other intermediate and long-term debt securities, and money market instruments (debt securities maturing in one year or less). The fund may invest up to 15% of its assets in common stocks and other equity securities of issuers domiciled outside the United States and up to 5% of its assets in debt securities of issuers domiciled outside the United States. In addition, the fund may invest up to 25% of its debt assets in lower quality debt securities (rated Ba1 or below and BB+ or below by Nationally Recognized Statistical Rating Organizations designated by the fund's investment adviser or unrated but determined to be of equivalent quality by the fund's investment adviser). Such securities are sometimes referred to as "junk bonds."

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively priced securities that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

Market conditions — The prices of, and the income generated by, the common stocks, bonds and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Issuer risks — The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in growth-oriented stocks — Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments.

Investing in income-oriented stocks — The value of the fund's securities and income provided by the fund may be reduced by changes in the dividend policies of, and the capital resources available for dividend payments at, the companies in which the fund invests.

Investing in debt instruments — The prices of, and the income generated by, bonds and other debt securities held by the fund may be affected by changing interest rates and by changes in the effective maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. A general rise in interest rates may cause investors to sell debt securities on a large scale, which could also adversely affect the price and liquidity of debt securities and could also result in increased redemptions from the fund. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in the fund failing to recoup the full amount of its initial investment and having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer or guarantor will weaken or be perceived to be weaker, and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. A downgrade or default affecting any of the fund's securities could cause the value of the fund's shares to decrease. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which the fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not guarantees as to credit quality or an evaluation of market risk. The fund's investment adviser relies on its own credit analysts to research issuers and issues in seeking to assess credit and default risks.

Investing in lower rated debt instruments — Lower rated bonds and other lower rated debt securities generally have higher rates of interest and involve greater risk of default or price declines due to changes in the issuer's creditworthiness than those of higher quality debt securities. The market prices of these securities may fluctuate more than the prices of higher quality debt securities and may decline significantly in periods of general economic difficulty. These risks may be increased with respect to investments in junk bonds.

Investing in securities backed by the U.S. government — Securities backed by the U.S. Treasury or the full faith and credit of the U.S. government are guaranteed only as to the timely payment of interest and principal when held to maturity. Accordingly, the current market values for these securities will fluctuate with changes in interest rates and the credit rating of the U.S. government. Securities issued by government-sponsored entities and federal agencies and instrumentalities that are not backed by the full faith and credit of the U.S. government are neither issued nor guaranteed by the U.S. government.

Liquidity risk — Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

Investing outside the United States — Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

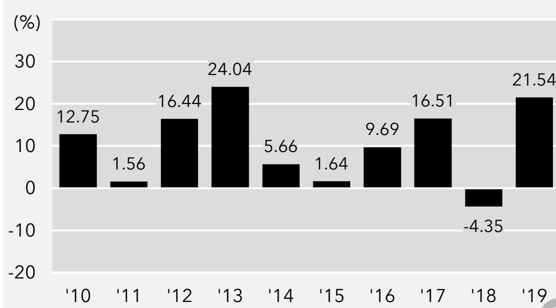
Asset allocation — The fund's percentage allocation to equity securities, debt securities and money market instruments could cause the fund to underperform relative to relevant benchmarks and other funds with similar investment objectives.

Management — The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. This information provides some indication of the risks of investing in the fund. The fund has selected the 60%/40% S&P 500 Index/Bloomberg Barclays Index to replace the S&P 500 Index as its broad-based securities market index. The fund's investment adviser believes that the 60%/40% S&P 500 Index/Bloomberg Barclays Index better reflects the market sectors and securities in which the fund primarily invests and the investment strategies employed by the adviser in seeking to achieve the fund's investment objective. The S&P 500 Index reflects the equity market sectors in which the fund invests. The Bloomberg Barclays U.S. Aggregate Index represents the U.S. investment-grade fixed-rate bond market. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting capitalgroup.com/afis.

Calendar year total returns



Highest/Lowest quarterly results during this period were:

Highest 10.51% (quarter ended March 31, 2012)

Lowest -11.69% (quarter ended September 30, 2011)

Average annual total returns For the periods ended December 31, 2019:	1 year	5 years	10 years	Lifetime
Fund (inception date – 8/1/89)	21.54%	8.59%	10.19%	8.63%
60%/40% S&P 500 Index/Bloomberg Barclays Index (reflects no deductions for sales charges, account fees, expenses or U.S. federal income taxes)	22.18	8.37	9.77	8.60
S&P 500 Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	31.49	11.70	13.56	9.97
Bloomberg Barclays U.S. Aggregate Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	8.72	3.05	3.75	5.91

Management

Investment adviser Capital Research and Management Company[SM]

Portfolio managers The individuals primarily responsible for the portfolio management of the fund are:

Portfolio manager/ Series title (if applicable)	Portfolio manager experience in this fund	Primary title with investment adviser
Alan N. Berro Co-President	20 years	Partner – Capital World Investors
David A. Daigle	11 years	Partner – Capital Fixed Income Investors
Peter Eliot	4 years	Partner – Capital International Investors
Jeffrey T. Lager	13 years	Partner – Capital International Investors
Jin Lee	2 years	Partner – Capital World Investors
James R. Mulally	14 years	Partner – Capital Fixed Income Investors
John R. Queen	4 years	Partner – Capital Fixed Income Investors

Purchase and sale of fund shares Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds — and not the holders of variable insurance contracts — are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

Tax information See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

Payments to broker-dealers and other financial intermediaries The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

You can access the fund's statutory prospectus or SAI at capitalgroup.com/afis.

American Funds Insurance Series®
Blue Chip Income and Growth Fund

Summary prospectus
Class 1 shares
May 1, 2020

CAPITAL GROUP® | AMERICAN FUNDS®

Beginning on January 1, 2021, as permitted by regulations adopted by the U.S. Securities and Exchange Commission, you may not receive paper copies of the fund's shareholder reports from the insurance company that offers your contract unless you specifically request paper copies from the insurance company or from your financial intermediary. Instead, the shareholder reports will be made available on a website, and the insurance company will notify you by mail each time a report is posted and provide you with a website link to access the report. Instructions for requesting paper copies will be provided by your insurance company. If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the insurance company electronically by following the instructions provided by the insurance company.

You may elect to receive paper copies of all future reports free of charge from the insurance company. You can inform the insurance company that you wish to continue receiving paper copies of your shareholder reports by following the instructions provided by the insurance company. Your election to receive paper reports will apply to all investment options available under your contract.

Before you invest, you may want to review the fund's prospectus and statement of additional information, which contain more information about the fund and its risks. You can find the fund's prospectus, statement of additional information, reports to shareholders and other information about the fund online at capitalgroup.com/afis. You can also get this information at no cost by calling (800) 421-9900, ext. 65413 or by sending an email request to afisclass1@americanfunds.com. The current prospectus and statement of additional information, dated May 1, 2020, are incorporated by reference into this summary prospectus.

Investment objectives The fund's investment objectives are to produce income exceeding the average yield on U.S. stocks generally and to provide an opportunity for growth of principal consistent with sound common stock investing.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy and hold an interest in Class 1 shares of the fund. It does not reflect insurance contract fees and expenses. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	**Class 1**
Management fee	0.39%
Other expenses	0.04
Total annual fund operating expenses	0.43

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest $10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	**3 years**	**5 years**	**10 years**
Class 1	$44	$138	$241	$542

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 37% of the average value of its portfolio.

Principal investment strategies Normally, the fund invests at least 80% of its assets in dividend-paying common stocks of larger, more established companies domiciled in the United States with market capitalizations greater than $4.0 billion. The fund's investment adviser considers these types of investments to be "blue chip" stocks. In seeking to produce a level of current income that exceeds the average yield on U.S. stocks, the fund generally looks to the average yield on stocks of companies listed on the S&P 500 Index. The fund also ordinarily invests at least 90% of its equity assets in the stock of companies whose debt securities are rated at least investment grade by Nationally Recognized Statistical Rating Organizations designated by the fund's investment adviser or unrated but determined to be of equivalent quality by the fund's investment adviser. The fund may invest up to 10% of its assets in equity securities of larger companies domiciled outside the United States, so long as they are listed or traded in the United States. The fund invests, under normal market conditions, at least 90% of its assets in equity securities. The fund is designed for investors seeking both income and capital appreciation.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued securities that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

Market conditions — The prices of, and the income generated by, the common stocks and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Issuer risks — The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in income-oriented stocks — The value of the fund's securities and income provided by the fund may be reduced by changes in the dividend policies of, and the capital resources available for dividend payments at, the companies in which the fund invests.

Investing in growth-oriented stocks — Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments.

Investing outside the United States — Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Management — The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. This information provides some indication of the risks of investing in the fund. Past investment results (before and after taxes) are not predictive of future investment results. You may elect to receive paper copies of all future reports free of charge from the insurance company. You can inform the insurance company that you wish to continue receiving paper copies of your shareholder reports by following the instructions provided by the insurance company. Your election to receive paper reports will apply to all investment options available under your contract.

Before you invest, you may want to review the fund's prospectus and statement of additional information, which contain more information about the fund and its risks. You can find the fund's prospectus, statement of additional information, reports to shareholders and other information about the fund online at capitalgroup.com/afis. You can also get this information at no cost by calling (800) 421-9900, ext. 65413 or by sending an email request to afisclass1@americanfunds.com. The current prospectus and statement of additional information, dated May 1, 2020, are incorporated by reference into this summary prospectus.

Investment objectives The fund has two primary investment objectives. It seeks (1) to provide a level of current income that exceeds the average yield on U.S. stocks generally and (2) to provide a growing stream of income over the years. The fund's secondary objective is to provide growth of capital.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy and hold an interest in Class 1 shares of the fund. It does not reflect insurance contract fees and expenses. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	**Class 1**
Management fee	0.49%
Other expenses	0.05
Total annual fund operating expenses	0.54
Fee waiver*	0.26
Total annual fund operating expenses after fee waiver	0.28

* The investment adviser is currently waiving a portion of its management fee equal to .26% of the fund's net assets. This waiver will be in effect through at least May 1, 2021. The waiver may only be modified or terminated with the approval of the fund's board.

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest $10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. The example reflects the fee waiver described above through the expiration date of such waiver and total annual fund operating expenses thereafter. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	**3 years**	**5 years**	**10 years**
Class 1	$29	$147	$276	$652

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 72% of the average value of its portfolio.

Principal investment strategies The fund normally invests at least 90% of its assets in income-producing securities (with at least 50% of its assets in common stocks and other equity securities). The fund invests primarily in a broad range of income-producing securities, including common stocks and bonds. In seeking to provide a level of current income that exceeds the average yield on U.S. stocks, the fund generally looks to the average yield on stocks of companies listed on the S&P 500 Index. The fund may also invest significantly in common stocks, bonds and other securities of issuers domiciled outside the United States.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued securities that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

Market conditions — The prices of, and the income generated by, the common stocks, bonds and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations. These risks may be heightened in the case of smaller capitalization stocks.

Issuer risks — The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in income-oriented stocks — The value of the fund's securities and income provided by the fund may be reduced by changes in the dividend policies of, and the capital resources available for dividend payments at, the companies in which the fund invests.

Investing in debt instruments — The prices of, and the income generated by, bonds and other debt securities held by the fund may be affected by changing interest rates and by changes in the effective maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. A general rise in interest rates may cause investors to sell debt securities on a large scale, which could also adversely affect the price and liquidity of debt securities and could also result in increased redemptions from the fund. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in the fund failing to recoup the full amount of its initial investment and having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer or guarantor will weaken or be perceived to be weaker, and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. A downgrade or default affecting any of the fund's securities could cause the value of the fund's shares to decrease. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which the fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not guarantees as to credit quality or an evaluation of market risk. The fund's investment adviser relies on its own credit analysts to research issuers and issues in seeking to assess credit and default risks.

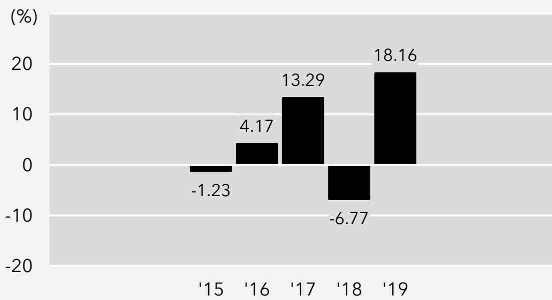
Investing outside the United States — Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Management — The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. This information provides some indication of the risks of investing in the fund. The 70%/30% MSCI ACWI/Bloomberg Barclays Index is a composite blend of 70% of the MSCI All Country World Index (ACWI) and 30% of the Bloomberg Barclays U.S. Aggregate Index and represents a broad measure of the global stock and bond markets, including market sectors in which the fund may invest. The Lipper Global Equity Income Funds Average includes funds that disclose investment objectives and/or strategies reasonably comparable to those of the fund. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting capitalgroup.com/afis.

Calendar year total returns



Highest/Lowest quarterly results during this period were:

Highest 8.44% (quarter ended March 31, 2019)

Lowest -5.61% (quarter ended December 31, 2018)

Average annual total returns For the periods ended December 31, 2019:	1 year	5 years	Lifetime
Fund (inception date – 5/1/14)	18.16%	5.13%	4.53%
MSCI All Country World Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	26.60	8.41	7.74
Bloomberg Barclays U.S. Aggregate Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	8.72	3.05	3.21
70%/30% MSCI ACWI/Bloomberg Barclays Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	21.21	6.95	6.52
Lipper Global Equity Income Funds Average (reflects no deduction for sales charges, account fees or U.S. federal income taxes)	21.01	6.20	5.38

Management

Investment adviser Capital Research and Management Company℠

Portfolio managers The individuals primarily responsible for the portfolio management of the fund are:

Portfolio manager/ Series title (if applicable)	Portfolio manager experience in this fund	Primary title with investment adviser
Alfonso Barroso	Less than 1 year	Partner – Capital Research Global Investors
Grant L. Cambridge	Less than 1 year	Partner – Capital International Investors
Joyce E. Gordon	Less than 1 year	Partner – Capital Research Global Investors
David A. Hoag	Less than 1 year	Partner – Capital Fixed Income Investors
Winnie Kwan	Less than 1 year	Partner – Capital Research Global Investors

Philip Winston	6 years	Partner – Capital International Investors

Purchase and sale of fund shares Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds — and not the holders of variable insurance contracts — are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

Tax information See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

Payments to broker-dealers and other financial intermediaries The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

You can access the fund's statutory prospectus or SAI at capitalgroup.com/afis.

American Funds Insurance Series®

Capital World Bond Fund

Summary prospectus
Class 1 shares
May 1, 2020

CAPITAL GROUP® | AMERICAN FUNDS®

Beginning on January 1, 2021, as permitted by regulations adopted by the U.S. Securities and Exchange Commission, you may not receive paper copies of the fund's shareholder reports from the insurance company that offers your contract unless you specifically request paper copies from the insurance company or from your financial intermediary. Instead, the shareholder reports will be made available on a website, and the insurance company will notify you by mail each time a report is posted and provide you with a website link to access the report. Instructions for requesting paper copies will be provided by your insurance company. If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the insurance company electronically by following the instructions provided by the insurance company.

You may elect to receive paper copies of all future reports free of charge from the insurance company. You can inform the insurance company that you wish to continue receiving paper copies of your shareholder reports by following the instructions provided by the insurance company. Your election to receive paper reports will apply to all investment options available under your contract.

Before you invest, you may want to review the fund's prospectus and statement of additional information, which contain more information about the fund and its risks. You can find the fund's prospectus, statement of additional information, reports to shareholders and other information about the fund online at capitalgroup.com/afis. You can also get this information at no cost by calling (800) 421-9900, ext. 65413 or by sending an email request to afisclass1@americanfunds.com. The current prospectus and statement of additional information, dated May 1, 2020, are incorporated by reference into this summary prospectus.

Investment objective The fund's investment objective is to provide you, over the long term, with a high level of total return consistent with prudent investment management. Total return comprises the income generated by the fund and the changes in the market value of the fund's investments.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy and hold an interest in Class 1 shares of the fund. It does not reflect insurance contract fees and expenses. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	**Class 1**
Management fee	0.53%
Other expenses	0.06
Total annual fund operating expenses	0.59
Fee waiver*	0.10
Total annual fund operating expenses after fee waiver	0.49

* The investment adviser is currently waiving a portion of its management fee equal to .10% of the fund's net assets. This waiver will be in effect through at least May 1, 2021. The waiver may only be modified or terminated with the approval of the fund's board.

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest $10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. The example reflects the fee waiver described above through the expiration date of such waiver and total annual fund operating expenses thereafter. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	**3 years**	**5 years**	**10 years**
Class 1	$50	$179	$319	$728

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 159% of the average value of its portfolio.

Principal investment strategies Under normal market circumstances, the fund invests at least 80% of its assets in bonds and other debt securities, which may be represented by other investment instruments, including derivatives. The fund invests primarily in debt securities, including asset-backed and mortgage-backed securities and securities of governmental, supranational and corporate issuers denominated in various currencies, including U.S. dollars. The fund may invest substantially in securities of issuers domiciled outside the United States, including issuers domiciled in developing countries. Normally, the fund invests substantially in investment-grade bonds (rated Baa3 or better or BBB– or better by Nationally Recognized Statistical Rating Organizations designated by the fund's investment adviser or unrated but determined to be of equivalent quality by the fund's investment adviser). The fund may also invest up to 25% of its assets in lower quality, higher yielding debt securities (rated Ba1 or below and BB+ or below by Nationally Recognized Statistical Rating Organizations designated by the fund's investment adviser or unrated but determined to be of equivalent quality by the fund's investment adviser). Such securities are sometimes referred to as "junk bonds." The total return of the fund will be the result of interest income, changes in the market value of the fund's investments and changes in the values of other currencies relative to the U.S. dollar.

The fund may invest in certain derivative instruments. A derivative is a financial contract, the value of which is based on the value of an underlying financial asset (such as a stock, bond or currency), a reference rate or a market index. The fund may invest in a derivative only if, in the opinion of the investment adviser, the expected risks and rewards of the proposed investment are consistent with the investment objective and strategies of the fund as disclosed in this prospectus and in the fund's statement of additional information.

The fund is nondiversified, which allows it to invest a greater percentage of its assets in any one issuer than would otherwise be the case. However, the fund intends to limit its investments in the securities of any single issuer.

Prior to May 1, 2020, the fund was called Global Bond Fund.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively priced securities that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time.

Market conditions — The prices of, and the income generated by, the securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Issuer risks — The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in debt instruments — The prices of, and the income generated by, bonds and other debt securities held by the fund may be affected by changing interest rates and by changes in the effective maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. A general rise in interest rates may cause investors to sell debt securities on a large scale, which could also adversely affect the price and liquidity of debt securities and could also result in increased redemptions from the fund. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in the fund failing to recoup the full amount of its initial investment and having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer or guarantor will weaken or be perceived to be weaker, and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. A downgrade or default affecting any of the fund's securities could cause the value of the fund's shares to decrease. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which the fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not guarantees as to credit quality or an evaluation of market risk. The fund's investment adviser relies on its own credit analysts to research issuers and issues in seeking to assess credit and default risks.

Liquidity risk — Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

Investing in lower rated debt instruments — Lower rated bonds and other lower rated debt securities generally have higher rates of interest and involve greater risk of default or price declines due to changes in the issuer's creditworthiness than those of higher quality debt securities. The market prices of these securities may fluctuate more than the prices of higher quality debt securities and may decline significantly in periods of general economic difficulty. These risks may be increased with respect to investments in junk bonds.

Currency — The prices of, and the income generated by, many debt securities held by the fund may also be affected by changes in relative currency values. If the U.S. dollar appreciates against foreign currencies, the value in U.S. dollars of the fund's securities denominated in such currencies would generally fall and vice versa. U.S. dollar-denominated securities of foreign issuers may also be affected by changes in relative currency values.

Investing in derivatives — The use of derivatives involves a variety of risks, which may be different from, or greater than, the risks associated with investing in traditional securities, such as stocks and bonds. Changes in the value of a derivative may not correlate perfectly with, and may be more sensitive to market events than, the underlying asset, rate or index, and a derivative instrument may expose the fund to losses in excess of its initial investment. Derivatives may be difficult to value, difficult for the fund to buy or sell at an opportune time or price and difficult, or even impossible, to terminate or otherwise offset. The fund's use of derivatives may result in losses to the fund, and investing in derivatives may reduce the fund's returns and increase the fund's price volatility. The fund's counterparty to a derivative transaction (including, if applicable, the fund's clearing broker, the derivatives exchange or the clearinghouse) may be unable or unwilling to honor its financial obligations in respect of the transaction. In certain cases, the fund may be hindered or delayed in exercising remedies against or closing out derivative instruments with a counterparty, which may result in additional losses.

Investing in inflation-linked bonds — The values of inflation-linked bonds generally fluctuate in response to changes in real interest rates — i.e., rates of interest after factoring in inflation. A rise in real interest rates may cause the prices of inflation-linked securities to fall, while a decline in real interest rates may cause the prices to increase. Inflation-linked bonds may experience greater losses than other debt securities with similar durations when real interest rates rise faster than nominal interest rates. There can be no assurance that the value of an inflation-linked security will be directly correlated to changes in interest rates; for example, if interest rates rise for reasons other than inflation, the increase may not be reflected in the security's inflation measure.

Investing in inflation-linked bonds may also reduce the fund's distributable income during periods of deflation. If prices for goods and services decline throughout the economy, the principal and income on inflation-linked securities may decline and result in losses to the fund.

Investing outside the United States — Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Investing in emerging markets — Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, emerging market countries may have less developed legal and accounting systems than those in developed countries. The governments of these countries may be less stable and more likely to impose capital controls, nationalize a company or industry, place restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or impose punitive taxes that could adversely affect the prices of securities. In addition, the economies of these countries may be dependent on relatively few industries that are more susceptible to local and global changes. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, emerging markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

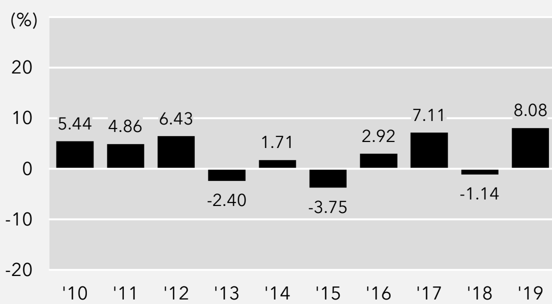
Nondiversification risk — As a nondiversified fund, the fund has the ability to invest a larger percentage of its assets in the securities of a smaller number of issuers than a diversified fund. Although the fund does not intend to limit its investments to the securities of a small number of issuers, if it were to do so, poor performance by a single large holding could adversely impact the fund's investment results more than if the fund were invested in a larger number of issuers.

Management — The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. This information provides some indication of the risks of investing in the fund. The Lipper Global Income Funds Average includes funds that disclose investment objectives and/or strategies reasonably comparable to those of the fund. The Consumer Price Index provides a comparison of the fund's results to inflation. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting capitalgroup.com/afis.

Calendar year total returns



Highest/Lowest quarterly results during this period were:

Highest 7.96% (quarter ended September 30, 2010)

Lowest -6.13% (quarter ended December 31, 2016)

Average annual total returns For the periods ended December 31, 2019:	1 year	5 years	10 years	Lifetime
Fund (inception date – 10/4/06)	8.08%	2.54%	2.85%	4.07%
Bloomberg Barclays Global Aggregate Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	6.84	2.31	2.48	3.59
Lipper Global Income Funds Average (reflects no deduction for sales charges, account fees or U.S. federal income taxes)	8.19	2.51	3.14	N/A
Consumer Price Index	2.29	1.82	1.75	1.80

Management

Investment adviser Capital Research and Management Company℠

Portfolio managers The individuals primarily responsible for the portfolio management of the fund are:

Portfolio manager/ Series title (if applicable)	Portfolio manager experience in this fund	Primary title with investment adviser
Andrew A. Cormack	1 year	Vice President – Capital Fixed Income Investors
David A. Daigle	5 years	Partner – Capital Fixed Income Investors
Thomas H. Høgh	14 years	Partner – Capital Fixed Income Investors
Robert H. Neithart	7 years	Partner – Capital Fixed Income Investors

Purchase and sale of fund shares Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds — and not the holders of variable insurance contracts — are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

Tax information See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

Payments to broker-dealers and other financial intermediaries The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

You can access the fund's statutory prospectus or SAI at capitalgroup.com/afis.

American Funds Insurance Series®
Global Growth Fund

Summary prospectus
Class 1 shares
May 1, 2020

CAPITAL GROUP® | AMERICAN FUNDS®

Beginning on January 1, 2021, as permitted by regulations adopted by the U.S. Securities and Exchange Commission, you may not receive paper copies of the fund's shareholder reports from the insurance company that offers your contract unless you specifically request paper copies from the insurance company or from your financial intermediary. Instead, the shareholder reports will be made available on a website, and the insurance company will notify you by mail each time a report is posted and provide you with a website link to access the report. Instructions for requesting paper copies will be provided by your insurance company. If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the insurance company electronically by following the instructions provided by the insurance company.

You may elect to receive paper copies of all future reports free of charge from the insurance company. You can inform the insurance company that you wish to continue receiving paper copies of your shareholder reports by following the instructions provided by the insurance company. Your election to receive paper reports will apply to all investment options available under your contract.

Before you invest, you may want to review the fund's prospectus and statement of additional information, which contain more information about the fund and its risks. You can find the fund's prospectus, statement of additional information, reports to shareholders and other information about the fund online at capitalgroup.com/afis. You can also get this information at no cost by calling (800) 421-9900, ext. 65413 or by sending an email request to afisclass1@americanfunds.com. The current prospectus and statement of additional information, dated May 1, 2020, are incorporated by reference into this summary prospectus.

Investment objective The fund's investment objective is to provide long-term growth of capital.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy and hold an interest in Class 1 shares of the fund. It does not reflect insurance contract fees and expenses. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	**Class 1**
Management fee	0.52%
Other expenses	0.05
Total annual fund operating expenses	0.57

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest $10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	**3 years**	**5 years**	**10 years**
Class 1	$58	$183	$318	$714

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 14% of the average value of its portfolio.

Principal investment strategies The fund invests primarily in common stocks of companies around the world that the investment adviser believes have the potential for growth. As a fund that seeks to invest globally, the fund will allocate its assets among securities of companies domiciled in various countries, including the United States and countries with emerging markets (but in no fewer than three countries). Under normal market conditions, the fund will invest significantly in issuers domiciled outside the United States (i.e., at least 40% of its net assets, unless market conditions are not deemed favorable by the fund's investment adviser, in which case the fund would invest at least 30% of its net assets in issuers outside the United States).

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

Market conditions — The prices of, and the income generated by, the common stocks and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Issuer risks — The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in growth-oriented stocks — Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments.

Investing outside the United States — Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

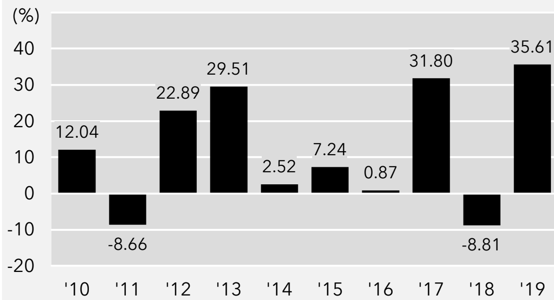
Investing in emerging markets — Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, emerging market countries may have less developed legal and accounting systems than those in developed countries. The governments of these countries may be less stable and more likely to impose capital controls, nationalize a company or industry, place restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or impose punitive taxes that could adversely affect the prices of securities. In addition, the economies of these countries may be dependent on relatively few industries that are more susceptible to local and global changes. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, emerging markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

Management — The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. This information provides some indication of the risks of investing in the fund. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting capitalgroup.com/afis.

Calendar year total returns



Highest/Lowest quarterly results during this period were:

Highest 15.85% (quarter ended March 31, 2019)

Lowest -18.84% (quarter ended September 30, 2011)

Average annual total returns For the periods ended December 31, 2019:	**1 year**	**5 years**	**10 years**	**Lifetime**
Fund (inception date – 4/30/97)	35.61%	12.01%	11.40%	10.21%
MSCI All Country World Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	26.60	8.41	8.79	6.47

Management

Investment adviser Capital Research and Management Company[SM]

Portfolio managers The individuals primarily responsible for the portfolio management of the fund are:

Portfolio manager/ Series title (if applicable)	**Portfolio manager experience in this fund**	**Primary title with investment adviser**
Patrice Collette	5 years	Partner – Capital World Investors
Paul Flynn	3 years	Partner – Capital World Investors
Jonathan Knowles	7 years	Partner – Capital World Investors

Purchase and sale of fund shares Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds — and not the holders of variable insurance contracts — are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

Tax information See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

Payments to broker-dealers and other financial intermediaries The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

You can access the fund's statutory prospectus or SAI at capitalgroup.com/afis.

American Funds Insurance Series®
Global Small Capitalization Fund

Summary prospectus
Class 1 shares
May 1, 2020

CAPITAL GROUP® | AMERICAN FUNDS®

Beginning on January 1, 2021, as permitted by regulations adopted by the U.S. Securities and Exchange Commission, you may not receive paper copies of the fund's shareholder reports from the insurance company that offers your contract unless you specifically request paper copies from the insurance company or from your financial intermediary. Instead, the shareholder reports will be made available on a website, and the insurance company will notify you by mail each time a report is posted and provide you with a website link to access the report. Instructions for requesting paper copies will be provided by your insurance company. If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the insurance company electronically by following the instructions provided by the insurance company.

You may elect to receive paper copies of all future reports free of charge from the insurance company. You can inform the insurance company that you wish to continue receiving paper copies of your shareholder reports by following the instructions provided by the insurance company. Your election to receive paper reports will apply to all investment options available under your contract.

Before you invest, you may want to review the fund's prospectus and statement of additional information, which contain more information about the fund and its risks. You can find the fund's prospectus, statement of additional information, reports to shareholders and other information about the fund online at capitalgroup.com/afis. You can also get this information at no cost by calling (800) 421-9900, ext. 65413 or by sending an email request to afisclass1@americanfunds.com. The current prospectus and statement of additional information, dated May 1, 2020, are incorporated by reference into this summary prospectus.

Investment objective The fund's investment objective is to provide long-term growth of capital.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy and hold an interest in Class 1 shares of the fund. It does not reflect insurance contract fees and expenses. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	**Class 1**
Management fee	0.70%
Other expenses	0.06
Total annual fund operating expenses	0.76

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest $10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	**3 years**	**5 years**	**10 years**
Class 1	$78	$243	$422	$942

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 50% of the average value of its portfolio.

Principal investment strategies Normally, the fund invests at least 80% of its net assets in growth-oriented common stocks and other equity type securities of companies with small market capitalizations, measured at the time of purchase. However, the fund's holdings of small capitalization stocks may fall below the 80% threshold due to subsequent market action. The investment adviser currently defines "small market capitalization" companies as companies with market capitalizations of $6.0 billion or less. The investment adviser has periodically re-evaluated and adjusted this definition and may continue to do so in the future. As a fund that seeks to invest globally, the fund will allocate its assets among securities of companies domiciled in various countries, including the United States and countries with emerging markets (but in no fewer than three countries). Under normal market conditions, the fund will invest significantly in issuers domiciled outside the United States (i.e., at least 40% of its net assets, unless market conditions are not deemed favorable by the fund's investment adviser, in which case the fund would invest at least 30% of its net assets in issuers outside the United States).

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

Market conditions — The prices of, and the income generated by, the common stocks and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Issuer risks — The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in growth-oriented stocks — Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments. These risks may be even greater in the case of smaller capitalization stocks.

Investing in small companies — Investing in smaller companies may pose additional risks. For example, it is often more difficult to value or dispose of small company stocks and more difficult to obtain information about smaller companies than about larger companies. Furthermore, smaller companies often have limited product lines, operating histories, markets and/or financial resources, may be dependent on one or a few key persons for management, and can be more susceptible to losses. Moreover, the prices of their stocks may be more volatile than stocks of larger, more established companies, particularly during times of market turmoil.

Investing outside the United States — Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Investing in emerging markets — Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, emerging market countries may have less developed legal and accounting systems than those in developed countries. The governments of these countries may be less stable and more likely to impose capital controls, nationalize a company or industry, place restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or impose punitive taxes that could adversely affect the prices of securities. In addition, the economies of these countries may be dependent on relatively few industries that are more susceptible to local and global changes. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, emerging markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

Liquidity risk — Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

Management — The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. This information provides some indication of the risks of investing in the fund. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting capitalgroup.com/afis.

Calendar year total returns

Growth Fund

Summary prospectus
Class 1 shares
May 1, 2020

CAPITAL GROUP® | AMERICAN FUNDS®

Beginning on January 1, 2021, as permitted by regulations adopted by the U.S. Securities and Exchange Commission, you may not receive paper copies of the fund's shareholder reports from the insurance company that offers your contract unless you specifically request paper copies from the insurance company or from your financial intermediary. Instead, the shareholder reports will be made available on a website, and the insurance company will notify you by mail each time a report is posted and provide you with a website link to access the report. Instructions for requesting paper copies will be provided by your insurance company. If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the insurance company electronically by following the instructions provided by the insurance company.

You may elect to receive paper copies of all future reports free of charge from the insurance company. You can inform the insurance company that you wish to continue receiving paper copies of your shareholder reports by following the instructions provided by the insurance company. Your election to receive paper reports will apply to all investment options available under your contract.

Before you invest, you may want to review the fund's prospectus and statement of additional information, which contain more information about the fund and its risks. You can find the fund's prospectus, statement of additional information, reports to shareholders and other information about the fund online at capitalgroup.com/afis. You can also get this information at no cost by calling (800) 421-9900, ext. 65413 or by sending an email request to afisclass1@americanfunds.com. The current prospectus and statement of additional information, dated May 1, 2020, are incorporated by reference into this summary prospectus.

Investment objective The fund's investment objective is to provide growth of capital.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy and hold an interest in Class 1 shares of the fund. It does not reflect insurance contract fees and expenses. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	**Class 1**
Management fee	0.32%
Other expenses	0.04
Total annual fund operating expenses	0.36

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest $10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	**3 years**	**5 years**	**10 years**
Class 1	$37	$116	$202	$456

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 21% of the average value of its portfolio.

Principal investment strategies The fund invests primarily in common stocks and seeks to invest in companies that appear to offer superior opportunities for growth of capital. The fund may invest up to 25% of its assets in common stocks and other securities of issuers domiciled outside the United States.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

Market conditions — The prices of, and the income generated by, the common stocks and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Issuer risks — The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in growth-oriented stocks — Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments. These risks may be even greater in the case of smaller capitalization stocks.

Investing outside the United States — Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

The example assumes that you invest $10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	**3 years**	**5 years**	**10 years**
Class 1	$31	$97	$169	$381

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 27% of the average value of its portfolio.

Principal investment strategies The fund invests primarily in common stocks or other securities that the investment adviser believes demonstrate the potential for appreciation and/or dividends. The fund may invest up to 15% of its assets, at the time of purchase, in securities of issuers domiciled outside the United States. The fund is designed for investors seeking both capital appreciation and income.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

Market conditions — The prices of, and the income generated by, the common stocks and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Issuer risks — The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in growth-oriented stocks — Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments.

Investing in income-oriented stocks — The value of the fund's securities and income provided by the fund may be reduced by changes in the dividend policies of, and the capital resources available for dividend payments at, the companies in which the fund invests.

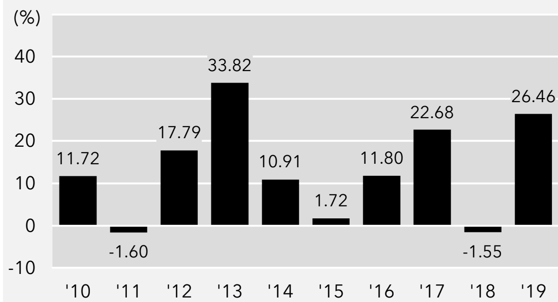
Investing outside the United States — Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Management — The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. This information provides some indication of the risks of investing in the fund. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting capitalgroup.com/afis.

Calendar year total returns



Highest/Lowest quarterly results during this period were:

Highest 12.40% (quarter ended March 31, 2019)

Lowest -14.80% (quarter ended September 30, 2011)

Average annual total returns For the periods ended December 31, 2019:	**1 year**	**5 years**	**10 years**	**Lifetime**
Fund (inception date – 2/8/84)	26.46%	11.68%	12.81%	11.46%
S&P 500 Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	31.49	11.70	13.56	11.45

Management

Investment adviser Capital Research and Management Company[SM]

Portfolio managers The individuals primarily responsible for the portfolio management of the fund are:

Portfolio manager/ Series title (if applicable)	**Portfolio manager experience in this fund**	**Primary title with investment adviser**
Donald D. O'Neal Co-President and Trustee	15 years	Partner – Capital International Investors
Keiko McKibben Vice President	6 years	Partner – Capital Research Global Investors
Dylan Yolles Vice President	15 years	Partner – Capital International Investors
Charles E. Ellwein	5 years	Partner – Capital Research Global Investors
J. Blair Frank	14 years	Partner – Capital Research Global Investors
Claudia P. Huntington	26 years	Partner – Capital Research Global Investors
William L. Robbins	8 years	Partner – Capital International Investors

Purchase and sale of fund shares Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds — and not the holders of variable insurance contracts — are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

Tax information See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

Payments to broker-dealers and other financial intermediaries The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

You can access the fund's statutory prospectus or SAI at capitalgroup.com/afis.

International Fund

Summary prospectus
Class 1 shares
May 1, 2020

CAPITAL GROUP® | AMERICAN FUNDS®

Beginning on January 1, 2021, as permitted by regulations adopted by the U.S. Securities and Exchange Commission, you may not receive paper copies of the fund's shareholder reports from the insurance company that offers your contract unless you specifically request paper copies from the insurance company or from your financial intermediary. Instead, the shareholder reports will be made available on a website, and the insurance company will notify you by mail each time a report is posted and provide you with a website link to access the report. Instructions for requesting paper copies will be provided by your insurance company. If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the insurance company electronically by following the instructions provided by the insurance company.

You may elect to receive paper copies of all future reports free of charge from the insurance company. You can inform the insurance company that you wish to continue receiving paper copies of your shareholder reports by following the instructions provided by the insurance company. Your election to receive paper reports will apply to all investment options available under your contract.

Before you invest, you may want to review the fund's prospectus and statement of additional information, which contain more information about the fund and its risks. You can find the fund's prospectus, statement of additional information, reports to shareholders and other information about the fund online at capitalgroup.com/afis. You can also get this information at no cost by calling (800) 421-9900, ext. 65413 or by sending an email request to afisclass1@americanfunds.com. The current prospectus and statement of additional information, dated May 1, 2020, are incorporated by reference into this summary prospectus.

Investment objective The fund's investment objective is to provide long-term growth of capital.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy and hold an interest in Class 1 shares of the fund. It does not reflect insurance contract fees and expenses. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	**Class 1**
Management fee	0.49%
Other expenses	0.06
Total annual fund operating expenses	0.55

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest $10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	**3 years**	**5 years**	**10 years**
Class 1	$56	$176	$307	$689

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 32% of the average value of its portfolio.

Principal investment strategies The fund invests primarily in common stocks of companies domiciled outside the United States, including companies domiciled in emerging markets, that the investment adviser believes have the potential for growth.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

Market conditions — The prices of, and the income generated by, the common stocks and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Issuer risks — The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in growth-oriented stocks — Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments.

Investing outside the United States — Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Investing in emerging markets — Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, emerging market countries may have less developed legal and accounting systems than those in developed countries. The governments of these countries may be less stable and more likely to impose capital controls, nationalize a company or industry, place restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or impose punitive taxes that could adversely affect the prices of securities. In addition, the economies of these countries may be dependent on relatively few industries that are more susceptible to local and global changes. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, emerging markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

Management — The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. This information provides some indication of the risks of investing in the fund. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. Summary prospectus
Class 1 shares
May 1, 2020

CAPITAL GROUP® | AMERICAN FUNDS®

Beginning on January 1, 2021, as permitted by regulations adopted by the U.S. Securities and Exchange Commission, you may not receive paper copies of the fund's shareholder reports from the insurance company that offers your contract unless you specifically request paper copies from the insurance company or from your financial intermediary. Instead, the shareholder reports will be made available on a website, and the insurance company will notify you by mail each time a report is posted and provide you with a website link to access the report. Instructions for requesting paper copies will be provided by your insurance company. If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the insurance company electronically by following the instructions provided by the insurance company.

You may elect to receive paper copies of all future reports free of charge from the insurance company. You can inform the insurance company that you wish to continue receiving paper copies of your shareholder reports by following the instructions provided by the insurance company. Your election to receive paper reports will apply to all investment options available under your contract.

Before you invest, you may want to review the fund's prospectus and statement of additional information, which contain more information about the fund and its risks. You can find the fund's prospectus, statement of additional information, reports to shareholders and other information about the fund online at capitalgroup.com/afis. You can also get this information at no cost by calling (800) 421-9900, ext. 65413 or by sending an email request to afisclass1@americanfunds.com. The current prospectus and statement of additional information, dated May 1, 2020, are incorporated by reference into this summary prospectus.

Investment objective The fund's investment objective is long-term capital appreciation.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy and hold an interest in Class 1 shares of the fund. It does not reflect insurance contract fees and expenses. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	**Class 1**
Management fee	0.70%
Other expenses	0.07
Total annual fund operating expenses	0.77
Fee waiver*	0.18
Total annual fund operating expenses after fee waiver	0.59

* The investment adviser is currently waiving a portion of its management fee equal to .18% of the fund's net assets. This waiver will be in effect through at least May 1, 2021. The waiver may only be modified or terminated with the approval of the fund's board.

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest $10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. The example reflects the fee waiver described above through the expiration date of such waiver and total annual fund operating expenses thereafter. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	**3 years**	**5 years**	**10 years**
Class 1	$60	$228	$410	$937

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 38% of the average value of its portfolio.

Principal investment strategies The fund invests primarily in common stocks of companies with significant exposure to countries with developing economies and/or markets. The securities markets of these countries may be referred to as emerging markets. The fund may invest in equity securities of any company, regardless of where it is based (including developed countries), if the fund's investment adviser determines that a significant portion of the company's assets or revenues (generally 20% or more) is attributable to developing countries.

Under normal market conditions, the fund invests at least 35% of its assets in equity and debt securities of issuers primarily based in qualified countries that have developing economies and/or markets. The fund may also, to a limited extent, invest in securities of issuers based in nonqualified developing countries.

In determining whether a country is qualified, the fund's investment adviser considers such factors as the country's per capita gross domestic product, the percentage of the country's economy that is industrialized, market capital as a percentage of gross domestic product, the overall regulatory environment, the presence of government regulation limiting or banning foreign ownership, and restrictions on repatriation of initial capital, dividends, interest and/or capital gains. The fund's investment adviser maintains a list of qualified countries and securities in which the fund may invest.

The fund may also invest in debt securities of issuers, including issuers of lower rated bonds (rated Ba1 or below and BB+ or below by Nationally Recognized Statistical Rating Organizations designated by the fund's investment adviser or unrated but determined to be of equivalent quality by the fund's investment adviser), with exposure to these countries. Bonds rated Ba1 or BB+ or below are sometimes referred to as "junk bonds."

In addition, the fund may invest in nonconvertible debt securities of issuers, including issuers of lower rated bonds and government bonds, that are primarily based in qualified countries or that have a significant portion of their assets or revenues attributable to developing countries.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

Market conditions — The prices of, and the income generated by, the common stocks and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Issuer risks — The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in growth-oriented stocks — Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments. These risks may be even greater in the case of smaller capitalization stocks.

Investing outside the United States — Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in developing countries.

Investing in developing countries — Investing in countries with developing economies and/or markets may involve risks in addition to and greater than those generally associated with investing in developed countries. For instance, emerging market countries may have less developed legal and accounting systems than those in developed countries. The governments of these countries may be less stable and more likely to impose capital controls, nationalize a company or industry, place restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or impose punitive taxes that could adversely affect the prices of securities. In addition, the economies of these countries may be dependent on relatively few industries that are more susceptible to local and global changes. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, emerging markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

Investing in debt instruments — The prices of, and the income generated by, bonds and other debt securities held by the fund may be affected by changing interest rates and by changes in the effective maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. A general rise in interest rates may cause investors to sell debt securities on a large scale, which could also adversely affect the price and liquidity of debt securities and could also result in increased redemptions from the fund. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in the fund failing to recoup the full amount of its initial investment and having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer or guarantor will weaken or be perceived to be weaker, and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. A downgrade or default affecting any of the fund's securities could cause the value of the fund's shares to decrease. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which the fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not guarantees as to credit quality or an evaluation of market risk. The fund's investment adviser relies on its own credit analysts to research issuers and issues in seeking to assess credit and default risks.

Investing in lower rated debt instruments — Lower rated bonds and other lower rated debt securities generally have higher rates of interest and involve greater risk of default or price declines due to changes in the issuer's creditworthiness than those of higher quality debt securities. The market prices of these securities may fluctuate more than the prices of higher quality debt securities and may decline significantly in periods of general economic difficulty. These risks may be increased with respect to investments in junk bonds.

Liquidity risk — Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

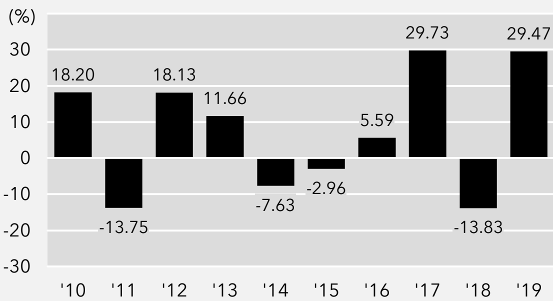
Investing in small companies — Investing in smaller companies may pose additional risks. For example, it is often more difficult to value or dispose of small company stocks and more difficult to obtain information about smaller companies than about larger companies. Furthermore, smaller companies often have limited product lines, operating histories, markets and/or financial resources, may be dependent on one or a few key persons for management, and can be more susceptible to losses. Moreover, the prices of their stocks may be more volatile than stocks of larger, more established companies, particularly during times of market turmoil.

Management — The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. This information provides some indication of the risks of investing in the fund. The MSCI Emerging Markets Index reflects the market sectors in which the fund invests. The J.P. Morgan Emerging Markets Bond Index (EMBI) Global Diversified reflects the bond market sectors in which the fund invests. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting capitalgroup.com/afis.

Calendar year total returns



Highest/Lowest quarterly results during this period were:

Highest 17.56% (quarter ended September 30, 2010)

Lowest -18.91% (quarter ended September 30, 2011)

Average annual total returns For the periods ended December 31, 2019:	1 year	5 years	10 years	Lifetime
Fund (inception date – 6/17/99)	29.47%	8.20%	6.30%	8.49%
MSCI All Country World Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	26.60	8.41	8.79	5.15
MSCI Emerging Markets Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	18.42	5.61	3.68	7.43
J.P. Morgan Emerging Markets Bond Index (EMBI) Global Diversified (reflects no deductions for account fees, expenses or U.S. federal income taxes)	15.05	6.24	6.90	9.15

Management

Investment adviser Capital Research and Management Company[SM]

Portfolio managers The individuals primarily responsible for the portfolio management of the fund are:

Tomonori Tani	2 years	Partner – Capital World Investors
Lisa Thompson	Less than 1 year	Partner – Capital International Investors
Christopher Thomsen	Less than 1 year	Partner – Capital Research Global Investors

Purchase and sale of fund shares Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds — and not the holders of variable insurance contracts — are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

Tax information See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

Payments to broker-dealers and other financial intermediaries The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

You can access the fund's statutory prospectus or SAI at capitalgroup.com/afis.

Vanguard®

Vanguard Variable Insurance Fund
Capital Growth Portfolio
Summary Prospectus

April 28, 2020

The Portfolio's statutory Prospectus and Statement of Additional Information dated April 28, 2020, as may be amended or supplemented, are incorporated into and made part of this Summary Prospectus by reference.

Before you invest, you may want to review the Portfolio's Prospectus, which contains more information about the Portfolio and its risks. You can find the Portfolio's Prospectus and other information about the Portfolio online at www.vanguard.com/prospectus. You can also obtain this information at no cost by calling 800-522-5555 or by sending an email request to online@vanguard.com.

See the inside front cover for important information about access to your fund's annual and semiannual shareholder reports.

The Securities and Exchange Commission (SEC) has not approved or disapproved these securities or passed upon the adequacy of this prospectus. Any representation to the contrary is a criminal offense.

Important information about access to shareholder reports

Beginning on January 1, 2021, as permitted by regulations adopted by the SEC, paper copies of your fund's annual and semiannual shareholder reports will no longer be sent to you by mail, unless you specifically request them. Instead, you will be notified by mail each time a report is posted on the website and will be provided with a link to access the report.

If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the fund electronically by contacting your financial intermediary (such as a broker-dealer or bank) or, if you invest directly with the fund, by calling Vanguard at one of the phone numbers on the back cover of this prospectus or by logging on to *vanguard.com*.

You may elect to receive paper copies of all future shareholder reports free of charge. If you invest through a financial intermediary, you can contact the intermediary to request that you continue to receive paper copies. If you invest directly with the fund, you can call Vanguard at one of the phone numbers on the back cover of this prospectus or log on to *vanguard.com*. Your election to receive paper copies will apply to all the funds you hold through an intermediary or directly with Vanguard.

Investment Objective

The Portfolio seeks to provide long-term capital appreciation.

Fees and Expenses

The following table describes the fees and expenses you may pay if you buy and hold shares of the Portfolio. The expenses shown in the table and in the example that follows do not reflect additional fees and expenses associated with the annuity or life insurance program through which you invest. If those additional fees and expenses were included, overall expenses would be higher.

Annual Portfolio Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.33%
12b-1 Distribution Fee	None
Other Expenses	0.01%
Total Annual Portfolio Operating Expenses	0.34%

Example

The following example is intended to help you compare the cost of investing in the Portfolio with the cost of investing in other mutual funds. It illustrates the hypothetical expenses that you would incur over various periods if you were to invest $10,000 in the Portfolio's shares. This example assumes that the Portfolio provides a return of 5% each year and that total annual portfolio operating expenses remain as stated in the preceding table. You would incur these hypothetical expenses whether or not you were to redeem your investment at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
$35	$109	$191	$431

Portfolio Turnover

The Portfolio pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual portfolio operating expenses or in the previous expense example, reduce the Portfolio's performance. During the most recent fiscal year, the Portfolio's turnover rate was 5% of the average value of its portfolio.

Principal Investment Strategies

The Portfolio invests in stocks considered to have above-average earnings growth potential that is not reflected in their current market prices. The Portfolio consists predominantly of large- and mid-capitalization stocks.

Principal Risks

An investment in the Portfolio could lose money over short or long periods of time. You should expect the Portfolio's share price and total return to fluctuate within a wide range. The Portfolio is subject to the following risks, which could affect the Portfolio's performance:

- *Stock market risk*, which is the chance that stock prices overall will decline. Stock markets tend to move in cycles, with periods of rising prices and periods of falling prices.
- *Asset concentration risk*, which is the chance that, because the Portfolio tends to invest a high percentage of assets in its ten largest holdings, the Portfolio's performance may be hurt disproportionately by the poor performance of relatively few stocks.

• *Investment style risk*, which is the chance that returns from large- and mid-capitalization growth stocks will trail returns from the overall stock market. Large- and mid-cap stocks each tend to go through cycles of doing better—or worse—than other segments of the stock market or the stock market in general. These periods have, in the past, lasted for as long as several years. Historically, mid-cap stocks have been more volatile in price than large-cap stocks. The stock prices of mid-size companies tend to experience greater volatility because, among other things, these companies tend to be more sensitive to changing economic conditions.

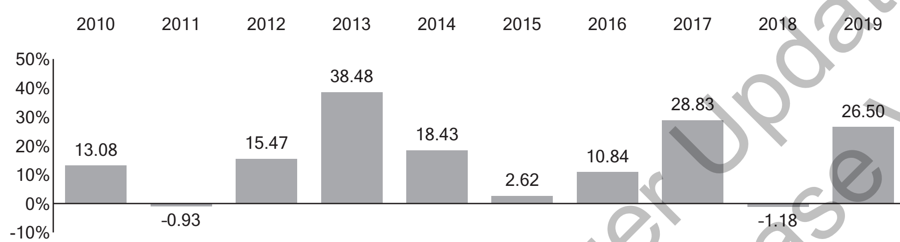
• *Manager risk*, which is the chance that poor security selection will cause the Portfolio to underperform relevant benchmarks or other funds with a similar investment objective. In addition, significant investments in the health care and information technology sectors subject the Portfolio to proportionately higher exposure to the risks of these sectors.

An investment in the Portfolio is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.

Annual Total Returns

The following bar chart and table are intended to help you understand the risks of investing in the Portfolio. The bar chart shows how the performance of the Portfolio has varied from one calendar year to another over the periods shown. The table shows how the average annual total returns of the Portfolio compare with those of a relevant market index, which has investment characteristics similar to those of the Portfolio. The Portfolio's returns are net of its expenses, but do not reflect additional fees and expenses that are deducted by the annuity or life insurance program through which you invest. If such fees and expenses were included in the calculation of the Portfolio's returns, the returns would be lower. Keep in mind that the Portfolio's past performance does not indicate how the Portfolio will perform in the future. Updated performance information is available on our website for Financial Advisors at *advisors.vanguard.com* or by calling Vanguard toll-free at 800-522-5555.

Annual Total Returns — Capital Growth Portfolio



During the periods shown in the bar chart, the highest and lowest returns for a calendar quarter were:

	Total Return	Quarter
Highest	13.95%	March 31, 2013
Lowest	-15.36%	September 30, 2011

Average Annual Total Returns for Periods Ended December 31, 2019

	1 Year	5 Years	10 Years
Capital Growth Portfolio	26.50%	12.87%	14.54%
Standard & Poor's 500 Index (reflects no deduction for fees or expenses)	31.49%	11.70%	13.56%

Alfred W. Mordecai, Vice Chairman of PRIMECAP. He has co-managed the Portfolio since its inception in 2002.

M. Mohsin Ansari, Executive Vice President of PRIMECAP. He has co-managed the Portfolio since 2007.

James Marchetti, Executive Vice President, Portfolio Manager, and Principal of PRIMECAP. He has co-managed the Portfolio since 2015.

Tax Information

The Portfolio normally distributes its net investment income and net realized capital gains, if any, to its shareholders, which are the insurance company separate accounts that sponsor your variable annuity or variable life insurance contract. The tax consequences to you of your investment in the Portfolio depend on the provisions of the annuity or life insurance contract through which you invest. For more information on taxes, please refer to the prospectus of the annuity or life insurance contract through which Portfolio shares are offered.

Payments to Financial Intermediaries

The Portfolio and its investment advisor do not pay financial intermediaries for sales of Portfolio shares.

Summary Prospectus

April 28, 2020

The Portfolio's statutory Prospectus and Statement of Additional Information dated April 28, 2020, as may be amended or supplemented, are incorporated into and made part of this Summary Prospectus by reference.

Before you invest, you may want to review the Portfolio's Prospectus, which contains more information about the Portfolio and its risks. You can find the Portfolio's Prospectus and other information about the Portfolio online at www.vanguard.com/prospectus. You can also obtain this information at no cost by calling 800-522-5555 or by sending an email request to online@vanguard.com.

See the inside front cover for important information about access to your fund's annual and semiannual shareholder reports.

Important information about access to shareholder reports

Beginning on January 1, 2021, as permitted by regulations adopted by the SEC, paper copies of your fund's annual and semiannual shareholder reports will no longer be sent to you by mail, unless you specifically request them. Instead, you will be notified by mail each time a report is posted on the website and will be provided with a link to access the report.

If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the fund electronically by contacting your financial intermediary (such as a broker-dealer or bank) or, if you invest directly with the fund, by calling Vanguard at one of the phone numbers on the back cover of this prospectus or by logging on to *vanguard.com*.

You may elect to receive paper copies of all future shareholder reports free of charge. If you invest through a financial intermediary, you can contact the intermediary to request that you continue to receive paper copies. If you invest directly with the fund, you can call Vanguard at one of the phone numbers on the back cover of this prospectus or log on to *vanguard.com*. Your election to receive paper copies will apply to all the funds you hold through an intermediary or directly with Vanguard.

Investment Objective

The Portfolio seeks to provide an above-average level of current income and reasonable long-term capital appreciation.

Fees and Expenses

The following table describes the fees and expenses you may pay if you buy and hold shares of the Portfolio. The expenses shown in the table and in the example that follows do not reflect additional fees and expenses associated with the annuity or life insurance program through which you invest. If those additional fees and expenses were included, overall expenses would be higher.

Annual Portfolio Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.28%
12b-1 Distribution Fee	None
Other Expenses	0.02%
Total Annual Portfolio Operating Expenses	0.30%

Example

The following example is intended to help you compare the cost of investing in the Portfolio with the cost of investing in other mutual funds. It illustrates the hypothetical expenses that you would incur over various periods if you were to invest $10,000 in the Portfolio's shares. This example assumes that the Portfolio provides a return of 5% each year and that total annual portfolio operating expenses remain as stated in the preceding table. You would incur these hypothetical expenses whether or not you were to redeem your investment at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
$31	$97	$169	$381

Portfolio Turnover

The Portfolio pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual portfolio operating expenses or in the previous expense example, reduce the Portfolio's performance. During the most recent fiscal year, the Portfolio's turnover rate was 33% of the average value of its portfolio.

Principal Investment Strategies

The Portfolio invests mainly in common stocks of mid-size and large companies whose stocks typically pay above-average levels of dividend income and are, in the opinion of the purchasing advisor, undervalued relative to similar stocks. In addition, the advisors generally look for companies that they believe are committed to paying dividends consistently. Under normal circumstances, the Portfolio will invest at least 80% of its assets in equity securities. The Portfolio's 80% policy may be changed only upon 60 days' notice to shareholders. The Portfolio uses multiple investment advisors. Each advisor independently selects and maintains a portfolio of common stocks for the Portfolio.

Principal Risks

An investment in the Portfolio could lose money over short or long periods of time. You should expect the Portfolio's share price and total return to fluctuate within a wide range. The Portfolio is subject to the following risks, which could affect the Portfolio's performance:

• *Stock market risk*, which is the chance that stock prices overall will decline. Stock markets tend to move in cycles, with periods of rising prices and periods of falling prices.

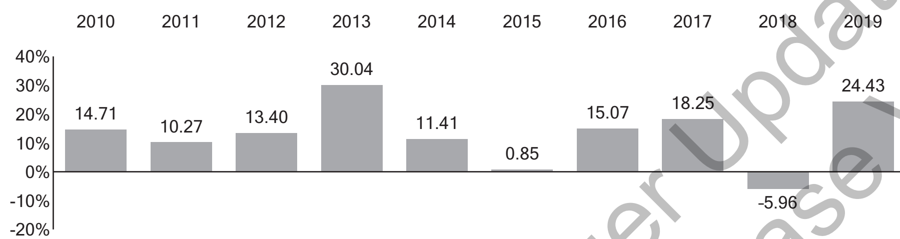
- *Investment style risk*, which is the chance that returns from mid- and large-capitalization dividend-paying value stocks will trail returns from the overall stock market. Mid- and large-cap stocks each tend to go through cycles of doing better—or worse—than other segments of the stock market or the stock market in general. These periods have, in the past, lasted for as long as several years. Historically, mid-cap stocks have been more volatile in price than large-cap stocks. The stock prices of mid-size companies tend to experience greater volatility because, among other things, these companies tend to be more sensitive to changing economic conditions.
- *Manager risk*, which is the chance that poor security selection will cause the Portfolio to underperform relevant benchmarks or other funds with a similar investment objective.

An investment in the Portfolio is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.

Annual Total Returns

The following bar chart and table are intended to help you understand the risks of investing in the Portfolio. The bar chart shows how the performance of the Portfolio has varied from one calendar year to another over the periods shown. The table shows how the average annual total returns of the Portfolio compare with those of a relevant market index and a comparative benchmark, which have investment characteristics similar to those of the Portfolio. The Portfolio's returns are net of its expenses but do not reflect additional fees and expenses that are deducted by the annuity or life insurance program through which you invest. If such fees and expenses were included in the calculation of the Portfolio's returns, the returns would be lower. Returns for the Variable Insurance Equity Income Funds Average are derived from data provided by Lipper, a Thomson Reuters Company. Keep in mind that the Portfolio's past performance does not indicate how the Portfolio will perform in the future. Updated performance information is available on our website for Financial Advisors at *advisors.vanguard.com* or by calling Vanguard toll-free at 800-522-5555.

Annual Total Returns — Equity Income Portfolio



During the periods shown in the bar chart, the highest and lowest returns for a calendar quarter were:

	Total Return	Quarter
Highest	13.79%	December 31, 2011
Lowest	-10.71%	September 30, 2011

Average Annual Total Returns for Periods Ended December 31, 2019

	1 Year	5 Years	10 Years

Your election to receive paper copies will apply to all the funds you hold through an intermediary or directly with Vanguard.

Investment Objective

The Portfolio seeks to provide long-term capital appreciation.

Fees and Expenses

The following table describes the fees and expenses you may pay if you buy and hold shares of the Portfolio. The expenses shown in the table and in the example that follows do not reflect additional fees and expenses associated with the annuity or life insurance program through which you invest. If those additional fees and expenses were included, overall expenses would be higher.

Annual Portfolio Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.36%
12b-1 Distribution Fee	None
Other Expenses	0.02%
Total Annual Portfolio Operating Expenses	0.38%

Example

The following example is intended to help you compare the cost of investing in the Portfolio with the cost of investing in other mutual funds. It illustrates the hypothetical expenses that you would incur over various periods if you were to invest $10,000 in the Portfolio's shares. This example assumes that the Portfolio provides a return of 5% each year and that total annual portfolio operating expenses remain as stated in the preceding table. You would incur these hypothetical expenses whether or not you were to redeem your investment at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
$39	$122	$213	$480

Portfolio Turnover

The Portfolio pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual portfolio operating expenses or in the previous expense example, reduce the Portfolio's performance. During the most recent fiscal year, the Portfolio's turnover rate was 14% of the average value of its portfolio.

Principal Investment Strategies

The Portfolio invests predominantly in the stocks of companies located outside the United States and is expected to diversify its assets in countries across developed and emerging markets. In selecting stocks, the Portfolio's advisors evaluate foreign markets around the world and choose large-, mid-, and small-capitalization companies considered to have above-average growth potential. The Portfolio uses multiple investment advisors. Each advisor independently selects and maintains a portfolio of common stocks for the Portfolio.

Principal Risks

An investment in the Portfolio could lose money over short or long periods of time. You should expect the Portfolio's share price and total return to fluctuate within a wide range. The Portfolio is subject to the following risks, which could affect the Portfolio's performance:

- *Investment style risk*, which is the chance that returns from non-U.S. growth stocks and, to the extent that the Portfolio is invested in them, small- and mid-capitalization stocks, will trail returns from global stock markets. Historically, non-U.S. small- and mid-cap stocks have been more volatile in price than the large-cap stocks that dominate the global markets, and they often perform quite differently.

• *Stock market risk*, which is the chance that stock prices overall will decline. Stock markets tend to move in cycles, with periods of rising prices and periods of falling prices. In addition, investments in foreign stocks can be riskier than U.S. stock investments. Foreign stocks may be more volatile and less liquid than U.S. stocks. The prices of foreign stocks and the prices of U.S. stocks may move in opposite directions.

• *Country/regional risk*, which is the chance that world events—such as political upheaval, financial troubles, or natural disasters—will adversely affect the value of securities issued by companies in foreign countries or regions. Because the Portfolio may invest a large portion of its assets in securities of companies located in any one country or region, including emerging markets, the Portfolio's performance may be hurt disproportionately by the poor performance of its investments in that area. Country/regional risk is especially high in emerging markets.

• *Currency risk*, which is the chance that the value of a foreign investment, measured in U.S. dollars, will decrease because of unfavorable changes in currency exchange rates. Currency risk is especially high in emerging markets.

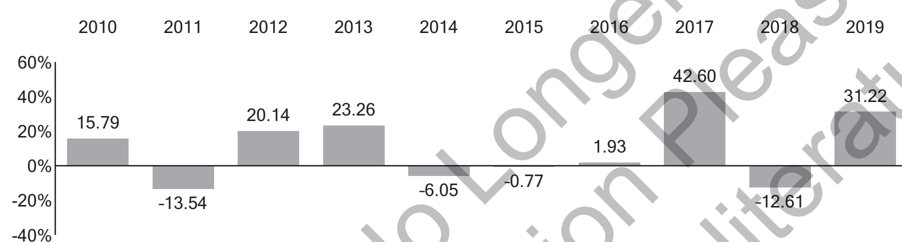
• *Manager risk*, which is the chance that poor security selection will cause the Portfolio to underperform relevant benchmarks or other funds with a similar investment objective. In addition, significant investment in the consumer discretionary sector subjects the Portfolio to proportionately higher exposure to the risks of this sector.

An investment in the Portfolio is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.

Annual Total Returns

The following bar chart and table are intended to help you understand the risks of investing in the Portfolio. The bar chart shows how the performance of the Portfolio has varied from one calendar year to another over the periods shown. The table shows how the average annual total returns of the Portfolio compare with those of a relevant market index and a comparative index, which have investment characteristics similar to those of the Portfolio. The Spliced International Index reflects the performance of the MSCI EAFE Index through May 31, 2010, and the MSCI ACWI ex USA Index thereafter. MSCI ACWI ex USA Index returns are adjusted for withholding taxes. The Portfolio's returns are net of its expenses but do not reflect additional fees and expenses that are deducted by the annuity or life insurance program through which you invest. If such fees and expenses were included in the calculation of the Portfolio's returns, the returns would be lower. Keep in mind that the Portfolio's past performance does not indicate how the Portfolio will perform in the future. Updated performance information is available on our website for Financial Advisors at *advisors.vanguard.com* or by calling Vanguard toll-free at 800-522-5555.

Annual Total Returns — International Portfolio



During the periods shown in the bar chart, the highest and lowest returns for a calendar quarter were:

	Total Return	Quarter
Highest	19.66%	September 30, 2010
Lowest	-22.20%	September 30, 2011

Average Annual Total Returns for Periods Ended December 31, 2019

	1 Year	5 Years	10 Years
International Portfolio	31.22%	10.59%	8.70%
Comparative Indexes (reflect no deduction for fees or expenses)			
MSCI ACWI ex USA Index	21.51%	5.51%	4.97%
Spliced International Index	21.51	5.51	4.68

You can find the Portfolio's Prospectus and other information about the Portfolio online at www.vanguard.com/prospectus. You can also obtain this information at no cost by calling 800-522-5555 or by sending an email request to online@vanguard.com.

See the inside front cover for important information about access to your fund's annual and semiannual shareholder reports.

Important information about access to shareholder reports

Beginning on January 1, 2021, as permitted by regulations adopted by the SEC, paper copies of your fund's annual and semiannual shareholder reports will no longer be sent to you by mail, unless you specifically request them. Instead, you will be notified by mail each time a report is posted on the website and will be provided with a link to access the report.

If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the fund electronically by contacting your financial intermediary (such as a broker-dealer or bank) or, if you invest directly with the fund, by calling Vanguard at one of the phone numbers on the back cover of this prospectus or by logging on to *vanguard.com*.

You may elect to receive paper copies of all future shareholder reports free of charge. If you invest through a financial intermediary, you can contact the intermediary to request that you continue to receive paper copies. If you invest directly with the fund, you can call Vanguard at one of the phone numbers on the back cover of this prospectus or log on to *vanguard.com*. Your election to receive paper copies will apply to all the funds you hold through an intermediary or directly with Vanguard.

Investment Objective

The Portfolio seeks to provide long-term capital appreciation.

Fees and Expenses

The following table describes the fees and expenses you may pay if you buy and hold shares of the Portfolio. The expenses shown in the table and in the example that follows do not reflect additional fees and expenses associated with the annuity or life insurance program through which you invest. If those additional fees and expenses were included, overall expenses would be higher.

Annual Portfolio Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.30%
12b-1 Distribution Fee	None
Other Expenses	0.02%
Total Annual Portfolio Operating Expenses	0.32%

Example

The following example is intended to help you compare the cost of investing in the Portfolio with the cost of investing in other mutual funds. It illustrates the hypothetical expenses that you would incur over various periods if you were to invest $10,000 in the Portfolio's shares. This example assumes that the Portfolio provides a return of 5% each year and that total annual portfolio operating expenses remain as stated in the preceding table. You would incur these hypothetical expenses whether or not you were to redeem your investment at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
$33	$103	$180	$406

Portfolio Turnover

The Portfolio pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual portfolio operating expenses or in the previous expense example, reduce the Portfolio's performance. During the most recent fiscal year, the Portfolio's turnover rate was 58% of the average value of its portfolio.

Principal Investment Strategies

Under normal circumstances, the Portfolio invests at least 80% of its assets primarily in common stocks of small companies. These companies tend to be unseasoned but are considered by the Portfolio's advisors to have superior growth potential. Also, these companies often provide little or no dividend income. The Portfolio's 80% policy may be changed only upon 60 days' notice to shareholders. The Portfolio uses multiple investment advisors. Each advisor independently selects and maintains a portfolio of common stocks for the Portfolio.

Principal Risks

An investment in the Portfolio could lose money over short or long periods of time. You should expect the Portfolio's share price and total return to fluctuate within a wide range. The Portfolio is subject to the following risks, which could affect the Portfolio's performance:

- *Stock market risk*, which is the chance that stock prices overall will decline. Stock markets tend to move in cycles, with periods of rising prices and periods of falling prices.

• *Investment style risk*, which is the chance that returns from small-capitalization growth stocks will trail returns from the overall stock market. Historically, small-cap stocks have been more volatile in price than the large-cap stocks that dominate the overall market, and they often perform quite differently. The stock prices of small companies tend to experience greater volatility because, among other things, these companies tend to be more sensitive to changing economic conditions.

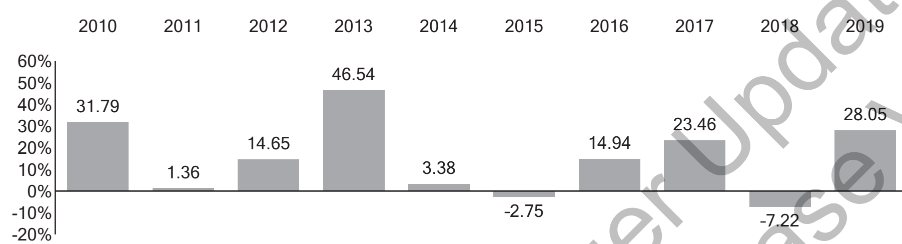
• *Manager risk*, which is the chance that poor security selection will cause the Portfolio to underperform relevant benchmarks or other funds with a similar investment objective. In addition, significant investments in the health care, industrial, and information technology sectors subject the Portfolio to proportionately higher exposure to the risks of these sectors.

An investment in the Portfolio is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.

Annual Total Returns

The following bar chart and table are intended to help you understand the risks of investing in the Portfolio. The bar chart shows how the performance of the Portfolio has varied from one calendar year to another over the periods shown. The table shows how the average annual total returns of the Portfolio compare with those of a relevant market index, which has investment characteristics similar to those of the Portfolio. The Portfolio's returns are net of its expenses but do not reflect additional fees and expenses that are deducted by the annuity or life insurance program through which you invest. If such fees and expenses were included in the calculation of the Portfolio's returns, the returns would be lower. Keep in mind that the Portfolio's past performance does not indicate how the Portfolio will perform in the future. Updated performance information is available on our website for Financial Advisors at *advisors.vanguard.com* or by calling Vanguard toll-free at 800-522-5555.

Annual Total Returns — Small Company Growth Portfolio



During the periods shown in the bar chart, the highest and lowest returns for a calendar quarter were:

	Total Return	Quarter
Highest	17.62%	March 31, 2019
Lowest	-20.83%	December 31, 2018

Average Annual Total Returns for Periods Ended December 31, 2019

	1 Year	5 Years	10 Years
Small Company Growth Portfolio	28.05%	10.39%	14.29%
Russell 2500 Growth Index (reflects no deduction for fees or expenses)	32.65%	10.84%	14.01%

Investment Advisors

ArrowMark Colorado Holdings, LLC (ArrowMark Partners)

The Vanguard Group, Inc. (Vanguard)

Portfolio Managers

Chad Meade, Partner and Portfolio Manager of ArrowMark Partners. He has co-managed a portion of the Portfolio since 2016.

Brian Schaub, CFA, Partner and Portfolio Manager of ArrowMark Partners. He has co-managed a portion of the Portfolio since 2016.

James P. Stetler, Senior Portfolio Manager at Vanguard. He has managed a portion of the Portfolio since 2008 (co-managed since 2012).

Binbin Guo, Ph.D., Principal of Vanguard and head of the Alpha Equity Investment team within Vanguard's Quantitative Equity Group. He has co-managed a portion of the Portfolio since 2016.

Tax Information

The Portfolio normally distributes its net investment income and net realized capital gains, if any, to its shareholders, which are the insurance company separate accounts that sponsor your variable annuity or variable life insurance contract. The tax consequences to you of your investment in the Portfolio depend on the provisions of the annuity or life insurance contract through which you invest. For more information on taxes, please refer to the prospectus of the annuity or life insurance contract through which Portfolio shares are offered.

Payments to Financial Intermediaries

The Portfolio and its investment advisors do not pay financial intermediaries for sales of Portfolio shares.

+ The mutual fund's shares, as applicable, became available as followed for investment by the Investment Division: JNL Aggressive Growth Allocation Fund - Class I - September 25, 2017; JNL Conservative Allocation Fund - Class I - September 25, 2017; JNL Growth Allocation Fund - Class I - September 25, 2017.

* These amounts represent the dividends, excluding distributions of capital gains, received by the Investment Division from the underlying Fund for the period indicated divided by the average net assets for the period indicated. In some instances, the investment income ratio may be rounded to 0.00% even though the Investment Division received dividend income from the Underlying Fund. The investment income ratio for Investment Divisions initially funded during the period presented have not been annualized.

† Total return for period indicated, includes changes in the value of the underlying Fund, and reflects deductions for all items included in the expense ratio. The total return does not include any expense assessed through the redemption of units, inclusion of these expenses in the calculation would result in a reduction in the total return presented. Total return for Investment Divisions with no assets at period end is calculated based on the total return of the underlying Fund less expenses that are charged directly to that Investment Division of the Separate Account. See Note 3 in the Notes to Financial Statements for additional detail on fund expenses. Total return is not annualized if the underlying Investment Division was initially added and funded.

^ Annualized contract expense of Investment Divisions of the Separate Account, consist primarily of mortality and expense charges, for each period indicated. The ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the underlying Funds are excluded.

¥ Some investments have a net asset and ending unit balance of less than one thousand, due to rounding it is displayed as a zero.

‡ Total return is calculated from the effective date or the date available for investment presented in (+) footnote through the end of the reporting period and is not annualized. The effective date is the date when the optional benefit in the variable account was elected by a contract owner.

+ The mutual fund's shares, as applicable, became available as followed for investment by the Investment Division: JNL Multi-Manager Alternative Fund - Class A - April 27, 2015; JNL Multi-Manager International Small Cap Fund - Class A - August 13, 2018; JNL Multi-Manager Mid Cap Fund - Class A - September 19, 2016; JNL Multi-Manager Mid Cap Fund - Class I - September 25, 2017; JNL Multi-Manager Small Cap Growth Fund - Class I - September 25, 2017.

* These amounts represent the dividends, excluding distributions of capital gains, received by the Investment Division from the underlying Fund for the period indicated divided by the average net assets for the period indicated. In some instances, the investment income ratio may be rounded to 0.00% even though the Investment Division received dividend income from the Underlying Fund. The investment income ratio for Investment Divisions initially funded during the period presented have not been annualized.

† Total return for period indicated, includes changes in the value of the underlying Fund, and reflects deductions for all items included in the expense ratio. The total return does not include any expense assessed through the redemption of units, inclusion of these expenses in the calculation would result in a reduction in the total return presented. Total return for Investment Divisions with no assets at period end is calculated based on the total return of the underlying Fund less expenses that are charged directly to that Investment Division of the Separate Account. See Note 3 in the Notes to Financial Statements for additional detail on fund expenses. Total return is not annualized if the underlying Investment Division was initially added and funded.

^ Annualized contract expense of Investment Divisions of the Separate Account, consist primarily of mortality and expense charges, for each period indicated. The ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the underlying Funds are excluded.

¥ Some investments have a net asset and ending unit balance of less than one thousand, due to rounding it is displayed as a zero.

‡ Total return is calculated from the effective date or the date available for investment presented in (+) footnote through the end of the reporting period and is not annualized. The effective date is the date when the optional benefit in the variable account was elected by a contract owner.

\+ The mutual fund's shares, as applicable, became available as followed for investment by the Investment Division: JNL/American Funds Growth Allocation Fund - Class I - September 25, 2017; JNL/American Funds Growth Fund - Class I - September 25, 2017; JNL/American Funds Growth-Income Fund - Class I - September 25, 2017.

* These amounts represent the dividends, excluding distributions of capital gains, received by the Investment Division from the underlying Fund for the period indicated divided by the average net assets for the period indicated. In some instances, the investment income ratio may be rounded to 0.00% even though the Investment Division received dividend income from the Underlying Fund. The investment income ratio for Investment Divisions initially funded during the period presented have not been annualized.

† Total return for period indicated, includes changes in the value of the underlying Fund, and reflects deductions for all items included in the expense ratio. The total return does not include any expense assessed through the redemption of units, inclusion of these expenses in the calculation would result in a reduction in the total return presented. Total return for Investment Divisions with no assets at period end is calculated based on the total return of the underlying Fund less expenses that are charged directly to that Investment Division of the Separate Account. See Note 3 in the Notes to Financial Statements for additional detail on fund expenses. Total return is not annualized if the underlying Investment Division was initially added and funded.

^ Annualized contract expense of Investment Divisions of the Separate Account, consist primarily of mortality and expense charges, for each period indicated. The ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the underlying Funds are excluded.

¥ Some investments have a net asset and ending unit balance of less than one thousand, due to rounding it is displayed as a zero.

‡ Total return is calculated from the effective date or the date available for investment presented in (+) footnote through the end of the reporting period and is not annualized. The effective date is the date when the optional benefit in the variable account was elected by a contract owner.

† Total return for period indicated, includes changes in the value of the underlying Fund, and reflects deductions for all items included in the expense ratio. The total return does not include any expense assessed through the redemption of units, inclusion of these expenses in the calculation would result in a reduction in the total return presented. Total return for Investment Divisions with no assets at period end is calculated based on the total return of the underlying Fund less expenses that are charged directly to that Investment Division of the Separate Account. See Note 3 in the Notes to Financial Statements for additional detail on fund expenses. Total return is not annualized if the underlying Investment Division was initially added and funded.

^ Annualized contract expense of Investment Divisions of the Separate Account, consist primarily of mortality and expense charges, for each period indicated. The ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the underlying Funds are excluded.

¥ Some investments have a net asset and ending unit balance of less than one thousand, due to rounding it is displayed as a zero.

‡ Total return is calculated from the effective date or the date available for investment presented in (+) footnote through the end of the reporting period and is not annualized. The effective date is the date when the optional benefit in the variable account was elected by a contract owner.

\+ The mutual fund's shares, as applicable, became available as followed for investment by the Investment Division: JNL/Causeway International Value Select Fund - Class I - September 25, 2017; JNL/ClearBridge Large Cap Growth Fund - Class A - September 25, 2017; JNL/ClearBridge Large Cap Growth Fund - Class I - September 25, 2017; JNL/Crescent High Income Fund - Class A - April 25, 2016; JNL/Crescent High Income Fund - Class I - September 25, 2017; JNL/DFA Growth Allocation Fund - Class A - April 24, 2017; JNL/DFA Growth Allocation Fund - Class I - September 25, 2017.

* These amounts represent the dividends, excluding distributions of capital gains, received by the Investment Division from the underlying Fund for the period indicated divided by the average net assets for the period indicated. In some instances, the investment income ratio may be rounded to 0.00% even though the Investment Division received dividend income from the Underlying Fund. The investment income ratio for Investment Divisions initially funded during the period presented have not been annualized.

† Total return for period indicated, includes changes in the value of the underlying Fund, and reflects deductions for all items included in the expense ratio. The total return does not include any expense assessed through the redemption of units, inclusion of these expenses in the calculation would result in a reduction in the total return presented. Total return for Investment Divisions with no assets at period end is calculated based on the total return of the underlying Fund less expenses that are charged directly to that Investment Division of the Separate Account. See Note 3 in the Notes to Financial Statements for additional detail on fund expenses. Total return is not annualized if the underlying Investment Division was initially added and funded.

^ Annualized contract expense of Investment Divisions of the Separate Account, consist primarily of mortality and expense charges, for each period indicated. The ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the underlying Funds are excluded.

¥ Some investments have a net asset and ending unit balance of less than one thousand, due to rounding it is displayed as a zero.

‡ Total return is calculated from the effective date or the date available for investment presented in (+) footnote through the end of the reporting period and is not annualized. The effective date is the date when the optional benefit in the variable account was elected by a contract owner.

\+ The mutual fund's shares, as applicable, became available as followed for investment by the Investment Division: JNL/DoubleLine Total Return Fund - Class I - September 25, 2017; JNL/Eaton Vance Global Macro Absolute Return Advantage Fund - Class I - September 25, 2017; JNL/FAMCO Flex Core Covered Call Fund - Class I - September 25, 2017.

* These amounts represent the dividends, excluding distributions of capital gains, received by the Investment Division from the underlying Fund for the period indicated divided by the average net assets for the period indicated. In some instances, the investment income ratio may be rounded to 0.00% even though the Investment Division received dividend income from the Underlying Fund. The investment income ratio for Investment Divisions initially funded during the period presented have not been annualized.

† Total return for period indicated, includes changes in the value of the underlying Fund, and reflects deductions for all items included in the expense ratio. The total return does not include any expense assessed through the redemption of units, inclusion of these expenses in the calculation would result in a reduction in the total return presented. Total return for Investment Divisions with no assets at period end is calculated based on the total return of the underlying Fund less expenses that are charged directly to that Investment Division of the Separate Account. See Note 3 in the Notes to Financial Statements for additional detail on fund expenses. Total return is not annualized if the underlying Investment Division was initially added and funded.

^ Annualized contract expense of Investment Divisions of the Separate Account, consist primarily of mortality and expense charges, for each period indicated. The ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the underlying Funds are excluded.

¥ Some investments have a net asset and ending unit balance of less than one thousand, due to rounding it is displayed as a zero.

‡ Total return is calculated from the effective date or the date available for investment presented in (+) footnote through the end of the reporting period and is not annualized. The effective date is the date when the optional benefit in the variable account was elected by a contract owner.

+ The mutual fund's shares, as applicable, became available as followed for investment by the Investment Division: JNL/Franklin Templeton International Small Cap Fund - Class I - September 25, 2017; JNL/Franklin Templeton Mutual Shares Fund - Class I - September 25, 2017; JNL/GQG Emerging Markets Equity Fund - Class A - September 25, 2017; JNL/GQG Emerging Markets Equity Fund - Class I - September 25, 2017; JNL/Harris Oakmark Global Equity Fund - Class A - April 27, 2015.

* These amounts represent the dividends, excluding distributions of capital gains, received by the Investment Division from the underlying Fund for the period indicated divided by the average net assets for the period indicated. In some instances, the investment income ratio may be rounded to 0.00% even though the Investment Division received dividend income from the Underlying Fund. The investment income ratio for Investment Divisions initially funded during the period presented have not been annualized.

† Total return for period indicated, includes changes in the value of the underlying Fund, and reflects deductions for all items included in the expense ratio. The total return does not include any expense assessed through the redemption of units, inclusion of these expenses in the calculation would result in a reduction in the total return presented. Total return for Investment Divisions with no assets at period end is calculated based on the total return of the underlying Fund less expenses that are charged directly to that Investment Division of the Separate Account. See Note 3 in the Notes to Financial Statements for additional detail on fund expenses. Total return is not annualized if the underlying Investment Division was initially added and funded.

^ Annualized contract expense of Investment Divisions of the Separate Account, consist primarily of mortality and expense charges, for each period indicated. The ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the underlying Funds are excluded.

¥ Some investments have a net asset and ending unit balance of less than one thousand, due to rounding it is displayed as a zero.

‡ Total return is calculated from the effective date or the date available for investment presented in (+) footnote through the end of the reporting period and is not annualized. The effective date is the date when the optional benefit in the variable account was elected by a contract owner.

+ The mutual fund's shares, as applicable, became available as followed for investment by the Investment Division: JNL/JPMorgan Global Allocation Fund - Class I - June 24, 2019; JNL/JPMorgan Hedged Equity Fund - Class A - August 13, 2018; JNL/JPMorgan Hedged Equity Fund - Class I - August 13, 2018; JNL/JPMorgan MidCap Growth Fund - Class I - September 25, 2017; JNL/JPMorgan U.S. Government & Quality Bond Fund - Class I - September 25, 2017.

* These amounts represent the dividends, excluding distributions of capital gains, received by the Investment Division from the underlying Fund for the period indicated divided by the average net assets for the period indicated. In some instances, the investment income ratio may be rounded to 0.00% even though the Investment Division received dividend income from the Underlying Fund. The investment income ratio for Investment Divisions initially funded during the period presented have not been annualized.

† Total return for period indicated, includes changes in the value of the underlying Fund, and reflects deductions for all items included in the expense ratio. The total return does not include any expense assessed through the redemption of units, inclusion of these expenses in the calculation would result in a reduction in the total return presented. Total return for Investment Divisions with no assets at period end is calculated based on the total return of the underlying Fund less expenses that are charged directly to that Investment Division of the Separate Account. See Note 3 in the Notes to Financial Statements for additional detail on fund expenses. Total return is not annualized if the underlying Investment Division was initially added and funded.

^ Annualized contract expense of Investment Divisions of the Separate Account, consist primarily of mortality and expense charges, for each period indicated. The ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the underlying Funds are excluded.

¥ Some investments have a net asset and ending unit balance of less than one thousand, due to rounding it is displayed as a zero.

‡ Total return is calculated from the effective date or the date available for investment presented in (+) footnote through the end of the reporting period and is not annualized. The effective date is the date when the optional benefit in the variable account was elected by a contract owner.

+ The mutual fund's shares, as applicable, became available as followed for investment by the Investment Division: JNL/Mellon Dow Index Fund - Class I - September 25, 2017; JNL/Mellon Emerging Markets Index Fund - Class I - September 25, 2017; JNL/Mellon Energy Sector Fund - Class I - September 25, 2017; JNL/Mellon Equity Income Fund - Class I - September 25, 2017.

* These amounts represent the dividends, excluding distributions of capital gains, received by the Investment Division from the underlying Fund for the period indicated divided by the average net assets for the period indicated. In some instances, the investment income ratio may be rounded to 0.00% even though the Investment Division received dividend income from the Underlying Fund. The investment income ratio for Investment Divisions initially funded during the period presented have not been annualized.

† Total return for period indicated, includes changes in the value of the underlying Fund, and reflects deductions for all items included in the expense ratio. The total return does not include any expense assessed through the redemption of units, inclusion of these expenses in the calculation would result in a reduction in the total return presented. Total return for Investment Divisions with no assets at period end is calculated based on the total return of the underlying Fund less expenses that are charged directly to that Investment Division of the Separate Account. See Note 3 in the Notes to Financial Statements for additional detail on fund expenses. Total return is not annualized if the underlying Investment Division was initially added and funded.

^ Annualized contract expense of Investment Divisions of the Separate Account, consist primarily of mortality and expense charges, for each period indicated. The ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the underlying Funds are excluded.

¥ Some investments have a net asset and ending unit balance of less than one thousand, due to rounding it is displayed as a zero.

‡ Total return is calculated from the effective date or the date available for investment presented in (+) footnote through the end of the reporting period and is not annualized. The effective date is the date when the optional benefit in the variable account was elected by a contract owner.

\+ The mutual fund's shares, as applicable, became available as followed for investment by the Investment Division: JNL/Mellon MSCI KLD 400 Social Index Fund - Class A - April 24, 2017; JNL/Mellon MSCI KLD 400 Social Index Fund - Class I - September 25, 2017; JNL/Mellon MSCI World Index Fund - Class I - September 25, 2017; JNL/Mellon Nasdaq® 100 Index Fund - Class I - September 25, 2017; JNL/Mellon Real Estate Sector Fund - Class A - September 25, 2017.

* These amounts represent the dividends, excluding distributions of capital gains, received by the Investment Division from the underlying Fund for the period indicated divided by the average net assets for the period indicated. In some instances, the investment income ratio may be rounded to 0.00% even though the Investment Division received dividend income from the Underlying Fund. The investment income ratio for Investment Divisions initially funded during the period presented have not been annualized.

† Total return for period indicated, includes changes in the value of the underlying Fund, and reflects deductions for all items included in the expense ratio. The total return does not include any expense assessed through the redemption of units, inclusion of these expenses in the calculation would result in a reduction in the total return presented. Total return for Investment Divisions with no assets at period end is calculated based on the total return of the underlying Fund less expenses that are charged directly to that Investment Division of the Separate Account. See Note 3 in the Notes to Financial Statements for additional detail on fund expenses. Total return is not annualized if the underlying Investment Division was initially added and funded.

^ Annualized contract expense of Investment Divisions of the Separate Account, consist primarily of mortality and expense charges, for each period indicated. The ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the underlying Funds are excluded.

¥ Some investments have a net asset and ending unit balance of less than one thousand, due to rounding it is displayed as a zero.

‡ Total return is calculated from the effective date or the date available for investment presented in (+) footnote through the end of the reporting period and is not annualized. The effective date is the date when the optional benefit in the variable account was elected by a contract owner.

\+ The mutual fund's shares, as applicable, became available as followed for investment by the Investment Division: JNL/Morningstar Wide Moat Index Fund - Class A - August 13, 2018; JNL/Morningstar Wide Moat Index Fund - Class I - August 13, 2018; JNL/Neuberger Berman Currency Fund - Class I - September 25, 2017; JNL/Neuberger Berman Strategic Income Fund - Class I - September 25, 2017.

* These amounts represent the dividends, excluding distributions of capital gains, received by the Investment Division from the underlying Fund for the period indicated divided by the average net assets for the period indicated. In some instances, the investment income ratio may be rounded to 0.00% even though the Investment Division received dividend income from the Underlying Fund. The investment income ratio for Investment Divisions initially funded during the period presented have not been annualized.

† Total return for period indicated, includes changes in the value of the underlying Fund, and reflects deductions for all items included in the expense ratio. The total return does not include any expense assessed through the redemption of units, inclusion of these expenses in the calculation would result in a reduction in the total return presented. Total return for Investment Divisions with no assets at period end is calculated based on the total return of the underlying Fund less expenses that are charged directly to that Investment Division of the Separate Account. See Note 3 in the Notes to Financial Statements for additional detail on fund expenses. Total return is not annualized if the underlying Investment Division was initially added and funded.

^ Annualized contract expense of Investment Divisions of the Separate Account, consist primarily of mortality and expense charges, for each period indicated. The ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the underlying Funds are excluded.

¥ Some investments have a net asset and ending unit balance of less than one thousand, due to rounding it is displayed as a zero.

‡ Total return is calculated from the effective date or the date available for investment presented in (+) footnote through the end of the reporting period and is not annualized. The effective date is the date when the optional benefit in the variable account was elected by a contract owner.

+ The mutual fund's shares, as applicable, became available as followed for investment by the Investment Division: JNL/PPM America High Yield Bond Fund - Class I - September 25, 2017; JNL/PPM America Mid Cap Value Fund - Class I - September 25, 2017; JNL/PPM America Small Cap Value Fund - Class I - September 25, 2017; JNL/PPM America Total Return Fund - Class A - April 25, 2016; JNL/PPM America Total Return Fund - Class I - September 25, 2017.

* These amounts represent the dividends, excluding distributions of capital gains, received by the Investment Division from the underlying Fund for the period indicated divided by the average net assets for the period indicated. In some instances, the investment income ratio may be rounded to 0.00% even though the Investment Division received dividend income from the Underlying Fund. The investment income ratio for Investment Divisions initially funded during the period presented have not been annualized.

† Total return for period indicated, includes changes in the value of the underlying Fund, and reflects deductions for all items included in the expense ratio. The total return does not include any expense assessed through the redemption of units, inclusion of these expenses in the calculation would result in a reduction in the total return presented. Total return for Investment Divisions with no assets at period end is calculated based on the total return of the underlying Fund less expenses that are charged directly to that Investment Division of the Separate Account. See Note 3 in the Notes to Financial Statements for additional detail on fund expenses. Total return is not annualized if the underlying Investment Division was initially added and funded.

^ Annualized contract expense of Investment Divisions of the Separate Account, consist primarily of mortality and expense charges, for each period indicated. The ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the underlying Funds are excluded.

¥ Some investments have a net asset and ending unit balance of less than one thousand, due to rounding it is displayed as a zero.

‡ Total return is calculated from the effective date or the date available for investment presented in (+) footnote through the end of the reporting period and is not annualized. The effective date is the date when the optional benefit in the variable account was elected by a contract owner.

+ The mutual fund's shares, as applicable, became available as followed for investment by the Investment Division: JNL/S&P Dividend Income & Growth Fund - Class I - September 25, 2017; JNL/S&P International 5 Fund - Class I - September 25, 2017; JNL/S&P Intrinsic Value Fund - Class I - September 25, 2017.

* These amounts represent the dividends, excluding distributions of capital gains, received by the Investment Division from the underlying Fund for the period indicated divided by the average net assets for the period indicated. In some instances, the investment income ratio may be rounded to 0.00% even though the Investment Division received dividend income from the Underlying Fund. The investment income ratio for Investment Divisions initially funded during the period presented have not been annualized.

† Total return for period indicated, includes changes in the value of the underlying Fund, and reflects deductions for all items included in the expense ratio. The total return does not include any expense assessed through the redemption of units, inclusion of these expenses in the calculation would result in a reduction in the total return presented. Total return for Investment Divisions with no assets at period end is calculated based on the total return of the underlying Fund less expenses that are charged directly to that Investment Division of the Separate Account. See Note 3 in the Notes to Financial Statements for additional detail on fund expenses. Total return is not annualized if the underlying Investment Division was initially added and funded.

^ Annualized contract expense of Investment Divisions of the Separate Account, consist primarily of mortality and expense charges, for each period indicated. The ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the underlying Funds are excluded.

¥ Some investments have a net asset and ending unit balance of less than one thousand, due to rounding it is displayed as a zero.

‡ Total return is calculated from the effective date or the date available for investment presented in (+) footnote through the end of the reporting period and is not annualized. The effective date is the date when the optional benefit in the variable account was elected by a contract owner.

\+ The mutual fund's shares, as applicable, became available as followed for investment by the Investment Division: JNL/T. Rowe Price Capital Appreciation Fund - Class I - September 25, 2017; JNL/T. Rowe Price Established Growth Fund - Class I - September 25, 2017; JNL/T. Rowe Price Mid-Cap Growth Fund - Class I - September 25, 2017.

* These amounts represent the dividends, excluding distributions of capital gains, received by the Investment Division from the underlying Fund for the period indicated divided by the average net assets for the period indicated. In some instances, the investment income ratio may be rounded to 0.00% even though the Investment Division received dividend income from the Underlying Fund. The investment income ratio for Investment Divisions initially funded during the period presented have not been annualized.

† Total return for period indicated, includes changes in the value of the underlying Fund, and reflects deductions for all items included in the expense ratio. The total return does not include any expense assessed through the redemption of units, inclusion of these expenses in the calculation would result in a reduction in the total return presented. Total return for Investment Divisions with no assets at period end is calculated based on the total return of the underlying Fund less expenses that are charged directly to that Investment Division of the Separate Account. See Note 3 in the Notes to Financial Statements for additional detail on fund expenses. Total return is not annualized if the underlying Investment Division was initially added and funded.

^ Annualized contract expense of Investment Divisions of the Separate Account, consist primarily of mortality and expense charges, for each period indicated. The ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the underlying Funds are excluded.

¥ Some investments have a net asset and ending unit balance of less than one thousand, due to rounding it is displayed as a zero.

‡ Total return is calculated from the effective date or the date available for investment presented in (+) footnote through the end of the reporting period and is not annualized. The effective date is the date when the optional benefit in the variable account was elected by a contract owner.

\+ The mutual fund's shares, as applicable, became available as followed for investment by the Investment Division: JNL/Vanguard Growth ETF Allocation Fund - Class I - September 25, 2017; JNL/Vanguard International Fund - Class A - September 25, 2017; JNL/Vanguard International Fund - Class I - September 25, 2017; JNL/Vanguard International Stock Market Index Fund - Class A - September 25, 2017; JNL/Vanguard International Stock Market Index Fund - Class I - September 25, 2017; JNL/Vanguard Moderate ETF Allocation Fund - Class A - September 25, 2017; JNL/Vanguard Moderate ETF Allocation Fund - Class I - September 25, 2017.

* These amounts represent the dividends, excluding distributions of capital gains, received by the Investment Division from the underlying Fund for the period indicated divided by the average net assets for the period indicated. In some instances, the investment income ratio may be rounded to 0.00% even though the Investment Division received dividend income from the Underlying Fund. The investment income ratio for Investment Divisions initially funded during the period presented have not been annualized.

† Total return for period indicated, includes changes in the value of the underlying Fund, and reflects deductions for all items included in the expense ratio. The total return does not include any expense assessed through the redemption of units, inclusion of these expenses in the calculation would result in a reduction in the total return presented. Total return for Investment Divisions with no assets at period end is calculated based on the total return of the underlying Fund less expenses that are charged directly to that Investment Division of the Separate Account. See Note 3 in the Notes to Financial Statements for additional detail on fund expenses. Total return is not annualized if the underlying Investment Division was initially added and funded.

^ Annualized contract expense of Investment Divisions of the Separate Account, consist primarily of mortality and expense charges, for each period indicated. The ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the underlying Funds are excluded.

¥ Some investments have a net asset and ending unit balance of less than one thousand, due to rounding it is displayed as a zero.

‡ Total return is calculated from the effective date or the date available for investment presented in (+) footnote through the end of the reporting period and is not annualized. The effective date is the date when the optional benefit in the variable account was elected by a contract owner.

\+ The mutual fund's shares, as applicable, became available as followed for investment by the Investment Division: JNL/WMC Value Fund - Class I - September 25, 2017; JNL/Epoch Global Shareholder Yield Fund - Class I - September 25, 2017.

* These amounts represent the dividends, excluding distributions of capital gains, received by the Investment Division from the underlying Fund for the period indicated divided by the average net assets for the period indicated. In some instances, the investment income ratio may be rounded to 0.00% even though the Investment Division received dividend income from the Underlying Fund. The investment income ratio for Investment Divisions initially funded during the period presented have not been annualized.

† Total return for period indicated, includes changes in the value of the underlying Fund, and reflects deductions for all items included in the expense ratio. The total return does not include any expense assessed through the redemption of units, inclusion of these expenses in the calculation would result in a reduction in the total return presented. Total return for Investment Divisions with no assets at period end is calculated based on the total return of the underlying Fund less expenses that are charged directly to that Investment Division of the Separate Account. See Note 3 in the Notes to Financial Statements for additional detail on fund expenses. Total return is not annualized if the underlying Investment Division was initially added and funded.

^ Annualized contract expense of Investment Divisions of the Separate Account, consist primarily of mortality and expense charges, for each period indicated. The ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the underlying Funds are excluded.

¥ Some investments have a net asset and ending unit balance of less than one thousand, due to rounding it is displayed as a zero.

\# The period is from January 1, 2019 through June 24, 2019 the date the Fund was acquired. The respective acquisitions can be found in Note 1 in the Notes to Financial Statements. Unit values disclosed are as of June 21, 2019. For periods less than one year, ratios have not been annualized.

‡ Total return is calculated from the effective date or the date available for investment presented in (+) footnote through the end of the reporting period and is not annualized. The effective date is the date when the optional benefit in the variable account was elected by a contract owner.

NOTE 1. Organization

Jackson National Life Insurance Company ("Jackson") established Jackson National Separate Account I (the "Separate Account") on June 14, 1993. The Separate Account commenced operations on October 16, 1995, and is a unit investment trust registered with the Securities Exchange Commission (the "SEC") under the Investment Company Act of 1940, as amended. The Separate Account is an Investment Company and follows accounting and reporting guidance under Financial Accounting Standards Board "FASB" Accounting Standards Codification (ASC) Topic 946 Financial Services – Investment Companies.

The Separate Account is a separate investment account of Jackson, its assets legally belong to Jackson and the obligations under the contracts are the obligation of Jackson. However, the contract assets in the Separate Account are not chargeable with liabilities arising out of any other business Jackson may conduct.

The Separate Account receives and invests, based on the directions of the contract owners, net premiums for individual flexible premium variable annuity contracts issued by Jackson. The contracts can be purchased on a non-tax qualified basis or in connection with certain plans qualifying for favorable federal income tax treatment. The Separate Account contained three-hundred fifteen (315) Investment Divisions during 2019, but currently contains three-hundred three (303) Investment Divisions as of December 31, 2019. These Investment Divisions each invested in shares of the following mutual funds (collectively, the "Funds") during the year ended December 31, 2019:

JNL/PPM America Long Short Credit Fund	JNL/PPM America High Yield Bond Fund	June 24, 2019

The Net assets are affected by the investment results of each fund, equity transactions by contract owners and certain contract expenses. The accompanying financial statements include only contract owners' purchase payments pertaining to the variable portions of their contracts and exclude any purchase payments for fixed dollar benefits, the latter being included in the accounts of JNAM.

A contract owner may choose from among a number of different underlying mutual fund options. The underlying mutual fund options are not available to the general public directly. The underlying mutual funds are available as investment options in variable life insurance policies or variable annuity contracts issued by life insurance companies or, in some cases, through participation in certain qualified pension or retirement plans.

Some of the underlying mutual funds have been established by investment advisers which manage publicly traded mutual funds having similar names and investment objectives. While some of the underlying mutual funds may be similar to, and may in fact be modeled after publicly traded mutual funds, the underlying mutual funds are not otherwise directly related to any publicly traded mutual fund. Consequently, the investment performance of publicly traded mutual funds and any corresponding underlying mutual funds may differ substantially.

A purchase payment could be presented as a negative equity transaction in the Statements of Changes in Net Assets if a prior period purchase payment is refunded to a contract owner due to a contract cancellation during the free look period, and /or if a gain is realized by the contract owner during the free look period.

JNAM allocates purchase payments to Investment Divisions as instructed by the contract owner. Shares of the Investment Divisions are purchased at Net Asset Value, then converted into accumulation units. Certain transactions may be subject to conditions imposed by the underlying mutual funds, as well as those set forth in the contract.

NOTE 2. Significant Accounting Policies
The following is a summary of significant accounting policies followed by the Separate Account in the preparation of its financial statements in conformity with U.S. generally accepted accounting principles ("GAAP").

Use of Estimates. The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of increase and decrease in net assets from operations during the reporting period. Actual results could differ from those estimates.

Investments. The Separate Account's Investment Divisions' investments in the corresponding Funds are stated at the closing net asset value ("NAV") of the respective Fund, which represent fair value. The average cost method is used in determining the cost of the shares sold on withdrawals by the Investment Divisions of the Separate Account. Investments in the Funds are recorded on trade date for financial reporting purposes. Realized gain distributions and dividend income distributions received from the Funds are reinvested in additional shares of the Funds and are recorded as gain or income to the Investment Divisions of the Separate Account on the ex-dividend date.

Federal Income Taxes. The operations of the Separate Account are taxed as part of the operations of Jackson, which is taxed as a "life insurance company" under the provisions of the Internal Revenue Code. Under current law, no federal income taxes are payable with respect to the Separate Account. Therefore, no federal income tax provision is required. Taxes are generally the responsibility of the contract owner upon termination or withdrawal.

FASB ASC Topic 820, "Fair Value Measurement". As of December 31, 2019, all of the Separate Account's Investment Divisions' investment in each of the corresponding Funds are valued at the daily reported net asset value ("NAV") of the applicable Underlying Fund. Investments in the Underlying Funds are categorized as Level 1 within FASB ASC Topic 820 fair value hierarchy. On each valuation date, the NAV of each corresponding Fund is generally determined once each day on which the New York Stock Exchange ("NYSE") is open, at the close of the regular trading session of the NYSE (generally, 4:00 PM Eastern Time). The characterization of the underlying securities held by the Funds in accordance with FASB ASC Topic 820 differs from the characterization of the Separate Account's Investment Divisions' investment in the corresponding Funds. Although there can be no assurance, in general, the fair value of the investment is the amount the owner of such investment might reasonably expect to receive in an orderly transaction between market participants upon its current sale.

NOTE 3. Contract Charges
Under the term of the contracts, certain charges are allocated to the contract owner to compensate Jackson for providing the insurance benefits set forth in the contracts, administering the contracts, distributing the contracts, and assuming certain risks in connection with the contracts. These charges result in a reduction in contract unit value or redemptions of contract units in the number of contract units outstanding.

Contract Owner Charges. The following charges are assessed to the contract owner by redemption of contract units outstanding:

Contract Maintenance Charge. An annual contract maintenance charge of $35 - $240 is charged against each contract to reimburse Jackson for expenses incurred in establishing and maintaining records relating to the contract. The contract maintenance charge is assessed on each anniversary of the contract date that occurs prior to the annuity date, on contract monthly anniversary or in conjunction with a total withdrawal, as applicable. This charge is specifically imposed to a contract if the contract value is less than $50,000 on the date when the charge is assessed. The charge is deducted by redemption of contract units.

Transfer Charge. A transfer charge of $25 will apply to transfers made by contract owners between the Investment Divisions in excess of 15 transfers in a contract year. Contract year is defined as the succeeding twelve months from the contract issue date. Jackson may waive the transfer charge in connection with pre-authorized automatic transfer programs, or in those states where a lesser charge is required. This charge will be deducted from the amount transferred prior to the allocation to a different Investment Division.

Surrender or Contingent Deferred Sales Charge. During the first three to nine contract years, certain contracts include a provision for a charge upon the surrender or partial surrender of the contract. The amount assessed under the contract terms, if any, depends upon the cost associated with distributing the particular contract. The amount, if any, is determined based on a number of factors, including the amount withdrawn, the contract year of surrender, or the number and amount of withdrawals in a calendar year. The surrender charges are assessed by Jackson and withheld from the proceeds of the withdrawals.

Guaranteed Minimum Optional Benefit Charges. The following contract owner charges are guaranteed minimum optional benefit charges:

Guaranteed Minimum Income Benefit Charge. If this benefit has been selected, Jackson will assess an annual charge of 0.40% to 0.87%, depending on the contract, of the Guaranteed Minimum Income Benefit ("GMIB") base. The charge will be deducted each calendar quarter from the contract value by redemption of contract units.

Guaranteed Minimum Accumulation Benefit Charge. If this benefit has been selected, Jackson will assess an annual charge of 1.00% to 1.02% of the Guaranteed Value ("GV"). The charge will be deducted each calendar quarter from the contract value by redemption of contract units.

Guaranteed Minimum Withdrawal Benefit Charge. If this benefit has been selected, Jackson will assess an annual charge of 0.50% to 3.00%, depending on the contract of the Guaranteed Withdrawal Balance ("GWB"). The charge will be deducted each calendar quarter from the contract value by redemption of contract units.

Guaranteed Minimum Death Benefit Charge. If any of the optional death benefits are selected that are available under the contract, Jackson will assess an annual charge of 0.20% to 2.50%, depending on the contract of the Death Benefit base. The charge will be deducted each contract quarter from the contract value by redemption of contract units.

Asset-based Charges. The following charges are assessed to the contract owner by a reduction in contract unit value:

Insurance Charges. Jackson deducts a daily charge for administrative expenses from the net assets of the Separate Account equivalent to an annual rate of 0.15%. In designated products, this expense is waived for contracts valued greater than $1 million, refer to the product prospectus for eligibility. The administration charge is designed to reimburse Jackson for expenses incurred in administering the Separate Account and its contracts and reduces the contract unit value.

Jackson deducts a daily base contract charge from the net assets of the Separate Account equivalent to an annual rate of 0.00% to 1.65% for the assumption of mortality and expense risks. The mortality risk assumed by Jackson is that the insured may receive benefits greater than those anticipated by Jackson. The expense risk assumed by Jackson is that the actual cost of administering the contracts of the Separate Account may exceed the amount received from the Administration Charge and the Contract Maintenance Charge.

Optional Benefit Charges. The following contract owner charges are optional benefit charges:

Earnings Protection Benefit Charge. If this benefit option has been selected, Jackson will make an additional deduction of 0.20% to 0.70%, depending on the contract chosen, on an annual basis of the average daily net assets of the contract owner's allocations to the Investment Divisions.

Contract Enhancement Charge. If one of the contract enhancement benefits is selected, then for a period of five to nine contract years, Jackson will make an additional deduction based upon the average daily net assets of the contract owner's allocations to the Investment Divisions. The amounts of these charges depend upon the contract enhancements selected and range from 0.395% to 0.832%.

Withdrawal Charge Period. If the optional three, four, or five-year withdrawal charge period feature is selected, Jackson will deduct 0.45%, 0.40%, or 0.30%, respectively, on an annual basis of the average daily net assets of the contract owner's allocations to the Investment Divisions.

20% Additional Free Withdrawal Charge. If a contract owner selects the optional feature that permits you to withdraw up to 20% of premiums that are still subject to a withdrawal charge minus earnings during a contract year without withdrawal charge, Jackson will deduct 0.30% to 0.40% on an annual basis of the average daily net assets of the contract owner's allocations to the Investment Divisions.

Optional Death Benefit Charges. If any of the optional death benefits are selected that are available under the contract, Jackson will make an additional deduction of 0.15% to 0.80% on an annual basis of the average daily net assets the contract owner's allocations to the Investment Divisions, based on the optional death benefit selected.

Premium Taxes. Some states and other governmental entities charge premium taxes or other similar taxes. Jackson pays these taxes and may make a deduction from the value of the contract for them. Premium taxes generally range from 0% to 3.5% depending on the state.

NOTE 4. Related Party Transactions

For contract enhancement benefits related to the optional benefits offered, Jackson contributed $940,434 and $1,362,530 to the Separate Account in the form of additional premium to contract owners' accounts for the years ended December 31, 2019 and 2018, respectively. These amounts are included in purchase payments from contract transactions.

Contract owners may, with certain restrictions, transfer their assets between the Separate Account and a fixed dollar contract (fixed account) maintained in the accounts of Jackson. These transfers are the result of the contract owner executing fund exchanges. Fund exchanges from the Separate Account to the fixed account are included in transfers between investment divisions, and fund exchanges from the fixed account to the Separate Account are included in purchase payments, as applicable, on the accompanying Statements of Changes in Net Assets.

NOTE 5. Subsequent Events
Management has evaluated subsequent events for the Separate Accounts through the date the financial statements are issued and has concluded there are no events that require adjustments to the financial statements or disclosure in the notes.

Report of Independent Registered Public Accounting Firm

To the Board of Directors and Shareholders of Jackson National Life Insurance Company and
Contract Owners of Jackson National Separate Account I:

Opinion on the Financial Statements

We have audited the accompanying statements of assets and liabilities of the Investment Divisions listed in the Appendix that comprise the Jackson National Separate Account I (the Separate Account) as of the date listed in the Appendix, the related statements of operations for the year or period listed in the Appendix and changes in net assets for the years or periods listed in the Appendix, and the related notes (collectively, the financial statements) and the financial highlights for each of the years or periods indicated therein. In our opinion, the financial statements and financial highlights present fairly, in all material respects, the financial position of each Investment Division as of the date listed in the Appendix, the results of its operations for the year or period listed in the Appendix, the changes in its net assets for the years or periods listed in the Appendix, and the financial highlights for each of the years or periods indicated therein, in conformity with U.S. generally accepted accounting principles.

Basis for Opinion

These financial statements and financial highlights are the responsibility of the Separate Account's management. Our responsibility is to express an opinion on these financial statements and financial highlights based on our audits. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) (PCAOB) and are required to be independent with respect to the Separate Account in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements and financial highlights are free of material misstatement, whether due to error or fraud. Our audits included performing procedures to assess the risks of material misstatement of the financial statements and financial highlights, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements and financial highlights. Such procedures also included confirmation of securities owned as of December 31, 2019, by correspondence with the transfer agent of the underlying mutual funds or by other appropriate auditing procedures. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements and financial highlights. We believe that our audits provide a reasonable basis for our opinion.

KPMG LLP

We have served as the auditor of one or more of Jackson National Life Insurance Company's Separate Accounts since 1999.

Report of Independent Registered Public Accounting Firm

To the Stockholder and Board of Directors
Jackson National Life Insurance Company and Subsidiaries:

Opinion on the Consolidated Financial Statements

We have audited the accompanying consolidated balance sheets of Jackson National Life Insurance Company and Subsidiaries (the Company) as of December 31, 2019 and 2018, the related consolidated statements of income, comprehensive income, equity, and cash flows for each of the years in the three-year period ended December 31, 2019, and the related notes (collectively, the consolidated financial statements). In our opinion, the consolidated financial statements present fairly, in all material respects, the financial position of the Company as of December 31, 2019 and 2018, and the results of its operations and its cash flows for each of the years in the three-year period ended December 31, 2019, in conformity with U.S. generally accepted accounting principles.

Basis for Opinion

These consolidated financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these consolidated financial statements based on our audits. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) (PCAOB) and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB and in accordance with auditing standards generally accepted in the United States of America. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the consolidated financial statements are free of material misstatement, whether due to error or fraud. The Company is not required to have, nor were we engaged to perform, an audit of its internal control over financial reporting. As part of our audits, we are required to obtain an understanding of internal control over financial reporting but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control over financial reporting. Accordingly, we express no such opinion. Our audits included performing procedures to assess the risks of material misstatement of the consolidated financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the consolidated financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements. We believe that our audits provide a reasonable basis for our opinion.

/s/KPMG LLP

We have served as the Company's auditor since 1999.

1. Business and Basis of Presentation

Jackson National Life Insurance Company (the "Company" or "Jackson") is wholly owned by Brooke Life Insurance Company ("Brooke Life" or the "Parent"), which is ultimately a wholly owned subsidiary of Prudential plc ("Prudential"), London, England. Jackson, together with its New York life insurance subsidiary, is licensed to sell group and individual annuity products (including immediate, index linked and deferred fixed annuities and variable annuities), guaranteed investment contracts ("GICs") and individual life insurance products, including variable universal life, in all 50 states and the District of Columbia.

The consolidated financial statements include accounts, after the elimination of intercompany accounts and transactions, of the following:

- Life insurers: Jackson and its wholly owned subsidiaries Jackson National Life Insurance Company of New York ("JNY"), Squire Reassurance Company LLC ("Squire Re"), Squire Reassurance Company II, Inc. ("Squire Re II"), VFL International Life Company SPC, LTD and Jackson National Life (Bermuda) LTD;
- Wholly owned broker-dealer, investment management and investment advisor subsidiaries: Jackson National Life Distributors, LLC, Jackson National Asset Management, LLC;
- PGDS (US One) LLC ("PGDS"), a wholly owned subsidiary that provides certain services to Jackson and certain affiliates;
- Other insignificant wholly owned subsidiaries; and
- Other insignificant partnerships, limited liability companies and variable interest entities ("VIEs") in which Jackson is deemed the primary beneficiary.

On August 15, 2017, National Planning Holdings, Inc. ("NPH"), Jackson's affiliated broker-dealer network, announced the sale of its broker-dealer business to LPL Financial LLC ("LPL"). In December 2018, the broker dealer's subsidiaries were consolidated into NPH, which was then contributed to Jackson by its parent, Brooke Life and, subsequently, converted to National Planning Holdings, LLC ("NPH LLC").

Basis of Presentation

The accompanying consolidated financial statements have been prepared in accordance with U.S. generally accepted accounting principles ("GAAP"). Intercompany accounts and transactions have been eliminated upon consolidation.

During 2019, the Company identified an error in the financial statements for the periods ending December 31, 2018 and 2017, related to a miscalculation in an actuarial model, as described below. Management reviewed the impact of the adjustment on these prior periods and determined, taken as a whole, it was immaterial to the prior periods impacted.

In 2017, the Company implemented a revised actuarial model for the valuation of reserves for variable annuity guaranteed benefits. In 2019, management identified a miscalculation in this revised model related to the effect of partial withdrawals on the guaranteed minimum death benefit rollup benefits, which resulted in an overstatement of reserves of $148.2 million and $104.8 million as of December 31, 2018 and 2017, respectively. The Company recorded an immaterial correction to the consolidated financial statements for December 31, 2018, by decreasing reserves for future policy benefits and claims payable by $148.2 million, as well as a resulting increase in deferred acquisition costs and deferred tax asset of $45.4 million and $21.6 million, respectively. As a result, net income increased by $22.7 million and $58.5 million for 2018 and 2017, respectively. The Company also adjusted the corresponding footnotes for 2018 and 2017, where applicable, for this correction.

The preparation of the consolidated financial statements in conformity with GAAP requires the use of estimates and assumptions about future events that affect the amounts reported in the consolidated financial statements and the accompanying notes. Significant estimates or assumptions, as further discussed in the notes, include: 1) valuation of investments and derivative instruments, including fair values of securities deemed to be in an illiquid market and the determination of when an impairment is other-than-temporary; 2) assessments as to whether certain entities are variable interest entities, the existence of reconsideration events and the determination of which party, if any, should consolidate the entity; 3) assumptions impacting estimated future gross profits, including but not limited to, policyholder behavior, mortality rates, expenses, investment returns and policy crediting rates, used in the calculation of amortization of deferred acquisition costs and deferred sales inducements; 4) assumptions used in calculating policy reserves and liabilities, including but not limited to, policyholder behavior, mortality rates, expenses, investment returns and policy crediting rates; 5) assumptions as to future earnings levels being sufficient to realize deferred tax benefits; 6) estimates related to establishment of loan loss reserves, allowances on receivables, liabilities for lawsuits and state guaranty fund assessments; 7) assumptions and estimates associated with the Company's tax positions, including an estimate of the dividends received deduction, which impact the amount of recognized tax benefits recorded by the Company; 8) value of guaranteed benefits; and 9) value of business acquired, its recoverability and amortization. These estimates and assumptions are based on management's best estimates and judgments. Management evaluates its estimates and assumptions on an ongoing basis using historical experience and other factors deemed appropriate. As facts and circumstances dictate, these estimates and assumptions may be adjusted. Since future events and their effects cannot be determined with precision, actual results could differ significantly from these estimates. Changes in estimates, including those resulting from continuing changes in the economic environment, will be reflected in the consolidated financial statements in the periods the estimates are changed.

2. Summary of Significant Accounting Policies

Changes in Accounting Principles – Adopted in Current Year

In February 2016, the Financial Accounting Standards Board ("FASB") issued Accounting Standards Update ("ASU") No. 2016-02, "Leases (Topic 842)," which established a new accounting model for leases. Lessees are required to recognize most leases on the balance sheet as a right-of-use asset and a related lease liability. The lease liability is measured as the present value of the lease payments over the lease term with the right-of-use asset measured at the lease liability amount and adjusted for certain lease incentives and initial direct costs. Lease expense recognition continues to differentiate between finance leases and operating leases resulting in a similar pattern of lease expense recognition as under previous guidance. Effective January 1, 2019, the Company adopted ASU 2016-02 and all related amendments utilizing the effective date transition method with a cumulative effect adjustment recorded as of the beginning of the year. The Company elected the practical expedient to combine lease and non-lease components for certain real estate leases. As permitted by ASU 2016-02, the Company did not reassess whether existing contracts contain a lease under the new definition of a lease, did not change the lease classification for existing leases, and did not reassess whether initial indirect costs for existing leases would qualify for capitalization under the new guidance. The adoption of ASU 2016-02 did not have a material impact on the Company's consolidated financial statements, but did result in additional disclosures related to leases.

In August 2017, the FASB issued ASU No. 2017-12, "Derivatives and Hedging – Targeted Improvements to Accounting for Hedging Activities," which changed the recognition and presentation requirements of hedge accounting. Effective January 1, 2019, the Company adopted ASU No. 2017-12 with no impact on the Company's consolidated financial statements.

In March 2017, the FASB issued ASU No. 2017-08, "Receivables – Nonrefundable Fees and Other Costs: Premium Amortization on Purchased Callable Debt Securities," which required that certain premiums on callable debt securities be amortized to the earliest call date. Effective January 1, 2019, the Company adopted ASU No. 2017-08 with no impact on the Company's consolidated financial statements.

Changes in Accounting Principles – Issued but Not Yet Adopted

In August 2018, the FASB issued ASU No. 2018-15, "Customer's Accounting for Implementation Costs Incurred in a Cloud Computing Arrangement that is a Service Contract," which align the requirements for capitalizing implementation costs incurred in a hosting arrangement that is a service contract with the requirements for capitalizing implementation costs incurred to develop or obtain internal-use software. ASU No. 2018-15 is effective for fiscal years beginning after December 15, 2019 and can be applied either retrospectively or prospectively to all implementation costs incurred after the date of adoption. Early adoption is permitted. The adoption of ASU No. 2018-15 is not expected to have a material impact on the Company's consolidated financial statements.

In August 2018, the FASB issued ASU No. 2018-13, "Changes to the Disclosure Requirements for Fair Value Measurements," which modifies the disclosure requirements on fair value measurements. ASU No. 2018-13 is effective for fiscal years beginning after December 15, 2019. Early adoption is permitted, with the option to early adopt any removed or modified disclosures while delaying adoption of the new disclosures until the effective date. Certain amendments are required to be applied prospectively for only the most recent annual period presented, where other amendments are to be applied retrospectively to all periods presented. Upon adoption in 2020, the Company will revise the impacted disclosures within the Company's consolidated financial statements.

In August 2018, the FASB issued ASU No. 2018-12, "Targeted Improvements to the Accounting for Long Duration Contracts," which includes changes to the existing recognition, measurement, presentation and disclosure requirements for long-duration contracts issued by an insurance entity. The amendments in this Update contain four significant changes: 1) For the calculation of the liability for future policy benefits of nonparticipating traditional and limited-payment insurance and reinsurance contracts, cash flow assumptions and discount rates will be required to be updated at least annually; 2) Market risk benefits, a new term for certain contracts or features that provide for potential benefits in addition to the account balance which exposes the insurer to other than nominal market risk, will be measured at fair value; 3) deferred acquisition costs ("DAC") will be amortized on a constant-level basis, independent of profitability; and 4) enhanced disclosures, including quantitative information in rollforwards for balance sheet accounts, as well as information about significant inputs, judgments, assumptions and methods used in measurement will be required. ASU No. 2018-12 is effective for fiscal years beginning after December 15, 2021, with required retrospective application to January 1, 2020. Early adoption is permitted. The Company has begun its implementation efforts and is currently assessing the impact of the new guidance. Given the nature and extent of the required changes, the adoption of this standard is expected to have a significant impact on the Company's consolidated financial statements and disclosures. In addition to the initial balance sheet impact upon adoption, the Company also expects a change in the pattern of future profit emergence.

In June 2016, the FASB issued ASU No. 2016-13, "Financial Instruments – Credit Losses: Measurement of Credit Losses on Financial Instruments," which provides a new current expected credit loss ("CECL") model to account for credit losses on certain financial assets and off-balance sheet exposures. The model requires an entity to estimate lifetime credit losses related to such financial assets and exposures based on relevant information about past events, current conditions, and reasonable and supportable forecasts that affect the collectability of the reported amount. The guidance also modifies the current other-than-temporary impairment guidance for available-for-sale debt securities to require the use of an allowance rather than a direct write down of the investment and replaces existing guidance for purchased credit deteriorated loans and debt securities. The guidance also requires enhanced disclosures. ASU No. 2016-13 is effective for public entities that meet the definition of an SEC filer for annual reporting periods beginning after December 15, 2019. As of December 31, 2019, the Company estimates the commercial mortgage and other loan CECL allowance to be a reduction in opening retained earnings by approximately $60 - $85 million on a pre-tax basis. The ultimate impact of adoption is dependent upon changes in the outstanding balance and composition of the investment portfolio, macroeconomic conditions, and reasonable and supportable forecasts of those macroeconomic conditions used within the credit loss models. Further validation of the models could also impact the balance sheet adjustment upon implementation. While the final methodology for the reinsurance receivable CECL allowance is still under development, the allowance is not expected to be material. The Company plans to adopt the standard on its effective date of January 1, 2020, with a cumulative effect adjustment to retained earnings.

Comprehensive Income
Comprehensive income includes all changes in stockholder's equity (except those arising from transactions with owners/stockholders) and, in the Company's case, includes net income and net unrealized gains or losses on available for sale debt securities.

Investments
Debt securities consist primarily of bonds, notes, and asset-backed securities. Acquisition discounts and premiums on debt securities are amortized into investment income through call or maturity dates using the effective interest method. Discounts and premiums on asset-backed securities are amortized over the estimated redemption period. Certain asset-backed securities are considered to be other than high quality or otherwise deemed to be high-risk, meaning the Company might not recover substantially all of its recorded investment due to unanticipated prepayment events. For these securities, changes in investment yields due to changes in estimated future cash flows are accounted for on a prospective basis. The carrying value of such securities was $220.1 million and $291.6 million as of December 31, 2019 and 2018, respectively.

Debt securities are generally classified as available for sale and are carried at fair value. For declines in fair value considered to be other-than-temporary, an impairment charge reflecting the difference between the amortized cost basis and fair value is included in net realized losses on investments. If management believes the Company does not intend to sell the security and is not more likely than not to be required to sell the security prior to recovery of its amortized cost basis, an amount representing the non-credit related portion of a loss is reclassified out of net realized losses on investments and into other comprehensive income. In determining whether an other-than-temporary impairment has occurred, and in calculating the non-credit related component of the total impairment loss, the Company considers a number of factors, which are further described in Note 3.

Equity securities include common stocks, preferred stocks, mutual funds, and limited partnerships. Carrying values for limited partnership investments are generally determined by using the proportion of the Company's investment in each fund (Net Asset Value ("NAV") equivalent) as a practical expedient for fair value. All equity securities are carried at fair value with changes in value included in net investment income.

Commercial mortgage loans are carried at the aggregate unpaid principal balance, adjusted for any applicable unamortized discount or premium, impairments or allowance for loan losses. Acquisition discounts and premiums on commercial mortgage loans are amortized into investment income through maturity dates using the effective interest method.

On a periodic basis, the Company assesses the commercial mortgage loan portfolio for the need for an allowance for loan losses. In determining its allowance for loan losses, the Company evaluates each loan to determine if it is probable that amounts due according to the contractual terms of the loan agreement will not be collected. The allowance includes loan specific reserves for loans that are determined to be non-performing as a result of this loan review process and a portfolio reserve for probable incurred but not specifically identified losses for performing loans. The loan specific portion of the loss allowance is based on the Company's assessment as to ultimate collectability of loan principal and interest, or other value expected in lieu of loan principal and interest. This review contemplates a variety of factors which may include, but are not limited to, current economic conditions, the physical condition of the property, the financial condition of the borrower, and the near and long-term prospects for change in these conditions. In determining the portfolio reserve for incurred but not specifically identified losses, Jackson considers the current credit composition of the portfolio based on the results of its loan modeling analysis, which considers property type, default statistics, historical losses and other relevant factors to determine probability of default and other default loss estimates. Model assumptions are updated each quarter and, based upon actual loan experience, are considered together with other relevant qualitative factors in making the final portfolio reserve calculations. The valuation allowance for commercial mortgage loans can increase or decrease from period to period based on these factors. Changes in the allowance for loan losses are recorded in net investment income.

Separately, the Company also reviews individual loans in the portfolio for impairment based on an assessment of the factors identified above. Impairment charges recognized are recorded initially against the established loan loss allowance and, if necessary, any additional amounts are recorded as realized losses. As deemed necessary based on cash flow expectations and other factors, Jackson may place loans on non-accrual status. In this case, all cash received is applied against the carrying value of the loan.

Policy loans are loans the Company issues to contract holders that use the cash surrender value of their life insurance policy or annuity contract as collateral. The Company elected the fair value option upon acquisition of policy loans held as collateral for reinsurance, further described below. At December 31, 2019 and 2018, \$3.6 billion and \$3.5 billion, respectively, of these loans were carried at fair value, which the Company believes is equal to the unpaid principal balances plus accrued investment income. At December 31, 2019 and 2018, the Company had \$1.1 billion and \$1.2 billion respectively, of policy loans not held as collateral for reinsurance, which were carried at the unpaid principal balances.

Other invested assets primarily include investments in Federal Home Loan Bank capital stock and real estate. Federal Home Loan Bank capital stock is carried at cost and adjusted for any impairment. Real estate is carried at the lower of depreciated cost or fair value.

The Company's involvement with variable interest entities ("VIEs") is primarily to invest in assets that gain exposure to a broadly diversified portfolio of asset classes. A VIE is an entity that does not have sufficient equity to finance the activities of the entity without additional subordinated financial support, or where investors lack certain characteristics of a controlling financial interest. The Company performs ongoing qualitative assessments of variable interests in VIEs to determine whether it has a controlling financial interest and would, therefore, be considered the primary beneficiary of the VIE. If the Company determines it is the primary beneficiary of a VIE, it consolidates the assets and liabilities of the VIE in its consolidated financial statements.

Realized gains and losses on sales of investments are recognized in income at the date of sale and are determined using the specific cost identification method.

The Company elected the fair value option for certain assets which are held as collateral for reinsurance, as further described below. Accordingly, the Company established a funds held liability, for which the Company also elected the fair value option. The value of the funds held liability is equal to the fair value of the assets held as collateral. The income and any changes in unrealized gains and losses on these assets and the corresponding funds held liability are included in net investment income and have no impact on the Company's consolidated income statements.

The changes in unrealized gains and losses on certain investments that are classified as available for sale and the non-credit related portion of other-than-temporary impairment charges are excluded from net income and included as a component of other comprehensive income and total equity, net of tax and the effect of the adjustment for deferred acquisition costs and deferred sales inducements. The changes in unrealized gains and losses on investments for which Jackson elected the fair value option are included in net investment income.

Derivative Instruments and Embedded Derivatives

The Company enters into financial derivative transactions, including, but not limited to, swaps, put-swaptions, futures and options to reduce and manage business risks. These transactions manage the risk of a change in the value, yield, price, cash flows, credit quality or degree of exposure with respect to assets, liabilities or future cash flows which the Company has acquired or incurred. The Company manages the potential credit exposure for over-the-counter derivative contracts through careful evaluation of the counterparty credit standing, collateral agreements, and master netting agreements. The Company is exposed to credit-related losses in the event of nonperformance by counterparties, however, it does not anticipate nonperformance. There were no charges due to nonperformance by derivative counterparties in 2019, 2018, or 2017.

The Company generally uses freestanding derivative instruments for hedging purposes. Additionally, certain liabilities, primarily trust instruments supported by funding agreements, fixed index annuities and guarantees offered in connection with variable annuities issued by the Company, may contain embedded derivatives. Further details regarding Jackson's derivative positions are included in Note 4. The Company generally does not account for freestanding derivatives as either fair value or cash flow hedges as might be permitted if specific hedging documentation requirements were followed. Financial derivatives, including derivatives embedded in certain host liabilities that have been separated for accounting and financial reporting purposes, are carried at fair value. The results from freestanding derivative instruments and embedded derivatives, including net payments, realized gains and losses and changes in value, are reported in net income, as further detailed in Note 4.

Cash and Cash Equivalents

Cash and cash equivalents primarily include money market instruments and bank deposits.

Fair Value Measurement

Fair value measurements are based upon observable and unobservable inputs. Observable inputs reflect market data obtained from independent sources, while unobservable inputs reflect the Company's view of market assumptions in the absence of observable market information. The Company utilizes valuation techniques that maximize the use of observable inputs and minimize the use of unobservable inputs. All financial assets and liabilities measured at fair value are required to be classified into one of the following categories:

Level 1 Observable inputs that reflect quoted prices for identical assets or liabilities in active markets that the Company has the ability to access at the measurement date. Level 1 securities include U.S. Treasury securities and exchange traded equity securities and derivative instruments.

Level 2 Observable inputs, other than quoted prices included in Level 1, for the asset or liability or prices for similar assets and liabilities. Most debt securities that are model priced using observable inputs are classified within Level 2. Also included are freestanding and embedded derivative instruments that are priced using models with observable market inputs.

Level 3 Valuations that are derived from techniques in which one or more of the significant inputs are unobservable (including assumptions about risk). Embedded derivatives that are valued using unobservable inputs are included in Level 3. Because Level 3 fair values, by their nature, contain unobservable market inputs, considerable judgment may be used to determine the Level 3 fair values. Level 3 fair values represent the Company's best estimate of an amount that could be realized in a current market exchange absent actual market exchanges.

In many situations, inputs used to measure the fair value of an asset or liability may fall into different levels of the fair value hierarchy. In these situations, the Company determines the level in which the fair value falls based upon the lowest level input that is significant to the determination of the fair value. As a result, both observable and unobservable inputs may be used in the determination of fair values that the Company has classified within Level 3.

The Company determines the fair values of certain financial assets and liabilities based on quoted market prices, where available. The Company may also determine fair value based on estimated future cash flows discounted at the appropriate current market rate. When appropriate, fair values reflect adjustments for counterparty credit quality, the Company's credit standing, liquidity and risk margins on unobservable inputs.

Where quoted market prices are not available, fair value estimates are made at a point in time, based on relevant market data, as well as the best information about the individual financial instrument. At times, illiquid market conditions may result in inactive markets for certain of the Company's financial instruments. In such instances, there may be no or limited observable market data for these assets and liabilities. Fair value estimates for financial instruments deemed to be in an illiquid market are based on judgments regarding current economic conditions, liquidity discounts, currency, credit and interest rate risks, loss experience and other factors. These fair values are estimates and involve considerable uncertainty and variability as a result of the inputs selected and may differ materially from the values that would have been used had an active market existed. As a result of market inactivity, such calculated fair value estimates may not be realizable in an immediate sale or settlement of the instrument. In addition, changes in the underlying assumptions used in the fair value measurement technique could significantly affect these fair value estimates.

Refer to Note 5 for further discussion of the methodologies used to determine fair values of the Company's financial instruments.

Deferred Acquisition Costs
Under current accounting guidance, certain costs that are directly related to the successful acquisition of new or renewal insurance business can be capitalized as deferred acquisition costs. These costs primarily pertain to commissions and certain costs associated with policy issuance and underwriting. All other acquisition costs are expensed as incurred.

Deferred acquisition costs are increased by interest thereon and amortized into income in proportion to anticipated premium revenues for traditional life policies and in proportion to estimated gross profits, including realized gains and losses and derivative movements, for annuities and interest-sensitive life products. Due to volatility of certain factors that affect gross profits, including realized capital gains and losses and derivative movements, amortization may be a benefit or a charge in any given period. In the event of negative amortization, the related deferred acquisition cost balance is capped at the initial amount capitalized, plus interest. Unamortized deferred acquisition costs are written off when a contract is internally replaced and substantially changed.

As certain available for sale debt securities are carried at fair value, an adjustment is made to deferred acquisition costs equal to the change in amortization that would have occurred if such securities had been sold at their stated fair value and the proceeds reinvested at current yields. This adjustment, along with the change in net unrealized gains (losses) on available for sale debt securities, net of applicable tax, is credited or charged directly to equity as a component of other comprehensive income. At December 31, 2019 and 2018, deferred acquisition costs decreased by $573.8 million and $26.6 million, respectively, to reflect this adjustment.

For variable annuity business, the Company employs a mean reversion methodology that is applied with the objective of adjusting the amortization of deferred acquisition costs that would otherwise be highly volatile due to fluctuations in the level of future gross profits arising from changes in equity market levels. The mean reversion methodology achieves this objective by applying a dynamic adjustment to the assumption for short-term future investment returns. Under this methodology, the projected returns for the next five years are set such that, when combined with the actual returns for the current and preceding two years, the average rate of return over the eight-year period is 7.4% for both 2019 and 2018, after investment management fees. The mean reversion methodology does, however, include a cap and a floor of 15% and 0% per annum, respectively, on the projected return for each of the next five years. At December 31, 2019 and 2018, projected returns under mean reversion were within the range bound by the 15% cap and 0% floor. At December 31, 2019 and 2018, projected returns after the next five years were set at 7.4%.

Deferred acquisition costs are reviewed periodically to ensure that the unamortized portion does not exceed the expected recoverable amounts. Any amount deemed unrecoverable is written off with a charge through deferred acquisition costs amortization. No such write-offs were required for 2019, 2018, and 2017.

Deferred Sales Inducements
Under current accounting guidance, certain sales inducement costs that are directly related to the successful acquisition of new or renewal insurance business can be capitalized as deferred sales inducement costs. Bonus interest on deferred fixed annuities and contract enhancements on fixed index annuities and variable annuities are capitalized as deferred sales inducements and included in other assets. Deferred sales inducements are increased by interest thereon and amortized into income in proportion to estimated gross profits, including realized capital gains and losses and derivative movements. Due to volatility of certain factors that affect gross profits, including realized capital gains and losses and derivative movements, amortization may be a benefit or a charge in any given period. In the event of negative amortization, the related deferred sales inducements balance is capped at the initial amount capitalized, plus interest. Unamortized deferred sales inducements are written off when a contract is internally replaced and substantially changed.

As certain available for sale debt securities are carried at fair value, an adjustment is made to deferred sales inducements equal to the change in amortization that would have occurred if such securities had been sold at their stated fair value and the proceeds reinvested at current yields. This adjustment, along with the change in net unrealized gains (losses) on available for sale debt securities, net of applicable tax, is credited or charged directly to equity as a component of other comprehensive income. At December 31, 2019 and 2018, deferred sales inducements decreased by $88.6 million and $8.7 million, respectively, to reflect this adjustment.

For variable annuity business, the Company employs the same mean reversion methodology as is employed for deferred acquisition costs as described above.

Deferred sales inducements are reviewed periodically to ensure that the unamortized portion does not exceed the expected recoverable amounts. Any amount deemed unrecoverable is written off with a charge through deferred sales inducements amortization. No such write-offs were required for 2019, 2018, and 2017.

Actuarial Assumption Changes (Unlocking)
Annually, or as circumstances warrant, the Company conducts a comprehensive review of the assumptions used for its estimates of future gross profits underlying the amortization of deferred acquisition costs and deferred sales inducements, as well as the valuation of the embedded derivatives and reserves for life insurance and annuity products with living benefit and death benefit guarantees. These assumptions include, but may not be limited to, policyholder behavior, mortality rates, expenses, investment returns and policy crediting rates. Based on this review, the cumulative balances of deferred acquisition costs, deferred sales inducements and life and annuity guaranteed benefit reserves are adjusted with a corresponding benefit or charge to net income. Additionally, in 2017, the Company implemented an enhancement to the method for incorporating own credit risk in the discounting of embedded derivative cash flows. The impact of the enhancement reduced reserves by $558.0 million, net of deferred acquisition costs.

Reinsurance and Funds Held Under Reinsurance Treaties
The Company enters into assumed and ceded reinsurance agreements with other companies in the normal course of business. Ceded reinsurance agreements are reported on a gross basis on the Company’s consolidated balance sheets as an asset for amounts recoverable from reinsurers or as a component of other assets or liabilities for amounts, such as premiums, owed to or due from reinsurers. Reinsurance assumed and ceded premiums and benefits paid or provided are accounted for on bases consistent with those used in accounting for the original policies issued and the terms of the reinsurance contracts. Premium income and benefit expenses are reported net of reinsurance assumed and ceded.

The Company has three retrocession reinsurance agreements (“retro treaties”) with Swiss Reinsurance Company Ltd. (“SRZ”). Pursuant to these retro treaties, the Company ceded to SRZ on a 100% coinsurance basis, subject to pre-existing reinsurance with other parties, certain blocks of business.

As a result of these retro treaties, the Company holds certain assets, primarily in the form of policy loans and debt securities, as collateral for the reinsurance recoverable. Investment income and realized gains or losses earned on assets held as collateral are paid by the Company to SRZ, pursuant to the terms of the treaties. Investment income and realized gains and losses are reported net of investment income and realized gains and losses on funds held under reinsurance treaties, with no net impact on the Company’s consolidated income statements.

The income credited to SRZ on the funds held for the retro treaties is based on the income earned on those assets, which results in an embedded derivative (total return swap). However, the Company elected the fair value option for the funds held liability, which is carried at fair value with changes in fair value reported in net investment income. Accordingly, the embedded derivative is not bifurcated or separately valued.

Receivables from Affiliates

Effective December 30, 2016, the Company executed a reserve financing transaction, whereby, for statutory reporting, the risk on $319.0 million of statutory basis redundant term life reserves was transferred to a third-party reinsurer. In conjunction with the transaction, Squire Re II financed the excess reserves through a surplus note (the “Squire Surplus Note”) issued to an affiliate, Brier Capital LLC (“Brier”), in return for a note receivable from Brier (the “Financing Note”). Quarterly interest payments due under the Financing Note and the Squire Surplus Note are offset against each other and only the net amounts are due. The outstanding principal on the Financing Note and the Squire Surplus Note, each initially $344.0 million, are expected to increase or decrease in relation to changes in the excess reserves financed. The Financing Note, reported in Receivables from Affiliates, matures December 30, 2031 and bears interest at 4.00%. The outstanding balance of both the Financing Note and the Squire Surplus Note was $247.8 million and $283.8 million at December 31, 2019 and 2018, respectively.

Jackson provides a revolving credit facility to Jackson Holdings, LLC, an upstream holding company. The outstanding balance at both December 31, 2019 and 2018 was nil.

Value of Business Acquired

The Company has an intangible asset representing the value of business acquired (“VOBA”), which is included in other assets. In connection with the acquisition of insurance policies and investment contracts in the acquisition of a business, a portion of the purchase price is assigned to the right to receive future gross profits from the acquired insurance policies and investment contracts. This intangible asset, or VOBA, represents the actuarially estimated present value of future cash flows from the acquired policies. The Company established a VOBA intangible asset for previously acquired traditional life insurance products and deferred annuity contracts. This intangible asset is amortized over the life of the business, which approximates 20 years. The unamortized VOBA balance is subject to recoverability testing at the end of each reporting period to ensure that the balance does not exceed the present value of anticipated gross profits.

Income Taxes

The Company files income tax returns with the U.S. federal government and various state and local jurisdictions, as well as certain foreign jurisdictions.

Jackson files a consolidated federal income tax return with Brooke Life, Jackson National Life Insurance Company of New York and, Squire Re II. Jackson National Life (Bermuda) LTD and VFL International Life Company SPC, LTD are taxed as controlled foreign corporations of Jackson. With the exception of several insignificant wholly owned subsidiaries that are not included in the Jackson consolidated tax return, all other subsidiaries are limited liability companies with all of their interests owned by Jackson. Accordingly, they are not considered separate entities for income tax purposes and, therefore, are taxed as part of the operations of Jackson. Income tax expense is the amount calculated on a separate company basis.

Deferred federal income taxes arise from the recognition of temporary differences between the basis of assets and liabilities determined for financial reporting purposes and the basis determined for income tax purposes. Such temporary differences are principally related to the effects of recording certain invested assets at market value, the deferral of acquisition costs and sales inducements and the provisions for future policy benefits and expenses. Deferred tax assets and liabilities are measured using the tax rates expected to be in effect when such benefits are realized. Jackson is required to test the value of deferred tax assets for realizability. Deferred tax assets are reduced by a valuation allowance if, based on the weight of available positive and negative evidence, it is more likely than not that some portion, or all, of the deferred tax assets will not be realized. In determining the need for a valuation allowance, the Company considers the carryback eligibility of losses, reversal of existing temporary differences, estimated future taxable income and tax planning strategies.

The determination of the valuation allowance for Jackson's deferred tax assets requires management to make certain judgments and assumptions regarding future operations that are based on historical experience and expectations of future performance. In order to recognize a tax benefit in the consolidated financial statements, there must be a greater than fifty percent chance of success of the Company's position being sustained by the relevant taxing authority with regard to that tax position. Management's judgments are potentially subject to change given the inherent uncertainty in predicting future performance, which is impacted by such factors as policyholder behavior, competitor pricing and other specific industry and market conditions.

The Company recognizes accrued interest and penalties, if any, related to unrecognized tax benefits as a component of tax expense.

Reserves for Future Policy Benefits and Claims Payable and Other Contract Holder Funds
For traditional life insurance contracts, which include term and whole life, reserves for future policy benefits are determined using the net level premium method and assumptions as of the issue date or acquisition date as to mortality, interest, persistency and expenses, plus provisions for adverse deviations. These assumptions are not unlocked unless the reserve is determined to be deficient. Interest rate assumptions range from 2.5% to 6.0%. Lapse, mortality, and expense assumptions for recoverability are based primarily on Company experience. The Company's liability for future policy benefits also includes net liabilities for guaranteed benefits related to certain nontraditional long-duration life and annuity contracts, which are further discussed in Note 9.

Group payout annuities consist of a closed block of defined benefit annuity plans. The liability for future benefits for these limited payment contracts is calculated using assumptions as of the acquisition date as to mortality and expense plus provisions for adverse deviation.

In conjunction with a prior acquisition, the Company recorded a fair value adjustment related to certain annuity and interest sensitive liability blocks of business to reflect the cost of the interest guarantees within the inforce liabilities, based on the difference between the guaranteed interest rate and an assumed new money guaranteed interest rate. This adjustment was recorded in reserves for future policy benefits and claims payable. This component of the acquired reserves is reassessed at the end of each period, taking into account changes in the inforce block. Any resulting change in the reserve is recorded as a change in policy reserve through the consolidated income statements.

For the Company's interest-sensitive life contracts, liabilities approximate the policyholder's account value, plus the remaining balance of the fair value adjustment related to previously acquired business. For fixed deferred annuities, the liability is the policyholder's account value, plus the unamortized balance of the above mentioned fair value adjustment. For the fixed option on variable annuities, guaranteed investment contracts and other investment contracts, the liability is the policyholder's account value. The liability for fixed index annuities is based on three components, 1) the imputed value of the underlying guaranteed host contract, 2) the fair value of the embedded option component of the contract and 3) the liability for guaranteed benefits related to the optional lifetime income rider.

The Company has formed both a special purpose vehicle and a statutory business trust, solely for the purpose of issuing Medium Term Note instruments to institutional investors, the proceeds of which are deposited with the Company and secured by the issuance of funding agreements.

Those Medium Term Note instruments issued in a foreign currency have been economically hedged for changes in exchange rates using cross-currency swaps. The fair value of derivatives embedded in funding agreements, including unrealized foreign currency gains and losses, are included in the carrying value of the trust instruments supported by funding agreements.

Trust instrument liabilities are adjusted to reflect the effects of foreign currency gains and losses using exchange rates as of the reporting date. Foreign currency gains and losses are included in other net investment losses.

Jackson and Squire Re are members of the Federal Home Loan Bank of Indianapolis ("FHLBI") primarily for the purpose of participating in the bank's mortgage-collateralized loan advance program with short-term and long-term funding facilities. Members are required to purchase and hold a minimum amount of FHLBI capital stock, plus additional stock based on outstanding advances. Advances are in the form of short-term or long-term notes or funding agreements issued to FHLBI.

The Company's institutional products business is comprised of the guaranteed investment contracts, funding agreements and FHLBI funding agreement advances described above.

Contingent Liabilities
The Company is a party to legal actions and, at times, regulatory investigations. Given the inherent unpredictability of these matters, it is difficult to estimate their impact on the Company's financial position. A reserve is established for contingent liabilities if it is probable that a loss has been incurred and the amount is reasonably estimable. It is possible that an adverse outcome in certain of the Company's contingent liabilities, or the use of different assumptions in the determination of amounts recorded, could have a material effect upon the Company's financial position. However, it is the opinion of management that the ultimate disposition of contingent liabilities is unlikely to have a material adverse effect on the Company's financial position.

Separate Account Assets and Liabilities
The Company maintains separate account assets, which are reported at fair value. The related liabilities are reported at an amount equivalent to the separate account assets. At December 31, 2019 and 2018, the assets and liabilities associated with variable life and annuity contracts were $195.1 billion and $163.3 billion, respectively. Investment risks associated with market value changes are borne by the contract holders, except to the extent of minimum guarantees made by the Company. Refer to Note 9 for additional information regarding the Company's contractual guarantees. Separate account net investment income, net investment realized and unrealized gains and losses, and the related liability changes are offset within the same line item in the consolidated income statements. Amounts assessed against the contract holders for mortality, variable annuity benefit guarantees, administrative, and other services are reported in revenue as fee income.

Included in the above mentioned assets and liabilities is a Company issued group variable annuity contract designed for use in connection with and issued to the Company's Defined Contribution Retirement Plan. These deposits are allocated to the Jackson National Separate Account – II, which had balances of $316.3 million and $251.6 million at December 31, 2019 and 2018, respectively. The Company receives administrative fees for managing the funds. These fees are recorded as earned and included in fee income in the consolidated income statements.

Debt
Liabilities for the Company's debt are primarily carried at an amount equal to the unpaid principal balance. Original issuance discount or premium and any debt issue costs, if applicable, are recognized as a component of interest expense over the period the debt is expected to be outstanding. Refer to Note 10 for further information regarding the Company's debt.

Share-Based Compensation
As more fully described in Note 14, the Company has certain share award plans that are either equity settled or liability settled. The Company recognizes compensation expense based on a grant-date award fair value, ratably over the requisite service period of each individual grant, which generally equals the vesting period. Additional compensation expense is recognized based on the change in fair value of the award at the end of each reporting period.

Revenue and Expense Recognition
Premiums for traditional life insurance are reported as revenues when due. Benefits, claims and expenses are associated with earned revenues in order to recognize profit over the lives of the contracts. This association is accomplished through provisions for future policy benefits and the deferral and amortization of certain acquisition costs.

Deposits on interest-sensitive life products and investment contracts, principally deferred annuities and guaranteed investment contracts, are treated as policyholder deposits and excluded from revenue. Revenues consist primarily of investment income and charges assessed against the account value for mortality charges, surrenders, variable annuity benefit guarantees and administrative expenses. Fee income also includes revenues related to asset management fees and certain service fees. Surrender benefits are treated as repayments of the policy holder account. Annuity benefit payments are treated as reductions to the policyholder account. Death benefits in excess of the policyholder account are recognized as an expense when incurred. Expenses consist primarily of the interest credited to policyholder deposits. Underwriting and other direct acquisition expenses are associated with gross profit in order to recognize profit over the life of the business. This is accomplished through deferral and amortization of acquisition costs and sales inducements. Expenses not related to policy acquisition are recognized when incurred.

Investment income is not accrued on securities in default and otherwise where the collection is uncertain. In these cases, receipts of interest on such securities are used to reduce the cost basis of the securities.

Subsequent Events

The Company has evaluated events through March 5, 2020, which is the date the consolidated financial statements were available to be issued.

3. Investments

Investments are comprised primarily of fixed-income securities and loans, primarily publicly-traded corporate and government bonds, asset-backed securities and commercial mortgage loans. Asset-backed securities include mortgage-backed and other structured securities. The Company generates the majority of its general account deposits from interest-sensitive individual annuity contracts, life insurance products and guaranteed investment contracts on which it has committed to pay a declared rate of interest. The Company's strategy of investing in fixed-income securities and loans aims to ensure matching of the asset yield with the amounts credited to the interest-sensitive liabilities and to earn a stable return on its investments.

Debt Securities

The following table sets forth the composition of the fair value of debt securities at December 31, 2019, classified by rating categories as assigned by nationally recognized statistical rating organizations ("NRSRO"), the National Association of Insurance Commissioners ("NAIC"), or if not rated by such organizations, the Company's affiliated investment advisor. At December 31, 2019, the carrying value of investments rated by the Company's affiliated investment advisor totaled $310.0 million. For purposes of the table, if not otherwise rated higher by a NRSRO, NAIC Class 1 investments are included in the A rating; Class 2 in BBB; Class 3 in BB and Classes 4 through 6 in B and below.

Investment Rating	Percent of Total Debt Securities Carrying Value December 31, 2019
AAA	20.2%
AA	7.2%
A	37.5%
BBB	33.3%
Investment grade	98.2%
BB	1.2%
B and below	0.6%
Below investment grade	1.8%
Total debt securities	100.0%

At December 31, 2019, based on ratings by NRSROs, of the total carrying value of debt securities in an unrealized loss position, 82% were investment grade, 3% were below investment grade and 15% were not rated. Unrealized losses on debt securities that were below investment grade or not rated were approximately 43% of the aggregate gross unrealized losses on available for sale debt securities.

Corporate securities in an unrealized loss position were diversified across industries. As of December 31, 2019, the industries accounting for the largest percentage of unrealized losses included consumer goods (23% of corporate gross unrealized losses) and energy (20%). The largest unrealized loss related to a single corporate obligor was $1.3 million at December 31, 2019.

At December 31, 2019 and 2018, the amortized cost, gross unrealized gains and losses, fair value and non-credit other-than-temporary impairment ("OTTI") of available for sale debt securities, including $151.1 million and $170.4 million in securities carried at fair value under the fair value option, were as follows (in thousands):

December 31, 2019	Amortized Cost (1)	Gross Unrealized Gains	Gross Unrealized Losses	Fair Value	Non-credit OTTI (2)
Debt Securities					
U.S. government securities	$ 5,709,013	$ 427,441	$ 705	$ 6,135,749	$ -
Other government securities	1,601,199	140,134	50	1,741,283	-
Public utilities	6,150,362	602,251	2,348	6,750,265	-
Corporate securities	34,225,801	2,141,339	16,759	36,350,381	-
Residential mortgage-backed	989,312	60,476	1,543	1,048,245	(24,042)
Commercial mortgage-backed	2,948,412	101,447	3,461	3,046,398	205
Other asset-backed securities	1,881,053	30,040	9,392	1,901,701	(10,824)

(1) Amortized cost, apart from the carrying value for securities carried at fair value under the fair value option.

(2) Represents the amount of non-credit OTTI gains (losses) recognized in other comprehensive income on securities for which credit impairments have been recorded.

The amortized cost, gross unrealized gains and losses, and fair value of debt securities at December 31, 2019, by contractual maturity, are shown below (in thousands). Actual maturities may differ from contractual maturities where securities can be called or prepaid with or without early redemption penalties.

	Amortized [(1)] Cost	Gross Unrealized Gains	Gross Unrealized Losses	Fair Value
Due in 1 year or less	$ 2,147,068	$ 20,914	$ 310	$ 2,167,672
Due after 1 year through 5 years	12,189,795	499,737	1,084	12,688,448
Due after 5 years through 10 years	18,378,278	1,139,060	11,199	19,506,139
Due after 10 years through 20 years	6,980,513	772,931	3,817	7,749,627
Due after 20 years	7,990,721	878,523	3,452	8,865,792
Residential mortgage-backed	989,312	60,476	1,543	1,048,245
Commercial mortgage-backed	2,948,412	101,447	3,461	3,046,398
Other asset-backed securities	1,881,053	30,040	9,392	1,901,701
Total	$ 53,505,152	$ 3,503,128	$ 34,258	$ 56,974,022

(1) Amortized cost, apart from the carrying value for securities carried at fair value under the fair value option.

Securities with a carrying value of $117.5 million and $107.1 million at December 31, 2019 and 2018, respectively, were on deposit with regulatory authorities, as required by law in various states in which business is conducted.

At December 31, 2019 and 2018, debt securities include $151.1 million and $170.4 million, respectively, held in trust pursuant to the retro treaties with SRZ.

Residential mortgage-backed securities ("RMBS") include certain RMBS, which are collateralized by residential mortgage loans and are neither explicitly nor implicitly guaranteed by U.S. government agencies ("non-agency RMBS"). The Company's non-agency RMBS include investments in securities backed by prime, Alt-A, and subprime loans as follows (in thousands):

December 31, 2019	Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Fair Value
Prime	$ 320,795	$ 13,079	$ 101	$ 333,773
Alt-A	89,357	24,975	20	114,312
Subprime	80,086	13,008	53	93,041
Total non-agency RMBS	$ 490,238	$ 51,062	$ 174	$ 541,126

December 31, 2018	Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Fair Value
Prime	$ 211,848	$ 10,386	$ 988	$ 221,246
Alt-A	110,207	22,710	297	132,620
Subprime	110,602	12,170	365	122,407
Total non-agency RMBS	$ 432,657	$ 45,266	$ 1,650	$ 476,273

The Company defines its exposure to non-agency residential mortgage loans as follows. Prime loan-backed securities are collateralized by mortgage loans made to the highest rated borrowers. Alt-A loan-backed securities are collateralized by mortgage loans made to borrowers who lack credit documentation or necessary requirements to obtain prime borrower rates. Subprime loan-backed securities are collateralized by mortgage loans made to borrowers that have a FICO score of 680 or lower.

The following table summarizes the number of securities, fair value and the related amount of gross unrealized losses aggregated by investment category and length of time that individual debt securities have been in a continuous loss position (dollars in thousands):

	December 31, 2019			December 31, 2018		
	Less than 12 months			Less than 12 months

Other-Than-Temporary Impairments on Available For Sale Debt Securities

The Company periodically reviews its available for sale debt securities on a case-by-case basis to determine if any decline in fair value to below cost or amortized cost is other-than-temporary. Factors considered in determining whether a decline is other-than-temporary include the length of time a security has been in an unrealized loss position, the severity of the unrealized loss and the reasons for the decline in value and expectations for the amount and timing of a recovery in fair value.

Securities the Company determines are underperforming or potential problem securities are subject to regular review. To facilitate the review, securities with significant declines in value, or where other objective criteria evidencing credit deterioration have been met, are included on a watch list. Among the criteria for securities to be included on a watch list are: credit deterioration that has led to a significant decline in fair value of the security; a significant covenant related to the security has been breached; or an issuer has filed or indicated a possibility of filing for bankruptcy, has missed or announced it intends to miss a scheduled interest or principal payment, or has experienced a specific material adverse change that may impair its creditworthiness.

In performing these reviews, the Company considers the relevant facts and circumstances relating to each investment and exercises considerable judgment in determining whether a security is other-than-temporarily impaired. Assessment factors include judgments about an obligor's current and projected financial position, an issuer's current and projected ability to service and repay its debt obligations, the existence of, and realizable value of, any collateral backing the obligations and the macro-economic and micro-economic outlooks for specific industries and issuers. This assessment may also involve assumptions regarding underlying collateral such as prepayment rates, default and recovery rates, and third-party servicing capabilities.

Among the specific factors considered are whether the decline in fair value results from a change in the credit quality of the security itself, or from a downward movement in the market as a whole, and the likelihood of recovering the carrying value based on the near-term prospects of the issuer. Unrealized losses that are considered to be primarily the result of market conditions (e.g., minor increases in interest rates, temporary market illiquidity or volatility, or industry-related events) and where the Company also believes there exists a reasonable expectation for recovery in the near term are usually determined to be temporary. To the extent that factors contributing to impairment losses recognized affect other investments, such investments are also reviewed for other-than-temporary impairment and losses are recorded when appropriate.

In addition to the review procedures described above, investments in asset-backed securities where market prices are depressed are subject to a review of their future estimated cash flows, including expected and stress case scenarios, to identify potential shortfalls in contractual payments. These estimated cash flows are developed using available performance indicators from the underlying assets including current and projected default or delinquency rates, levels of credit enhancement, current subordination levels, vintage, expected loss severity and other relevant characteristics. These estimates reflect a combination of data derived by third parties and internally developed assumptions. Where possible, this data is benchmarked against third-party sources.

Even in the case of severely depressed market values on asset-backed securities, the Company places significant reliance on the results of its cash flow testing and its lack of an intent to sell these securities until their fair values recover when reaching other-than-temporary impairment conclusions with regard to these securities. Other-than-temporary impairment charges are recorded on asset-backed securities when the Company forecasts a contractual payment shortfall.

The Company recognizes other-than-temporary impairments on debt securities in an unrealized loss position when any of the following circumstances exists:

- The Company does not expect full recovery of the amortized cost based on the discounted cash flows estimated to be collected;
- The Company intends to sell a security; or,
- It is more likely than not that the Company will be required to sell a security prior to recovery.

For mortgage-backed securities, credit impairment is assessed using a cash flow model that estimates the cash flows on the underlying mortgages, using the security-specific collateral characteristics and transaction structure. The model estimates cash flows from the underlying mortgage loans and distributes those cash flows to various tranches of securities, considering the transaction structure and any subordination and credit enhancements existing in that structure. The cash flow model incorporates actual cash flows on the mortgage-backed securities through the current period and then projects the remaining cash flows using a number of assumptions, including prepayment speeds, default rates and loss severity.

Specifically for prime and Alt-A RMBS, the assumed default percentage is dependent on the severity of delinquency status, with foreclosures and real estate owned receiving higher rates, but also includes the currently performing loans. As of December 31, 2019 and 2018, assumed default rates for delinquent loans ranged from 15% to 100%. At December 31, 2019 and 2018, assumed loss severities were applied to generate and analyze cash flows of each security and ranged from 30% to 70% and 25% to 70%, respectively.

These estimates reflect a combination of data derived by third parties and internally developed assumptions. Where possible, this data is benchmarked against other third-party sources. In addition, these estimates are extrapolated along a default timing curve to estimate the total lifetime pool default rate.

Other-than-temporary impairments are calculated as the difference between amortized cost and fair value. For other-than-temporarily impaired securities where Jackson does not intend to sell the security and it is not more likely than not that Jackson will be required to sell the security prior to recovery, total other-than-temporary impairments are reduced by the non-credit portion of the other-than-temporary impairments, which are recognized in other comprehensive income. The resultant net other-than-temporary impairments recorded in net income reflect only the credit loss on the other-than-temporarily impaired securities. The amortized cost of the other-than-temporarily impaired securities is reduced by the amount of this credit loss.

For securities that were deemed to be other-than-temporarily impaired and for which a non-credit loss was recorded in other comprehensive income, the amount recorded as an unrealized gain (loss) represents the difference between the fair value and the new amortized cost basis of the securities. The unrealized gain (loss) on other-than-temporarily impaired securities is recorded in other comprehensive income.

The following table summarizes net realized losses on investments (in thousands):

	Years Ended December 31, 2019	2018	2017
Available-for-sale debt securities			
Realized gains on sale	$ 302,047	$ 52,155	$ 152,283
Realized losses on sale	(107,036)	(59,731)	(201,604)
Impairments:			
Total other-than-temporary impairments	(1,619)	(11,358)	(3,070)
Portion of other-than-temporary impairments included in other comprehensive income	(724)	(512)	18
Net other-than-temporary impairments	(2,343)	(11,870)	(3,052)
Other	204	818	1,710
Net realized gains (losses) on non-derivative investments	192,872	(18,628)	(50,663)
Net losses on derivative instruments	(6,652,277)	(606,371)	(3,376,666)
Total net realized losses on investments	$ (6,459,405)	$ (624,999)	$ (3,427,329)

The net losses on derivative instruments included in the above table are further detailed in Note 4.

The aggregate fair value of securities sold at a loss for the years ended December 31, 2019, 2018, and 2017 was $2,305.4 million, $3,903.1 million and $4,276.1 million, respectively, which was approximately 96%, 99%, and 96% of book value, respectively.

The following summarizes the current year activity for credit losses recognized in net income on securities where an other-than-temporary impairment was identified and the non-credit portion of the other-than-temporary impairment was included in other comprehensive income (in thousands):

	Years Ended December 31, 2019	Years Ended December 31, 2018
Cumulative credit loss beginning balance	$ 200,929	$ 227,263
Additions:		
New credit losses	1,087	6,082
Incremental credit losses	1,255	782
Reductions:		
Securities sold, paid down or disposed of	(20,802)	(27,148)
Securities where there is intent to sell	(1,087)	(6,050)
Cumulative credit loss ending balance	$ 181,382	$ 200,929

There are inherent uncertainties in assessing the fair values assigned to the Company's investments and in determining whether a decline in fair value is other-than-temporary. The Company's reviews of net present value and fair value involve several criteria including economic conditions, credit loss experience, other issuer-specific developments and estimated future cash flows. These assessments are based on the best available information at the time. Factors such as market liquidity, the widening of bid/ask spreads and a change in the cash flow assumptions can contribute to future price volatility. If actual experience differs negatively from the assumptions and other considerations used in the consolidated financial statements, unrealized losses currently reported in accumulated other comprehensive income may be recognized in the consolidated income statements in future periods.

The Company currently has no intent to sell debt securities with unrealized losses considered to be temporary until they mature or recover in value and believes that it has the ability to do so. However, if the specific facts and circumstances surrounding an individual security, or the outlook for its industry sector change, the Company may sell the security prior to its maturity or recovery and realize a loss.

Equity Securities
At December 31, 2019 and 2018, investments in limited partnerships had carrying values of $1,384.1 million and $1,276.3 million, respectively.

In 2017, the Company funded PPM Loan Holding Management Company, LLC, an affiliated investment entity facilitating the issuance of collateralized loan obligations. At December 31, 2019 and 2018, the Company's investment in PPM Loan Holding Management Company, LLC had a carrying value of $83.6 million and $96.6 million, respectively, and was included in equity securities.

Limited Partnerships and Limited Liability Companies
The Company invests in certain limited partnerships ("LPs") and limited liability companies ("LLCs") that it has concluded are VIEs. Based on the analysis of these entities, the Company is not the primary beneficiary of the VIEs as it does not have the power to direct the activities of the VIE that most significantly impact the VIE's economic performance. In addition, the Company does not have the obligation to absorb losses, or the right to receive benefits that could potentially be significant to the entities.

The carrying amounts of the Company's investments in the LPs and LLCs are recognized in equity securities on the consolidated balance sheets. Unfunded commitments for these investments are detailed in Note 13. The Company's exposure to loss is limited to the capital invested and unfunded commitments related to the LPs and LLCs.

Mutual Funds
The Company invests in certain mutual funds that it has concluded are VIEs. Based on the analysis of these entities, the Company is not the primary beneficiary of the VIEs.

Mutual funds for which the Company does not have the power to direct the activities of the VIE that most significantly impact the VIE's economic performance or for which the Company does not have the obligation to absorb losses or the right to receive benefits that could potentially be significant to the entities are recognized in equity securities on the consolidated balance sheets and were $135.8 million and $107.6 million at December 31, 2019 and 2018, respectively.

Structured Securities

The Company makes investments in structured debt securities issued by VIEs for which it is not the manager. These structured securities include RMBS, CMBS, and ABS. The Company has not provided financial or other support with respect to these VIEs other than the original investment. The Company has determined that it is not the primary beneficiary of these VIEs due to the relative size of the investment in comparison to the principal amount of the structured debt securities issued by the VIEs and the level of credit subordination that reduces the Company's obligation to absorb losses or right to receive benefits that could potentially be significant to the entities. The Company's maximum exposure to loss on these structured debt securities is limited to the amortized cost for these investments. The Company recognizes the variable interest in these VIEs at fair value on the consolidated balance sheets.

Commercial Mortgage Loans

Commercial mortgage loans of $9.9 billion and $9.4 billion at December 31, 2019 and 2018, respectively, are reported net of an allowance for loan losses of $8.9 million and $5.4 million at each date, respectively. At December 31, 2019, commercial mortgage loans were collateralized by properties located in 40 states. Jackson's commercial mortgage loan portfolio does not include single-family residential mortgage loans, and is therefore not exposed to the risk of defaults associated with residential subprime mortgage loans. Jackson periodically reviews these loans for impairment. During 2019 and 2018, Jackson recognized impairment charges against the allowance for loan losses of nil and $1.7 million, respectively.

The following table provides a summary of the allowance for losses in the Company's commercial mortgage loan portfolio at December 31, (in thousands):

Allowance for loan losses:	**2019**	**2018**
Balance at beginning of year	$ 5,441	$ 6,844
Charge-offs	-	(1,694)
Recoveries	-	-
Net charge-offs	-	(1,694)
Addition to allowance	3,437	291
Balance at end of year	$ 8,878	$ 5,441

The following table provides a summary of the allowance for losses in Jackson's commercial mortgage loan portfolio (in thousands):

	December 31, 2019		December 31, 2018	
	Allowance for Loan Losses	Recorded Investment	Allowance for Loan Losses	Recorded Investment
Collectively evaluated for impairment	8,878	9,903,569	5,441	9,405,897
Total	$ 8,878	$ 9,903,569	$ 5,441	$ 9,405,897

As of December 31, 2019 and 2018, the Company's commercial mortgage loan portfolio is current and accruing interest. Delinquency status is determined from the date of the first missed contractual payment.

Under Jackson's policy for monitoring commercial mortgage loans, all impaired commercial mortgage loans are closely evaluated subsequent to impairment. The table below summarizes the recorded investment, unpaid principal balance, related loan allowance, average recorded investment and investment income recognized on impaired loans (in thousands):

	Recorded Investment	Unpaid Principal Balance	Related Loan Allowance	Average Recorded Investment	Investment Income Recognized
December 31, 2019:

Office	1,256,136	-	-	-	1,256,136
Retail	1,776,944	-	-	-	1,776,944
Warehouse	2,276,108	-	-	-	2,276,108
Total	$ 9,903,569	$ -	$ -	$ -	$ 9,903,569

	December 31, 2018				
	In Good Standing	Restructured	Greater than 90 Days Delinquent	In the Process of Foreclosure	Total Carrying Value
Apartment	$ 3,427,767	$ -	$ -	$ -	$ 3,427,767
Hotel	840,919	-	-	-	840,919
Office	1,060,419	-	-	-	1,060,419
Retail	1,787,481	-	-	-	1,787,481
Warehouse	2,289,311	-	-	-	2,289,311
Total	$ 9,405,897	$ -	$ -	$ -	$ 9,405,897

(1) Includes mezzanine loans of $3.8 million and $66.0 million in the categories of Apartment and Office, respectively.

As of December 31, 2019 and 2018, there were no commercial mortgage loans involved in troubled debt restructuring.

Other Invested Assets

Other invested assets primarily include investments in Federal Home Loan Bank capital stock and real estate. At both December 31, 2019 and 2018, Federal Home Loan Bank capital stock had carrying value of $125.4 million. At December 31, 2019 and 2018, real estate totaling $256.8 million and $263.8 million, respectively, included foreclosed properties with a book value of $0.7 million in both 2019 and 2018.

Securities Lending

The Company has entered into securities lending agreements with agent banks whereby blocks of securities are loaned to third parties, primarily major brokerage firms. As of December 31, 2019 and 2018, the estimated fair value of loaned securities was $46.4 million and $41.9 million, respectively. The agreements require a minimum of 102 percent of the fair value of the loaned securities to be held as collateral, calculated on a daily basis. To further minimize the credit risks related to these programs, the financial condition of counterparties is monitored on a regular basis. At December 31, 2019 and 2018, cash collateral received in the amount of $48.3 million and $43.5 million, respectively, was invested by the agent banks and included in cash and cash equivalents of the Company. A securities lending payable for the overnight and continuous loans is included in liabilities in the amount of cash collateral received.

Securities lending transactions are used to generate income. Income and expenses associated with these transactions are reported as net investment income.

Repurchase Agreements

The Company routinely enters into repurchase agreements whereby the Company agrees to sell and repurchase securities. These agreements are accounted for as financing transactions, with the assets and associated liabilities included in the consolidated balance sheets. During 2019 and 2018, short-term borrowings under such agreements averaged $77.0 million and $369.0 million, respectively, with weighted average interest rates of 2.29% and 1.85% during 2019 and 2018, respectively. At both December 31, 2019 and 2018, the outstanding repurchase agreement balance was nil, collateralized with US Treasury notes and maturing within 30 days, and was included within other liabilities in the consolidated balance sheets. In the event of a decline in the fair value of the pledged collateral under these agreements, the Company may be required to transfer cash or additional securities as pledged collateral. Interest expense totaled $1.8 million, $6.8 million, and $4.3 million in 2019, 2018, and 2017, respectively. The highest level of short-term borrowings at any month end was $410.6 million in 2019 and $1,009.9 million in 2018.

Investment Income

The sources of net investment income were as follows (in thousands):

	Years Ended December 31,		
	2019	**2018**	**2017**
Debt securities	$ 2,139,728	$ 1,933,243	$ 1,963,569
Equity securities	206,784	180,962	158,809
Commercial mortgage loans	392,318	340,636	305,338
Derivative instruments	72,667	126,239	246,221
Policy loans	410,584	393,166	400,788
Other investment (loss) income	(5,807)	52,515	(6,052)
Total investment income	3,216,274	3,026,761	3,068,673
Less: income on funds held under reinsurance treaties	(329,755)	(310,554)	(322,764)
Less: investment expenses	(125,219)	(114,900)	(91,367)
Net investment income	$ 2,761,300	$ 2,601,307	$ 2,654,542

Unrealized gains included in investment income that were recognized on equity securities held were $189.3 million, $169.9 million, and $146.2 million, respectively, at December 31, 2019, 2018, and 2017. Investment income (loss) of $4.4 million, $(0.6) million, and $0.6 million was recognized on securities carried at fair value recorded through income at December 31, 2019, 2018, and 2017, respectively.

During 2019, investment income was reduced by $329.8 million for expense incurred on the liability for funds held under reinsurance treaties, including $321.4 million on policy loans, $3.5 million of debt security income, $4.4 million gain on debt securities with fair value recorded through the consolidated income statement, and $0.5 million of income from other invested assets. During 2018, investment income was reduced by $310.6 million for expense incurred on the liability for funds held under reinsurance treaties, including $307.2 million on policy loans, $3.2 million of debt security income, $0.6 million loss on debt securities with fair value recorded through the consolidated income statement, and $0.8 million of income from other invested assets. During 2017, investment income was reduced by $322.8 million for expense incurred on the liability for funds held under reinsurance treaties, including $320.1 million on policy loans, $2.4 million of debt security income, $0.4 million loss on debt securities with fair value recorded through the consolidated income statement, and $0.7 million of income from other invested assets.

4. Derivative Instruments

Jackson's business model includes the acceptance, monitoring and mitigation of risk. Specifically, Jackson considers, among other factors, exposures to interest rate and equity market movements, foreign exchange rates and other asset or liability prices. The Company uses derivative instruments to mitigate or reduce these risks in accordance with established policies and goals. Jackson's derivative holdings, while effective in managing defined risks, are not structured to meet accounting requirements to be designated as hedging instruments. As a result, freestanding derivatives are carried at fair value with changes recorded in other net investment losses.

Cross-currency total return swaps, which embody spot and forward currency swaps and, in some cases, interest rate and equity index swaps, are entered into for the purpose of hedging the Company issued foreign currency denominated trust instruments supported by funding agreements. Cross-currency total return swaps serve to hedge foreign currency exchange risk embedded in the funding agreements and are carried at fair value. The fair value of derivatives embedded in funding agreements, including unrealized foreign currency translation gains and losses, are included in the carrying value of the trust instruments supported by funding agreements. Amounts paid or received are netted with amounts paid or received on the hedged foreign currency denominated trust agreements supported by funding agreements. Foreign currency translation gains and losses associated with funding agreement hedging activities are included in other net investment losses.

Cross-currency swaps are over-the-counter agreements to exchange interest and principal payments denominated in different currencies. These contracts are entered into for the purpose of hedging the foreign currency exposure on certain debt securities held in the investment portfolio. Cross-currency swaps are carried at fair value.

Credit default swaps, with maturities up to five years, are agreements where the Company has purchased default protection on certain underlying corporate bonds held in its portfolio. These contracts allow the Company to sell the protected bonds at par value to the counterparty if a defined "default event" occurs, in exchange for periodic payments made by the Company for the life of the agreement. Credit default swaps are carried at fair value. The Company does not currently sell default protection using credit default swaps or other similar derivative instruments.

Put-swaption contracts provide the purchaser with the right, but not the obligation, to require the writer to pay the present value of a long-term interest rate swap at future exercise dates. The Company purchases and writes put-swaptions for hedging purposes with original maturities of up to 10 years. Put-swaptions hedge against movements in interest rates. Written put-swaptions may be entered into in conjunction with associated put-swaptions purchased from the same counterparties, referred to as linked put-swaptions. Linked put-swaptions have identical notional amounts and strike prices, but have different underlying swap terms. Linked put-swaptions are presented at the fair value of the net position for each pair of contracts. Non-linked put-swaptions are carried at fair value.

Equity index futures contracts and equity index options (including various call and put options, interest rate-contingent options, currency-contingent options, and put spreads), which are used to hedge the Company's equity risk, including obligations associated with its fixed index annuities and guarantees in variable annuity products, are carried at fair value. These insurance products contain embedded options whose fair values are reported in other contract holder funds and reserves for future policy benefits and claims payable.

Total return swaps, for which the Company receives returns based on reference pools of assets in exchange for short-term floating rate payments based on notional amounts, are held for both hedging and investment purposes, and are carried at fair value.

Interest rate swap agreements used for hedging purposes generally involve the exchange of fixed and floating payments based on a notional contract amount over the period for which the agreement remains outstanding without an exchange of the underlying notional amount. Interest rate swaps are carried at fair value.

Treasury futures contracts are used to hedge movements in interest rates and are carried at fair value.

A summary of the aggregate contractual or notional amounts and fair values of the Company's freestanding derivative instruments is as follows (in thousands):

	December 31, 2019				
	Assets		Liabilities		
	Contractual/ Notional Amount (1)	Fair Value	Contractual/ Notional Amount (1)	Fair Value	Net Fair Value
Cross-currency swaps	$ 154,103	$ 4,765	$ 125,571	$ (1,402)	$ 3,363
Cross-currency total return swaps	541,688	7,587	388,979	(20,627)	(13,040)
Equity index call options	31,000,000	561,416	-	-	561,416
Equity index futures	-	-	19,065,289	-	-
Equity index put options	44,500,000	323,321	-	-	323,321
Interest rate swaps	8,750,000	501,690	1,000,000	(2,233)	499,457
Put-swaptions	3,000,000	87,588	-	-	87,588
Treasury futures	-	-	2,572,453	-	-
Total	$ 87,945,791	$ 1,486,367	$ 23,152,292	$ (24,262)	$ 1,462,105

	December 31, 2018				
	Assets		Liabilities		
	Contractual/ Notional Amount (1)	Fair Value	Contractual/ Notional Amount (1)	Fair Value	Net Fair Value
Cross-currency total return swaps	$ 432,811	$ 6,583	$ 582,150	$ (25,744)	$ (19,161)

Variable annuity embedded derivatives	523,942	-	523,942
Total	$ (3,376,666)	$ 246,221	$ (3,130,445)

All of Jackson's trade agreements for freestanding, over-the-counter derivatives contain credit downgrade provisions that allow a party to assign or terminate derivative transactions if the counterparty's credit rating declines below an established limit. At December 31, 2019 and 2018, the fair value of Jackson's net derivative assets by counterparty were $1,462.1 million and $544.6 million, respectively, and held collateral was $1,752.1 million and $669.1 million respectively, related to these agreements. At December 31, 2019 and 2018, the fair value of Jackson's net derivative liabilities by counterparty was nil and $138.4 million, respectively, and provided collateral was nil and $133.2 million, respectively, related to these agreements. If all of the downgrade provisions had been triggered at December 31, 2019 or 2018, in aggregate, Jackson would have had to disburse $290.0 million and $129.6 million, respectively, to counterparties, representing the net fair values of derivatives by counterparty, less collateral held.

Offsetting Assets and Liabilities

The Company's derivative instruments, repurchase agreements and securities lending agreements are subject to master netting arrangements and collateral arrangements. A master netting arrangement with a counterparty creates a right of offset for amounts due to and due from that same counterparty that is enforceable in the event of a default or bankruptcy. The Company recognizes amounts subject to master netting arrangements on a gross basis within the consolidated balance sheets.

The following tables present the gross and net information about the Company's financial instruments subject to master netting arrangements (in thousands):

	December 31, 2019						
				Gross Amounts Not Offset in the Consolidated Balance Sheets			
	Gross Amounts Recognized	Gross Amounts Offset in the Consolidated Balance Sheets	Net Amounts Presented in the Consolidated Balance Sheets	Financial Instruments(1)	Cash Collateral	Securities Collateral (2)	Net Amount
Financial Assets:							
Derivative assets	$ 1,486,367	$ -	$ 1,486,367	$ 24,262	$ 820,674	$ 617,770	$ 23,661
Financial Liabilities:							
Derivative liabilities	$ 24,262	$ -	$ 24,262	$ 24,262	$ -	$ -	$ -
Securities loaned	48,318	-	48,318	-	48,318	-	-
Total financial liabilities	$ 72,580	$ -	$ 72,580	$ 24,262	$ 48,318	$ -	$ -

	December 31, 2018						
				Gross Amounts Not Offset in the Consolidated Balance Sheets			
	Gross Amounts Recognized	Gross Amounts Offset in the Consolidated Balance Sheets	Net Amounts Presented in the Consolidated Balance Sheets	Financial Instruments(1)	Cash Collateral	Securities Collateral (2)	Net Amount
Financial Assets:							
Derivative assets	$ 730,637	$ -	$ 730,637	$ 186,011	$ 328,687	$ 210,733	$ 5,206
Financial Liabilities:							
Derivative liabilities	$ 324,389	$ -	$ 324,389	$ 186,011	$ -	$ 126,987	$ 11,391
Securities loaned	43,470	-	43,470	-	43,470	-	-
Total financial liabilities	$ 367,859	$ -	$ 367,859	$ 186,011	$ 43,470	$ 126,987	$ 11,391

(1) Represents the amount that could be offset under master netting or similar arrangements that management elects not to offset on the consolidated balance sheets.

(2) Excludes initial margin amounts for exchange-traded derivatives.

In the above tables, the amounts of assets or liabilities presented in the Company's consolidated balance sheets are offset first by financial instruments that have the right of offset under master netting or similar arrangements with any remaining amount reduced by the amount of cash and securities collateral. The actual amount of collateral may be greater than amounts presented in the tables. The above tables exclude net embedded derivative liabilities of $4,172.0 million and

$3,948.0 million for 2019 and 2018, respectively, as these derivatives are not subject to master netting arrangements. In addition, repurchase agreements are presented within other liabilities in the consolidated balance sheets.

5. Fair Value Measurements

The following table summarizes the fair value and carrying value of Jackson's financial instruments (in thousands). The basis for determining the fair value of each instrument is described in Note 2.

	December 31, 2019		December 31, 2018	
	Carrying Value	Fair Value	Carrying Value	Fair Value
Assets				
Debt securities [1]	$ 56,974,022	$ 56,974,022	$ 51,865,357	$ 51,865,357
Equity securities	1,531,780	1,531,780	1,748,395	1,748,395
Commercial mortgage loans	9,903,569	10,232,092	9,405,897	9,282,225
Policy loans [1]	4,705,744	4,705,744	4,687,437	4,687,437
Derivative instruments	1,486,367	1,486,367	730,637	730,637
FHLBI capital stock	125,415	125,415	125,415	125,415
Cash and cash equivalents	1,843,787	1,843,787	3,741,713	3,741,713
GMIB reinsurance recoverable	302,796	302,796	300,600	300,600
Receivables from affiliates	247,770	247,770	283,793	283,793
Separate account assets	195,070,474	195,070,474	163,301,375	163,301,375
Liabilities				
Other contract holder funds				
Annuity reserves [2]	$ 40,818,140	$ 47,985,566	$ 38,678,108	$ 42,728,096
Reserves for guaranteed investment contracts	1,529,591	1,569,453	1,665,967	1,649,954
Trust instruments supported by funding agreements	8,852,566	9,086,798	7,298,432	7,322,631
Federal Home Loan Bank funding agreements	1,904,935	1,925,047	1,935,710	1,911,207
Funds held under reinsurance treaties	3,760,294	3,760,294	3,745,074	3,745,074
Debt	574,724	660,112	615,733	683,675
Securities lending payable	48,318	48,318	43,470	43,470
Derivative instruments	24,262	24,262	324,389	324,389
Federal Home Loan Bank advances	300,140	300,140	-	-
Separate account liabilities	195,070,474	195,070,474	163,301,375	163,301,375

(1) Includes items carried at fair value under the fair value option, for which there is a corresponding liability within funds held under reinsurance treaties.

(2) Annuity reserves represent only the components of other contract holder funds and reserves for future policy benefits and claims payable that are considered to be financial instruments.

The following is a discussion of the methodologies used to determine fair values of the financial instruments measured on both a recurring and nonrecurring basis reported in the following tables.

Debt and Equity Securities

The fair values for debt and equity securities (excluding limited partnerships, further described below) are determined using information available from independent pricing services, broker-dealer quotes, or internally derived estimates. Priority is given to publicly available prices from independent sources, when available. Securities for which the independent pricing service does not provide a quotation are either submitted to independent broker-dealers for prices or priced internally. Typical inputs used by these three pricing methods include, but are not limited to, reported trades, benchmark yields, credit spreads, liquidity premiums and/or estimated cash flows based on default and prepayment assumptions.

As a result of typical trading volumes and the lack of specific quoted market prices for most debt securities, independent pricing services will normally derive the security prices through recently reported trades for identical or similar securities, making adjustments through the reporting date based upon available market observable information as outlined above. If there are no recently reported trades, the independent pricing services and broker-dealers may use matrix or pricing model processes to develop a security price where future cash flow expectations are developed based upon collateral performance and discounted at relevant market rates. Certain securities are priced using broker-dealer quotes, which may utilize proprietary inputs and models. Additionally, the majority of these quotes are non-binding.

Included in the pricing of asset-backed securities are estimates of the rate of future prepayments of principal over the remaining life of the securities. Such estimates are derived based on the characteristics of the underlying structure and prepayment assumptions believed to be relevant for the underlying collateral. Actual prepayment experience may vary from these estimates.

Internally derived estimates may be used to develop a fair value for securities for which the Company is unable to obtain either a reliable price from an independent pricing service or a suitable broker-dealer quote. These fair value estimates may incorporate Level 2 and Level 3 inputs and are generally derived using expected future cash flows, discounted at market interest rates available from market sources based on the credit quality and duration of the instrument. For securities that may not be reliably priced using these internally developed pricing models, a fair value may be estimated using indicative market prices. These prices are indicative of an exit price, but the assumptions used to establish the fair value may not be observable or corroborated by market observable information and, therefore, represent Level 3 inputs.

The Company performs a monthly analysis on the prices and credit spreads received from third parties to ensure that the prices represent a reasonable estimate of the fair value. This process involves quantitative and qualitative analysis and is overseen by investment and accounting professionals. Examples of procedures performed include, but are not limited to, initial and ongoing review of third party pricing service methodologies, review of pricing statistics and trends, back testing recent trades and monitoring of trading volumes. In addition, the Company considers whether prices received from independent broker-dealers represent a reasonable estimate of fair value through the use of internal and external cash flow models, which are developed based on spreads and, when available, market indices. As a result of this analysis, if the Company determines there is a more appropriate fair value based upon the available market data, the price received from the third party may be adjusted accordingly.

For those securities that were internally valued at December 31, 2019 and 2018, the pricing model used by the Company utilizes current spread levels of similarly rated securities to determine the market discount rate for the security. Furthermore, appropriate risk premiums for illiquidity and non-performance are incorporated in the discount rate. Cash flows, as estimated by the Company using issuer-specific default statistics and prepayment assumptions, are discounted to determine an estimated fair value.

On an ongoing basis, the Company reviews the independent pricing services' valuation methodologies and related inputs, and evaluates the various types of securities in its investment portfolio to determine an appropriate fair value hierarchy distribution based upon trading activity and the observability of market inputs. Based on the results of this evaluation, each price is classified into Level 1, 2, or 3. Most prices provided by independent pricing services, including broker-dealer quotes, are classified into Level 2 due to their use of market observable inputs.

Limited Partnerships

Fair value for limited partnership interests, which are included in equity securities, is generally determined using the proportion of Jackson's investment in each fund ("NAV equivalent") as a practical expedient for fair value. No adjustments to these amounts were deemed necessary at December 31, 2019 or 2018. As a result of using the net asset value per share practical expedient, limited partnership interests are not classified in the fair value hierarchy.

The Company's limited partnership interests are not redeemable and distributions received are generally the result of liquidation of the underlying assets of the partnerships. The term of Jackson's interest in the partnerships is generally ten years, but may be extended for a period of time under provisions within the partnership agreements, if applicable. The Company generally has the ability under the partnership agreements to sell its interest to another limited partner with the prior written consent of the general partner. In cases when the Company expects to sell the limited partnership interest, the estimated sales price is used to determine the fair value. These limited partnership interests are classified as Level 2 in the fair value hierarchy.

In cases when a limited partnership's financial statements are unavailable and an NAV equivalent is not available or practical, an internally developed model is used to determine fair value for that fund. These investments are classified as Level 3 in the fair value hierarchy.

Commercial Mortgage Loans
Fair values are generally determined by discounting expected future cash flows at current market interest rates, inclusive of a credit spread, for similar quality loans. For loans whose value is dependent upon the underlying property, fair value is determined to be the estimated value of the collateral. Certain characteristics considered significant in determining the spread or collateral value may be based on internally developed estimates. As a result, these investments have been classified as Level 3 within the fair value hierarchy.

Policy Loans
Policy loans are funds provided to policyholders in return for a claim on the policies values and function like demand deposits which are redeemable upon repayment, death or surrender, and there is only one market price at which the transaction could be settled – the then current carrying value. The funds provided are limited to the cash surrender value of the underlying policy. The nature of policy loans is to have a negligible default risk as the loans are fully collateralized by the value of the policy. Policy loans do not have a stated maturity and the balances and accrued interest are repaid either by the policyholder or with proceeds from the policy. Due to the collateralized nature of policy loans and unpredictable timing of payments, the Company believes the carrying value of policy loans approximates fair value.

FHLBI Capital Stock
FHLBI capital stock, which is included in other invested assets, can only be sold to FHLBI at a constant price of $100 per share. Due to the lack of valuation uncertainty, the investment has been classified as Level 1.

Freestanding Derivative Instruments
Freestanding derivative instruments are reported at fair value, which reflects the estimated amounts, net of payment accruals, which the Company would receive or pay upon sale or termination of the contracts at the reporting date. Changes in fair value are included in other net investment losses. Freestanding derivatives priced using third party pricing services incorporate inputs that are predominantly observable in the market. Inputs used to value derivatives include, but are not limited to, interest rate swap curves, credit spreads, interest rates, counterparty credit risk, equity volatility and equity index levels.

Freestanding derivative instruments classified as Level 1 include futures, which are traded on active exchanges. Freestanding derivative instruments classified as Level 2 include interest rate swaps, cross currency swaps, credit default swaps, put-swaptions and certain equity index call and put options. These derivative valuations are determined by third-party pricing services using pricing models with inputs that are observable in the market or can be derived principally from, or corroborated by, observable market data. Freestanding derivative instruments classified as Level 3 include interest rate contingent options that are valued by third-party pricing services utilizing significant unobservable inputs.

Cash and Cash Equivalents
Cash and cash equivalents primarily include money market instruments and bank deposits. Certain money market instruments are valued using unadjusted quoted prices in active markets and are classified as Level 1.

Receivables from Affiliates
The Company's receivables from affiliates are set equal to the carrying value and are classified as Level 3.

Separate Account Assets and Liabilities
Separate account assets are comprised of investments in mutual funds that transact regularly, but do not trade in active markets as they are not publicly available, and are categorized as Level 2 assets. The values of separate account liabilities are set equal to the values of separate account assets.

Other Contract Holder Funds
Fair values for immediate annuities without mortality features are derived by discounting the future estimated cash flows using current market interest rates for similar maturities. Fair values for deferred annuities, including fixed index annuities, are determined using projected future cash flows discounted at current market interest rates.

The fair value of the fixed index annuities embedded option, incorporating such factors as the volatility of returns, the level of interest rates and the time remaining until the option expires, is calculated using the closed form Black-Scholes Option Pricing model or Monte Carlo simulations, as appropriate for the type of option. Additionally, assumed withdrawal rates are used to estimate the expected volume of embedded options that will be realized by policyholders.

Fair values for guaranteed investment contracts are based on the present value of future cash flows discounted at current market interest rates.

Fair values for trust instruments supported by funding agreements are based on the present value of future cash flows discounted at current market interest rates, plus the fair value of any embedded derivatives that are not required to be reported separately.

Fair values of the FHLBI funding agreements are based on the present value of future cash flows discounted at current market interest rates.

Funds Held Under Reinsurance Treaties
The fair value of the funds held is equal to the fair value of the assets held as collateral, which primarily consist of policy loans and debt securities.

Debt
Fair values for the Company's surplus notes and other long-term debt are generally determined by prices obtained from independent broker dealers or discounted cash flow models. Such prices are derived from market observable inputs and are classified as Level 2. The Squire Surplus Note is set equal to the carrying value and is classified as Level 3.

Securities Lending Payable
The Company's securities lending payable is set equal to the cash collateral received. Due to the short-term nature of the loans, carrying value is a reasonable estimate of fair value and is classified as Level 2.

Repurchase Agreements
Carrying value of the Company's repurchase agreements, which are included in other liabilities, is considered a reasonable estimate of fair value due to their short-term maturities and are classified as Level 2.

Federal Home Loan Bank Advances
Carrying value of the Company's Federal Home Loan Bank advances, which are included in other liabilities, is considered a reasonable estimate of fair value due to their short-term maturities and are classified as Level 2.

Certain Guaranteed Benefits
Variable annuity contracts issued by the Company offer various guaranteed minimum death, withdrawal, income and accumulation benefits. Certain benefits, primarily non-life contingent components of guaranteed minimum withdrawal benefits ("GMWB"), guaranteed minimum accumulation benefits ("GMAB") and the reinsurance recoverable on the Company's guaranteed minimum income benefits ("GMIB"), are recorded at fair value. Guaranteed benefits that are not subject to fair value accounting are accounted for as insurance benefits.

Non-life contingent components of GMWBs and GMABs are recorded at fair value with changes in fair value recorded in other net investment losses. The fair value of the reserve is based on the expectations of future benefit payments and certain future fees associated with the benefits. At the inception of the contract, the Company attributes to the embedded derivative a portion of rider fees collected from the contract holder, which is then held static in future valuations. Those fees, generally referred to as the attributed fees, are set such that the present value of the attributed fees is equal to the present value of future claims expected to be paid under the guaranteed benefit at the inception of the contract. In subsequent valuations, both the present value of future benefits and the present value of attributed fees are revalued based on current market conditions and policyholder behavior assumptions. The difference between each of the two components represents the fair value of the embedded derivative. Jackson discontinued offering the GMAB in 2011.

Jackson's GMIB book is reinsured through an unrelated party and, due to the net settlement provisions of the reinsurance agreement, this contract meets the definition of a derivative. Accordingly, the GMIB reinsurance agreement is recorded at fair value, with changes in fair value recorded in other net investment losses. Due to the inability to economically reinsure or hedge new issues of the GMIB, the Company discontinued offering the benefit in 2009.

Fair values for GMWB and GMAB embedded derivatives, as well as GMIB reinsurance recoverables, are calculated using internally developed models because active, observable markets do not exist for those guaranteed benefits.

The fair value calculation is based on the present value of future cash flows comprised of future expected benefit payments, less future attributed rider fees, over the lives of the contracts. Estimating these cash flows requires numerous estimates and subjective judgments related to capital market inputs, as well as actuarially determined assumptions related to expectations concerning policyholder behavior. Capital market inputs include expected market rates of return, market volatility, correlations of market index returns to funds, fund performance and discount rates. The more significant actuarial assumptions include benefit utilization by policyholders, persistency, mortality, and withdrawal rates. Best estimate assumptions plus risk margins are used as applicable.

At each valuation date, the Company assumes expected returns based on the greater of LIBOR swap rates and constant maturity treasury rates as of that date to determine the value of expected future cash flows produced in a stochastic process. Volatility assumptions are based on a weighting of available market data for implied market volatility for durations up to 10 years, grading to a historical volatility level by year 15, where such long-term historical volatility levels contain an explicit risk margin. Additionally, non-performance risk is incorporated into the calculation through the use of discount rates based on a AA corporate credit curve as an approximation of Jackson's own credit risk. Risk margins are also incorporated into the model assumptions, particularly for policyholder behavior. Estimates of future policyholder behavior are subjective and are based primarily on the Company's experience.

As markets change, mature and evolve and actual policyholder behavior emerges, management continually evaluates the appropriateness of its assumptions for this component of the fair value model.

The use of the models and assumptions described above requires a significant amount of judgment. Management believes the aggregation of each of these components results in an amount that the Company would be required to transfer for a liability, or receive for an asset, to or from a willing buyer or seller, if one existed, for those market participants to assume the risks associated with the guaranteed benefits and the related reinsurance. However, the ultimate settlement amount of the asset or liability, which is currently unknown, could likely be significantly different than this fair value.

Assets and Liabilities Measured at Fair Value on a Recurring Basis
The following tables summarize the Company's assets and liabilities that are carried at fair value by hierarchy levels (in thousands):

	December 31, 2019			
	Total	Level 1	Level 2	Level 3
Assets				
Debt securities				
U.S. government securities	$ 6,135,749	$ 6,135,749	$ -	$ -

Sensitivity to Changes in Unobservable Inputs
The following is a general description of sensitivities of significant unobservable inputs and their impact on the fair value measurement for the assets and liabilities reflected in the table above.

As of December 31, 2019 and 2018, securities of $2.4 million and $112 thousand, respectively, are fair valued using techniques incorporating unobservable inputs and are classified in Level 3 of the fair value hierarchy. For these assets, their unobservable inputs and ranges of possible inputs do not materially affect their fair valuations and have been excluded from the quantitative information in the table above.

The GMIB reinsurance recoverable fair value calculation is based on the present value of future cash flows comprised of future expected reinsurance benefit receipts, less future attributed premium payments to reinsurers, over the lives of the contracts. Estimating these cash flows requires actuarially determined assumptions related to expectations concerning policyholder behavior and long-term market volatility. The more significant policyholder behavior actuarial assumptions include benefit utilization, fund allocation, persistency, and mortality. In general, an increase (decrease) in assumed benefit utilization would increase (decrease) the fair value of the reinsurance recoverable; an increase (decrease) in allocation to equity funds would increase (decrease) the fair value of the reinsurance recoverable; an increase (decrease) in assumed persistency would increase (decrease) the fair value of the reinsurance recoverable; an increase (decrease) in assumed mortality would decrease (increase) the fair value of the reinsurance recoverable; and an increase (decrease) in long-term market volatility would increase (decrease) the fair value of the reinsurance recoverable.

Embedded derivative liabilities classified in Level 3 represent the fair value of GMWB and GMAB liabilities. These fair value calculations are based on the present value of future cash flows comprised of future expected benefit payments, less future attributed rider fees, over the lives of the contracts. Estimating these cash flows requires actuarially determined assumptions related to expectations concerning policyholder behavior and long-term market volatility. The more significant policyholder behavior actuarial assumptions include benefit utilization, fund allocation, persistency, and mortality. In general, an increase (decrease) in assumed benefit utilization would increase (decrease) the fair value of the liabilities; an increase (decrease) in allocation to equity funds would increase (decrease) the fair value of the liabilities; an increase (decrease) in assumed persistency would increase (decrease) the fair value of the liabilities; an increase (decrease) in assumed mortality would decrease (increase) the fair value of the liabilities; and an increase (decrease) in long-term market volatility would increase (decrease) the fair value of the liabilities.

The tables below provide rollforwards for 2019 and 2018 of the financial instruments for which significant unobservable inputs (Level 3) are used in the fair value measurement. Gains and losses in the table below include changes in fair value due partly to observable and unobservable factors. The Company utilizes derivative instruments to manage the risk associated with certain assets and liabilities. However, the derivative instruments hedging the related risks may not be classified within the same fair value hierarchy level as the associated assets and liabilities. Therefore, the impact of the derivative instruments reported in Level 3 may vary significantly from the total income effect of the hedged instruments. Additionally, the Company's policy for determining and disclosing transfers between levels is to recognize transfers using beginning of period balances.

Liabilities					
Funds held under reinsurance treaties	$ -	$ -	$ (496,705)	$ 356,682	$ (140,023)

In 2019, $1.8 million was transferred from NAV to Level 3 as a result of using significant unobservable inputs since an NAV was not available. There were no transfers from Level 3 to Level 2 of the fair value hierarchy during 2019 and 2018. There were no transfers from Level 2 to Level 3 during 2019 and 2018. There were no transfers between Level 1 and 2 of the fair value hierarchy in 2019 or 2018.

The portion of gains (losses) included in net income or other comprehensive income attributable to the change in unrealized gains and losses on Level 3 financial instruments still held at December 31, 2019 and 2018 was as follows (in thousands):

	2019	**2018**
Assets		
Equity securities	$ 444	$ -
Derivative instruments	-	(2,505)
GMIB reinsurance recoverable	2,196	48,463
Liabilities		
Embedded derivative liabilities	$ 259,273	$ (1,338,551)
Funds held under reinsurance treaties	(3,844)	475

Fair Value of Financial Instruments Carried at Other Than Fair Value

The table below presents the carrying amount and fair value by fair value hierarchy level of certain financial instruments that are not reported at fair value (in thousands).

	Fair Value Hierarchy Level	December 31, 2019 Carrying Value	December 31, 2019 Fair Value	December 31, 2018 Carrying Value	December 31, 2018 Fair Value
Assets					
Commercial mortgage loans	Level 3	$ 9,903,569	$ 10,232,092	$ 9,405,897	$ 9,282,225
Policy loans	Level 3	1,119,906	1,119,906	1,143,757	1,143,757
FHLBI capital stock	Level 1	125,415	125,415	125,415	125,415
Receivables from affiliates	Level 3	247,770	247,770	283,793	283,793
Liabilities					
Other contract holder funds					
Annuity reserves [(1)]	Level 3	$ 36,646,186	$ 43,813,612	$ 34,730,152	$ 38,780,140
Reserves for guaranteed investment contracts	Level 3	1,529,591	1,569,453	1,665,967	1,649,954
Trust instruments supported by funding agreements	Level 3	8,852,566	9,086,798	7,298,432	7,322,631
Federal Home Loan Bank funding agreements	Level 3	1,904,935	1,925,047	1,935,710	1,911,207
Debt - Squire Surplus Note	Level 3	247,770	247,770	283,793	283,793
Debt - all other	Level 2	326,954	412,342	331,940	399,882
Securities lending payable	Level 2	48,318	48,318	43,470	43,470
Federal Home Loan Bank advances	Level 2	300,140	300,140	-	-
Separate account liabilities [(2)]	Level 2	195,070,474	195,070,474	163,301,375	163,301,375

(1) Annuity reserves represent only the components of other contract holder funds that are considered to be financial instruments.
(2) The values of separate account liabilities are set equal to the values of separate account assets.

Fair Value Option

The Company elected the fair value option for certain assets, which are held as collateral for reinsurance. Accordingly, the Company established a funds held liability, for which the Company also elected the fair value option. The value of the funds held liability is equal to the fair value of the assets held as collateral. The income and any changes in unrealized gains and losses on these assets and the corresponding funds held liability are included in net investment income and have no impact on the Company's consolidated income statements. Income and changes in unrealized gains and losses on other assets for which the Company has elected the fair value option are immaterial to the Company's consolidated financial statements.

6. Deferred Acquisition Costs and Deferred Sales Inducements

The balances of and changes in deferred acquisition costs, as of and for the years ended December 31, were as follows (in thousands):

	2019	2018	2017
Balance, beginning of year	$ 10,412,327	$ 10,509,849	$ 9,678,063
Deferrals of acquisition costs	796,908	747,095	839,143
Amortization related to:			
Operations	(235,278)	(971,836)	(506,326)
Derivatives	1,247,418	(148,053)	579,923
Net realized losses (gains)	(8,897)	498	3,965
Total amortization	1,003,243	(1,119,391)	77,562
Unrealized investment losses (gains)	(547,248)	274,774	(84,919)
Balance, end of year	$ 11,665,230	$ 10,412,327	$ 10,509,849

The balances of and changes in deferred sales inducements, which are reported in other assets, as of and for the years ended December 31, were as follows (in thousands):

	2019	2018	2017
Balance, beginning of year	$ 670,494	$ 644,006	$ 696,636
Deferrals of sales inducements	10,224	12,109	14,877
Amortization related to:			
Operations	(20,970)	(31,802)	(64,178)
Derivatives	203	(129)	13,483
Net realized losses (gains)	(1,053)	76	625
Total amortization	(21,820)	(31,855)	(50,070)
Unrealized investment losses (gains)	(79,831)	46,234	(17,437)
Balance, end of year	$ 579,067	$ 670,494	$ 644,006

7. Reinsurance

The Company assumes and cedes reinsurance from and to other insurance companies in order to limit losses from large exposures. However, if the reinsurer is unable to meet its obligations, the originating issuer of the coverage retains the liability. The Company reinsures certain of its risks to other reinsurers under a coinsurance, modified coinsurance, yearly renewable term, or, with Brooke Life, a monthly renewable term basis. The Company regularly monitors the financial strength rating of its reinsurers.

The Company has also acquired certain lines of business that are wholly ceded to non-affiliates. These include both direct and assumed accident and health business, direct and assumed life insurance business, and certain institutional annuities.

Effective October 1, 2018, the Company entered into a reinsurance agreement with John Hancock to assume its U.S. Group Payout Annuity business. The transaction is structured as indemnity reinsurance by Jackson of John Hancock's approximately 186,000 Group Payout Annuity certificates representing $5.0 billion of assumed premiums, ceding commission income of $555.0 million and $5.5 billion of reserves.

Effective March 15, 2019, the Company closed on a 90% reinsurance agreement with John Hancock Life Insurance Company of New York ("JHNY") to assume its Group Payout Annuity business. The transaction is structured as indemnity reinsurance by Jackson of JHNY's approximately 18,000 Group Payout Annuity certificates representing $0.5 billion of reserves.

On May 29, 2019, the Michigan Department of Insurance and Financial Services revoked the status of Scottish RE (U.S.), Inc. as an accredited reinsurer in Michigan. The Company wrote off $6.1 million of paid claims recoverable in 2019 as it was deemed probable that the Company would not recover the balance. At December 31, 2019, an allowance of $42.5 million was established for the ceded reserve.

Jackson's GMIBs are reinsured with an unrelated party and, due to the net settlement provisions of the reinsurance agreement, meet the definition of a derivative. Accordingly, the GMIB reinsurance agreement is recorded at fair value on the Company's consolidated balance sheets, with changes in fair value recorded in other net investment losses. GMIB reinsured benefits are subject to aggregate annual claim limits. Deductibles also apply on reinsurance of GMIB business issued since March 1, 2005.

The Company has three retro treaties with SRZ. Pursuant to these retro treaties, the Company ceded to SRZ on a 100% coinsurance basis, subject to pre-existing reinsurance with other parties, certain blocks of business. These blocks of business include disability income and accident and health business, a mix of life and annuity insurance business, and corporate owned life insurance business.

Pursuant to the retro treaties, the Company holds certain assets, primarily policy loans and debt securities, as collateral. This collateral is reported as a liability as funds held under reinsurance treaties on the consolidated balance sheets. This funds held liability was $3.8 billion and $3.7 billion at December 31, 2019 and 2018, respectively.

The effect of reinsurance on premium was as follows (in thousands):

	Years Ended December 31, 2019	2018	2017
Direct premium:			
Life	$ 517,674	$ 459,025	$ 518,819
Accident and health	40,114	43,855	49,180
Plus reinsurance assumed:			
Life	44,331	41,603	68,290
Group payout annuity	406,078	4,983,165	-
Accident and health	5,885	6,898	8,098
Less reinsurance ceded:			
Life	(417,495)	(346,662)	(402,803)
Annuity guaranteed benefits	(13,458)	(14,307)	(15,227)
Accident and health	(45,999)	(50,754)	(57,278)
Total premium	$ 537,130	$ 5,122,823	$ 169,079

The effect of reinsurance on benefits was as follows (in thousands):

	Years Ended December 31, 2019	2018	2017
Direct benefits:			
Life	$ 1,145,775	$ 1,180,590	$ 1,261,108
Accident and health	125,245	139,546	132,471
Annuity guaranteed benefits	132,363	103,216	101,326
Plus reinsurance assumed:			
Life	244,867	239,582	248,917
Group payout annuity	523,529	125,050	-
Accident and health	25,104	24,154	26,731
Less reinsurance ceded:			
Life	(512,078)	(530,953)	(576,447)
Accident and health	(150,349)	(163,700)	(159,202)
Deferral of contract enhancements	(3,090)	(3,622)	(4,382)
Group payout annuity reserves assumed	59,089	5,482,451	-
Change in reserves, net of reinsurance	(160,448)	345,834	(7,000)
Total benefits	$ 1,430,007	$ 6,942,148	$ 1,023,522

Components of the Company's reinsurance recoverable were as follows (in thousands):

	December 31, 2019	2018
Reserves:		
Life	$ 6,420,069	$ 6,491,616
Accident and health	588,767	589,513
Guaranteed minimum income benefits	302,796	300,600
Other annuity benefits	186,836	198,540
Claims liability	895,690	915,815
Other	16,007	1,762
Total	$ 8,410,165	$ 8,497,846

Included in the reinsurance recoverable were reserves ceded to Brooke Life of $34.7 million and $36.5 million at December 31, 2019 and 2018, respectively. At December 31, 2019, the largest amount ceded to any reinsurer totaled $6.0 billion, which was primarily related to the retro treaties, which are fully collateralized.

The following table sets forth the Company's net life insurance in-force (in millions):

	December 31,	
	2019	**2018**
Direct life insurance in-force	$ 142,233	$ 165,033
Amounts assumed from other companies	18,206	19,214
Amounts ceded to other companies	(99,495)	(114,847)
Net life insurance in-force	$ 60,944	$ 69,400

8. Reserves for Future Policy Benefits and Claims Payable and Other Contract Holder Funds

The following table sets forth the Company's reserves for future policy benefits and claims payable balances (in thousands):

	December 31,	
	2019	**2018**
Traditional life	$ 5,008,949	$ 5,118,909
Guaranteed benefits	5,378,099	5,734,349
Claims payable	1,007,850	988,614
Accident and health	1,290,134	1,327,438
Group payout annuities	5,541,540	5,482,451
Other	901,869	958,038
Total	$ 19,128,441	$ 19,609,799

For traditional life insurance contracts, which include term and whole life, reserves are determined using the net level premium method and assumptions as of the issue date or acquisition date as to mortality, interest rates, persistency and expenses, plus provisions for adverse deviation. These assumptions are not unlocked unless the reserve is determined to be deficient.

The Company's liability for future policy benefits also includes liabilities for guaranteed benefits related to certain nontraditional long-duration life and annuity contracts, which are further discussed in Note 9.

The following table sets forth the Company's liabilities for other contract holder funds balances (in thousands):

	December 31,	
	2019	**2018**
Interest-sensitive life	$ 12,268,931	$ 12,514,825
Variable annuity fixed option	8,230,565	8,545,541
Fixed annuity	17,203,207	17,380,310
Fixed index annuity	14,058,602	11,108,471
GICs, funding agreements and FHLB advances	12,287,091	10,900,108
Total	$ 64,048,396	$ 60,449,255

For interest-sensitive life contracts, liabilities approximate the policyholder's account value, plus the remaining balance of the fair value adjustment related to previously acquired business, which is further discussed below. The liability for fixed index annuities is based on three components, 1) the imputed value of the underlying guaranteed host contract, 2) the fair value of the embedded option component of the contract, and 3) the liability for guaranteed benefits related to the optional lifetime income rider. For fixed annuities and other investment contracts, as detailed in the above table, the liability is the policyholder's account value, plus the unamortized balance of the fair value adjustment related to previously acquired business. At December 31, 2019, the Company had interest sensitive life business with minimum guaranteed interest rates ranging from 2.5% to 6.0%, with a 4.68% average guaranteed rate and fixed interest rate annuities with minimum guaranteed rates ranging from 1.0% to 5.5%, with a 2.35% average guaranteed rate.

The Company recorded a fair value adjustment related to certain annuity and interest sensitive liability blocks of business to reflect the cost of the interest guarantees within the inforce liabilities, based on the difference between the guaranteed interest rate and an assumed new money guaranteed interest rate. This adjustment was recorded in reserves for future policy benefits and claims payable. This component of the reserve is reassessed at the end of each period, taking into account changes in the inforce block. Any resulting change in the reserve is recorded as a change in reserve through the consolidated income statements.

At both December 31, 2019 and 2018, approximately 88% of the Company's fixed interest rate annuity account values correspond to crediting rates that are at the minimum guaranteed interest rates. The following tables show the distribution of the fixed interest rate annuities' account values within the presented ranges of minimum guaranteed interest rates (in millions):

	December 31, 2019			
Minimum	**Account Value**			
Guaranteed Interest Rate	**Fixed**	**Fixed Index**	**Variable**	**Total**
1.0%	$ 2,798.8	$ 4,151.2	$ -	$ 6,950.0
>1.0% - 2.0%	1,710.9	6,068.9	5,206.2	12,986.0
>2.0% - 3.0%	7,047.4	3,838.5	2,560.3	13,446.2
>3.0% - 4.0%	1,561.4	-	-	1,561.4
>4.0% - 5.0%	2,236.4	-	-	2,236.4
>5.0% - 5.5%	278.2	-	-	278.2
Total	$ 15,633.1	$ 14,058.6	$ 7,766.5	$ 37,458.2

	December 31, 2018			
Minimum	**Account Value**			
Guaranteed Interest Rate	**Fixed**	**Fixed Index**	**Variable**	**Total**
1.0%	$ 3,184.6	$ 1,887.8	$ 4,585.3	$ 9,657.7
>1.0% - 2.0%	883.4	6,377.1	1,372.9	8,633.4
>2.0% - 3.0%	7,533.5	2,843.6	2,189.6	12,566.7
>3.0% - 4.0%	1,622.5	-	-	1,622.5
>4.0% - 5.0%	2,285.4	-	-	2,285.4
>5.0% - 5.5%	286.1	-	-	286.1
Total	$ 15,795.5	$ 11,108.5	$ 8,147.8	$ 35,051.8

At both December 31, 2019 and 2018, approximately 81% of the Company's interest sensitive life business account values correspond to crediting rates that are at the minimum guaranteed interest rates. The following table shows the distribution of the interest sensitive life business account values within the presented ranges of minimum guaranteed interest rates, excluding the business that is subject to the previously mentioned retro treaties (in millions):

	December 31,	
Minimum	**2019**	**2018**
Guaranteed Interest Rate	**Account Value - Interest Sensitive Life**	
>2.0% - 3.0%	$ 270.6	$ 291.2
>3.0% - 4.0%	3,017.6	3,048.9
>4.0% - 5.0%	2,596.5	2,682.7
>5.0% - 6.0%	2,031.2	2,168.4
Subtotal	7,915.9	8,191.2
Retro treaties	4,353.0	4,323.6
Total	$ 12,268.9	$ 12,514.8

The Company had established a European Medium Term Note program, with up to $5.8 billion in aggregate principal amount outstanding at any one time. Jackson National Life Funding, LLC was formed as a special purpose vehicle solely for the purpose of issuing Medium Term Note instruments to institutional investors, the proceeds of which are deposited with Jackson and secured by the issuance of funding agreements. The remaining series under this program matured in August 2019. The carrying value at December 31, 2018 totaled $(11.1) million.

The Company has established a $23.0 billion aggregate Global Medium Term Note program. Jackson National Life Global Funding was formed as a statutory business trust, solely for the purpose of issuing Medium Term Note instruments to institutional investors, the proceeds of which are deposited with Jackson and secured by the issuance of funding agreements. The carrying values at December 31, 2019 and 2018 totaled $8.9 billion and $7.3 billion, respectively.

Those Medium Term Note instruments issued in a foreign currency have been hedged for changes in exchange rates using cross-currency swaps. The fair value of derivatives embedded in funding agreements, as well as unrealized foreign currency transaction gains and losses, are included in the carrying value of the trust instruments supported by funding agreements.

Trust instrument liabilities are adjusted to reflect the effects of foreign currency translation gains and losses using exchange rates as of the reporting date. Foreign currency translation gains and losses are included in other net investment losses.

Jackson and Squire Re are members of the FHLBI primarily for the purpose of participating in the bank's mortgage-collateralized loan advance program with short-term and long-term funding facilities. Advances are in the form of short-term or long-term notes or funding agreements issued to FHLBI. At both December 31, 2019 and 2018, the Company held $125.4 million of FHLBI capital stock, supporting $2.3 billion and $2.0 billion in funding agreements, short-term and long-term borrowing capacity in 2019 and 2018, respectively.

9. Certain Nontraditional Long-Duration Contracts and Variable Annuity Guarantees

The Company issues variable contracts through its separate accounts for which investment income and investment gains and losses accrue directly to, and investment risk is borne by, the contract holder ("traditional variable annuities"). The Company also issues variable annuity and life contracts through separate accounts where the Company contractually guarantees to the contract holder ("variable contracts with guarantees") either a) return of no less than total deposits made to the account adjusted for any partial withdrawals, b) total deposits made to the account adjusted for any partial withdrawals plus a minimum return, or c) the highest account value on a specified anniversary date adjusted for any withdrawals following the contract anniversary. These guarantees include benefits that are payable in the event of death (GMDB), at annuitization (GMIB), upon the depletion of funds (GMWB) or at the end of a specified period (GMAB).

The assets supporting the variable portion of both traditional variable annuities and variable contracts with guarantees are carried at fair value and reported as summary total separate account assets with an equivalent summary total reported for separate account liabilities. Liabilities for guaranteed benefits are general account obligations and are reported in reserves for future policy benefits and claims payable. Amounts assessed against the contract holders for mortality, administrative, and other services are reported in revenue as fee income. Changes in liabilities for minimum guarantees are reported within death, other policy benefits and change in policy reserves within the consolidated income statements with the exception of changes in embedded derivatives, which are included in other net investment losses. Separate account net investment income, net investment realized and unrealized gains and losses, and the related liability changes are offset within the same line item in the consolidated income statements.

At December 31, 2019 and 2018, the Company provided variable annuity contracts with guarantees, for which the net amount at risk ("NAR") is defined as the amount of guaranteed benefit in excess of current account value, as follows (dollars in millions):

December 31, 2019	Minimum Return	Account Value	Net Amount at Risk	Weighted Average Attained Age	Average Period until Expected Annuitization
Return of net deposits plus a minimum return					
GMDB	0-6%	$ 150,575.7	$ 2,477.3	66.9 years	
GMWB - Premium only	0%	2,752.7	15.7		
GMWB	0-5%*	257.3	13.8		
GMAB - Premium only	0%	36.5	-		
Highest specified anniversary account value minus withdrawals post-anniversary					
GMDB		12,546.8	68.5	67.7 years	
GMWB - Highest anniversary only		3,232.4	50.9		
GMWB		697.6	55.2		
Combination net deposits plus minimum return, highest specified anniversary account value minus withdrawals post-anniversary					
GMDB	0-6%	8,158.8	686.6	70.0 years	
GMIB	0-6%	1,688.1	615.8		0.5 years
GMWB	0-8%*	140,528.5	7,159.6		

December 31, 2018	Minimum Return	Account Value	Net Amount at Risk	Weighted Average Attained Age	Average Period until Expected Annuitization
Return of net deposits plus a minimum return					
GMDB	0-6%	$ 125,644.3	$ 5,651.5	66.5 years	
GMWB - Premium only	0%	2,450.1	79.5		
GMWB	0-5%*	250.6	25.4		
GMAB - Premium only	0%	33.5	-		
Highest specified anniversary account value minus withdrawals post-anniversary					
GMDB		10,865.3	1,417.9	67.1 years	
GMWB - Highest anniversary only		2,827.4	400.2		
GMWB		681.6	113.4		
Combination net deposits plus minimum return, highest specified anniversary account value minus withdrawals post-anniversary					
GMDB	0-6%	6,946.7	1,549.9	69.5 years	
GMIB	0-6%	1,599.0	825.1		0.1 years
GMWB	0-8%*	116,901.6	21,441.6		

* Ranges shown based on simple interest. The upper limits of 5% or 8% simple interest are approximately equal to 4.1% and 6%, respectively, on a compound interest basis over a typical 10-year bonus period. The combination GMWB category also includes benefits with a defined increase in the withdrawal percentage under pre-defined non-market conditions.

Amounts shown as GMWB above include a 'not-for-life' component up to the point at which the guaranteed withdrawal benefit is exhausted, after which benefits paid are considered to be 'for-life' benefits. The liability related to this 'not-for-life' portion is valued as an embedded derivative, while the 'for-life' benefits are valued as an insurance liability (see below). For this table, the net amount at risk of the 'not-for-life' component is the undiscounted excess of the guaranteed withdrawal benefit over the account value, and that of the 'for-life' component is the estimated value of additional life contingent benefits paid after the guaranteed withdrawal benefit is exhausted.

Account balances of contracts with guarantees were invested in variable separate accounts as follows (in millions):

	December 31,	
Fund type:	2019	2018
Equity	$ 121,520.3	$ 99,834.2
Bond	19,340.4	17,704.9
Balanced	30,308.3	25,348.7
Money market	956.2	1,049.5
Total	$ 172,125.2	$ 143,937.3

GMDB liabilities reflected in the general account were as follows (in millions):

	2019	2018
Balance at January 1	$ 1,371.6	$ 946.6
Incurred guaranteed benefits	24.7	518.6
Paid guaranteed benefits	(113.4)	(93.6)
Balance at December 31	$ 1,282.9	$ 1,371.6

The GMDB liability is determined by estimating the expected value of death benefits in excess of the projected account balance and recognizing the excess ratably over the accumulation period based on total expected assessments. The Company regularly evaluates estimates used and adjusts the liability balance through the consolidated income statement, within death, other policy benefits and change in policy reserves, if actual experience or other evidence suggests that earlier assumptions should be revised.

The following assumptions and methodology were used to determine the GMDB liability at both December 31, 2019 and 2018 (except where otherwise noted):

1) Use of a series of stochastic investment performance scenarios, based on historical average market volatility.
2) Mean investment performance assumption of 7.4% after investment management fees, but before investment advisory fees and mortality and expense charges.
3) Mortality equal to 24% to 100% of the Annuity 2000 table (2018: 25% to 100%).
4) Lapse rates varying by contract type, duration and degree the benefit is in-the-money and ranging from 0.3% to 27.9% (before application of dynamic adjustments).
5) Discount rates: 7.4% on 2013 and later issues, 8.4% on 2012 and prior issues.

Most GMWB reserves are considered to be derivatives under current accounting guidance and are recognized at fair value, as previously defined, with the change in fair value reported in net income. The fair value of these liabilities is determined using stochastic modeling and inputs as further described in Note 5. The fair valued GMWB had a reserve liability of $2,790.5 million and $3,049.8 million at December 31, 2019 and 2018, respectively, and was reported in reserves for future policy benefits and claims payable.

Jackson has also issued certain GMWB products that guarantee payments over a lifetime. Reserves for the portion of these benefits after the point where the guaranteed withdrawal balance is exhausted are calculated using assumptions and methodology similar to the GMDB liability. At December 31, 2019 and 2018, these GMWB reserves totaled $161.3 million and $175.4 million, respectively, and were reported in reserves for future policy benefits and claims payable.

GMAB benefits were offered on some variable annuity plans. However, the Company no longer offers these benefits. The GMAB had an asset value that was immaterial to the consolidated financial statements at both December 31, 2019 and 2018, respectively.

The direct GMIB liability is determined at each period end by estimating the expected value of the annuitization benefits in excess of the projected account balance at the date of annuitization and recognizing the excess ratably over the accumulation period based on total expected assessments. The assumptions used for calculating the direct GMIB liability are consistent with those used for calculating the GMDB liability. At December 31, 2019 and 2018, GMIB reserves before reinsurance totaled $86.6 million and $109.7 million, respectively.

Other Liabilities – Insurance and Annuitization Benefits
The Company has established additional reserves for life insurance business for universal life ("UL") plans with secondary guarantees, interest-sensitive life ("ISWL") plans that exhibit "profits followed by loss" patterns and account balance adjustments to tabular guaranteed cash values on one interest-sensitive life plan.

Liabilities for these benefits have been established according to the methodologies described below:

	December 31, 2019			December 31, 2018		
Benefit Type	Liability (in millions)	Net Amount at Risk (in millions)	Weighted Average Attained Age	Liability (in millions)	Net Amount at Risk (in millions)	Weighted Average Attained Age
UL insurance benefit *	$ 904.1	$ 20,620.5	62.8 years	$ 890.2	$ 21,805.8	62.2 years
ISWL account balance adjustment	127.8	n/a	n/a	122.6	n/a	n/a

* Amounts for the UL benefits are for the total of the plans containing any policies having projected non-zero excess benefits and thus, may include some policies with zero projected excess benefits.

The following assumptions and methodology were used to determine the UL insurance benefit liability at December 31, 2019 and 2018:

1) Use of a series of deterministic premium persistency scenarios.
2) Other experience assumptions similar to those used in amortization of deferred acquisition costs.
3) Discount rates equal to credited interest rates, approximately 3.0% to 5.5% in both 2019 and 2018.

The Company also has a small closed block of two-tier annuities, where different crediting rates are used for annuitization and surrender benefit calculations. A liability is established to cover future annuitization benefits in excess of surrender values, and was immaterial to the consolidated financial statements at both December 31, 2019 and 2018. The Company also offers an optional lifetime income rider with certain of its fixed index annuities. The liability established for this rider was $3.3 million and $0.8 million at December 31, 2019 and 2018.

10. Debt

The aggregate carrying value of borrowings was as follows (in thousands):

	December 31, 2019 Carrying Value	December 31, 2018 Carrying Value
Surplus notes	$ 497,382	$ 533,351
FHLBI bank loans	77,342	82,382
Total	$ 574,724	$ 615,733

At December 31, 2019, the above borrowings were all due after five years.

Surplus notes

Under Michigan Insurance Law, for statutory reporting purposes, the surplus notes are not part of the legal liabilities of the Company and are considered surplus funds. Payments of interest or principal may only be made with the prior approval of the commissioner of insurance of the state of Michigan and only out of surplus earnings which the commissioner determines to be available for such payments under Michigan Insurance Law.

On March 15, 1997, Jackson issued 8.15% surplus notes in the principal amount of $250.0 million due March 15, 2027. These surplus notes were issued pursuant to Rule 144A under the Securities Act of 1933, and are unsecured and subordinated to all present and future indebtedness, policy claims and other creditor claims and may not be redeemed at the option of the Company or any holder prior to maturity. Interest is payable semi-annually on March 15^{th} and September 15^{th} of each year. Interest expense on the notes was $20.4 million in 2019, 2018, and 2017.

In conjunction with a reserve financing transaction, Squire Re II issued the Squire Surplus Note to an affiliate. The Squire Surplus Note matures December 30, 2031 and bears interest at 4.35%, payable quarterly. During 2019, 2018, and 2017 interest expense on the Squire Surplus Note was $11.0 million, $12.7 million, and $14.0 million, respectively.

Federal Home Loan Bank Loans

The Company received loans of $50.0 million from the FHLBI under its community investment program in both 2015 and 2014, which amortize on a straight line basis over the loan term. The weighted average interest rate on these loans was 2.20% in 2019 and 1.90% in 2018. The outstanding balance on these loans was $77.3 million and $82.4 million at December 31, 2019 and 2018, respectively. During 2019, 2018, and 2017, interest expense for these loans totaled $1.8 million, $1.6 million, and $805 thousand, respectively. At December 31, 2019, the loans were collateralized by mortgage-related securities and commercial mortgage loans with a carrying value of $113.5 million.

11. Federal Home Loan Bank Advances

The Company entered into a short-term advance program with the FHLBI in which interest rates were either fixed or variable based on the FHLBI cost of funds or market rates. Advances of $300.1 million and nil were outstanding at December 31, 2019 and 2018, respectively, and were recorded in other liabilities. The Company paid interest of $2.1 million, $2.6 million, and $3.4 million on such advances in 2019, 2018, and 2017, respectively.

12. Income Taxes

On December 22, 2017, the Tax Cuts and Jobs Act (the “Tax Act”) was signed into law. The Tax Act changed many aspects of the U.S. corporate income tax system, including a reduction of the U.S. federal corporate income tax rate from 35% to 21%, effective January 1, 2018. In accordance with current U.S. GAAP, the effects of changes in tax rates and laws on deferred tax balances are to be recognized in the period in which legislation is enacted. Therefore, the Company remeasured its deferred tax assets and liabilities based on the rates at which they are expected to reverse in the future, which is now 21%. As a result of this reduction, the Company recognized additional tax (benefit) expense of ($11.1) million and $355.4 million in 2018 and 2017, respectively, due to the rescaling of deferred tax assets and liabilities. In 2017, the Company also recognized a tax benefit of $141.0 million due to the impact of the Tax Act on deferred taxes related to unrealized holding gains and losses. In accordance with ASU No. 2018-02, “Reclassification of Certain Tax Effects from Accumulated Other Comprehensive Income,” this stranded tax benefit was reclassified from AOCI to retained earnings.

The components of the provision for federal income taxes were as follows (in thousands):

	Years Ended December 31,		
	2019	2018	2017
Current tax expense (benefit)	$ 299,543	$ 113,822	$ (218,106)
Deferred tax (benefit) expense	(672,923)	134,520	541,038
Income tax (benefit) expense	$ (373,380)	$ 248,342	$ 322,932

The federal income tax provisions differ from the amounts determined by multiplying pre-tax income attributable to Jackson by the statutory federal income tax rate of 21% for both 2019 and 2018 and 35% for 2017 as follows (in thousands):

	Years Ended December 31,		
	2019	2018	2017
Income taxes at statutory rate	$ (176,021)	$ 477,829	$ 264,111
Dividends received deduction	(170,841)	(114,574)	(346,330)
U.S. federal tax reform impact	-	(11,119)	355,432
Provision for uncertain tax benefit	-	4,818	32,178
Contribution of capitalized affiliate	-	(77,896)	-
Other	(26,518)	(30,716)	17,541
Income tax (benefit) expense	$ (373,380)	$ 248,342	$ 322,932
Effective tax rate	44.5%	10.9%	41.2%

Federal income taxes paid (received) were $379.3 million, $35.4 million, and $(13.2) million in 2019, 2018, and 2017, respectively.

The tax effects of significant temporary differences that gave rise to deferred tax assets and liabilities were as follows (in thousands):

	December 31,	
	2019	2018
Gross deferred tax asset		
Difference between financial reporting and the tax basis of:		
Policy reserves and other insurance items	$ 2,987,374	$ 2,741,692
Derivative investments	863,223	129,945
Deferred compensation	129,180	124,699
Net operating loss carryforward	48,091	64,869
Net unrealized loss on available for sale securities	-	117,249
Other	63,942	33,076
Total gross deferred tax asset	4,091,810	3,211,530
Gross deferred tax liability		
Difference between financial reporting and the tax basis of:		
Deferred acquisition costs and sales inducements	(2,484,066)	(2,117,561)
Other investment items	(295,062)	(330,994)
Net unrealized gains on available for sale securities	(589,366)	-
Other	(46,506)	(52,472)
Total gross deferred tax liability	(3,415,000)	(2,501,027)
Net deferred tax asset	$ 676,810	$ 710,503

The Company is required to evaluate the recoverability of its deferred tax assets and establish a valuation allowance, if necessary, to reduce its deferred tax asset to an amount that is more likely than not to be realizable. Considerable judgment and the use of estimates are required when determining whether a valuation allowance is necessary and, if so, the amount of such valuation allowance. When evaluating the need for a valuation allowance, the Company considers many factors, including: the nature and character of the deferred tax assets and liabilities; taxable income in prior carryback years; future reversals of temporary differences; the length of time carryovers can be utilized; and any tax planning strategies the Company would employ to avoid a tax benefit from expiring unused. Although realization is not assured, management believes as of December 31, 2019, it is more likely than not that the deferred tax assets will be realized. At December 31, 2019 and 2018, the Company did not have a valuation allowance.

During 2016, Jackson reached an agreement with the IRS regarding the taxation of hedging activities. This agreement requires the current taxation of all unrealized gains and losses on hedge-related investments, but then defers two-thirds of the amount ratably over the following two years. Accordingly, there is an acceleration of taxes incurred currently and a related offset to the taxes being deferred.

At December 31, 2019, the Company had a federal tax ordinary loss carryforward of $229.0 million, of which $158.0 million was attributable to a previous acquisition, which begins to expire in 2026. Section 382 of the Internal Revenue Code imposes limitations on the utilization of net operating loss carryforwards. The Section 382 limitation is an annual limitation on the amount of pre-acquisition net operating losses that a corporation may use to offset post-acquisition income. Section 382 further limits certain unrealized built-in losses at the time of acquisition. The annual limitation is approximately $21.0 million. The remaining $70.9 million of loss carryforward is attributable to NPH which was contributed to the Company as discussed in Note 1. This loss carryforward has no expiration, but is subject to an overall limitation of 80% of the tax income of the Brooke Life Consolidated tax group and the limitation on offsetting life income with non-life losses of the lesser of 35% of the loss carryforward or 35% of the tax income for the Brooke Life consolidated tax group.

The Company has considered both permanent and temporary positions in determining the unrecognized tax benefit rollforward. At December 31, 2019 and 2018, the Company held reserves related to the exclusion of short-term capital gains from the separate account dividends received deduction ("DRD") calculation and a change in the calculation of its tax basis reserves. The following table summarizes the changes in the Company's unrecognized tax benefits (in thousands):

	December 31, 2019	December 31, 2018
Unrecognized tax benefit, beginning of year	$ 36,996	$ 32,178
Additions for tax positions identified	-	4,818
Unrecognized tax benefit, end of year	$ 36,996	$ 36,996

The Company has not recorded any amounts for penalties related to unrecognized tax benefits during 2019, 2018, or 2017.

Based on information available as of December 31, 2019, the Company believes that, in the next 12 months, there are no positions for which it is reasonably possible that the total amounts of unrecognized tax benefits will significantly increase or decrease.

The Company is generally no longer subject to U.S. federal, state, and local income tax examinations by tax authorities for years prior to 2012.

13. Commitments, Contingencies, and Guarantees

The Company and its subsidiaries are involved in litigation arising in the ordinary course of business. It is the opinion of management that the ultimate disposition of such litigation will not have a material adverse affect on the Company's financial condition. Jackson has been named in civil litigation proceedings, which appear to be substantially similar to other class action litigation brought against many life insurers including allegations of misconduct in the sale of insurance products. The Company accrues for legal contingencies once the contingency is deemed to be probable and reasonably estimable. At December 31, 2019 and 2018, Jackson recorded accruals totaling $30.7 million and $28.0 million, respectively.

State guaranty funds provide payments for policyholders of insolvent life insurance companies. These guaranty funds are financed by assessing solvent insurance companies based on location, volume and types of business. The Company estimated its reserve for future state guaranty fund assessments based on data received from the National Organization of Life and Health Insurance Guaranty Associations. Based on data received, the Company's reserve for future state guaranty fund assessments was $2.6 million and $2.8 million at the end of 2019 and 2018, respectively. At December 31, 2019 and 2018, related premium tax offsets were $0.8 million and $1.0 million, respectively. While Jackson cannot predict the amount and timing of any future assessments, the Company believes the reserve is adequate for all anticipated payments for known insolvencies.

At December 31, 2019, the Company had unfunded commitments related to its investments in limited partnerships and limited liability companies totaling $888.5 million. At December 31, 2019, unfunded commitments related to commercial mortgage loans and other debt securities totaled $796.0 million.

The Company has two separate service agreements with third party administrators to provide policyholder administrative services. These agreements, subject to certain termination provisions, have ten and twelve-year terms and expire in 2020 and 2030.

14. Leases

The Company leases office space and equipment under several operating leases that expire at various dates through 2051. The Company determines if a contract is a lease at inception or modification. Lease terms may include options to extend or terminate the lease and are included in the lease measurement when it is reasonably certain that the Company will exercise that option. Right-of-use ("ROU") assets represent the right to use an underlying asset for the lease term and corresponding lease liabilities represent the obligation to make lease payments arising from the lease. ROU assets and liabilities are determined using the Company's incremental borrowings rate based upon information available at lease commencement. Certain lease incentives such as free rent periods are recorded as a reduction of the ROU asset. Lease costs for operating leases are recognized on a straight-line basis over the life of the lease.

The Company has lease agreements with both lease and non-lease components. The Company elected the practical expedient to combine lease and non-lease components for certain real estate leases.

Variable lease expenses may include changes in index-linked lease payments and certain variable operating expenses associated with real estate leases. These payments are recognized in operating expenses in the period incurred.

The Company recorded operating lease net ROU assets of $25.6 million and associated lease liabilities of $38.6 million as of December 31, 2019, classified within other assets and other liabilities, respectively. Net lease expense was $32.2 million, $40.0 million, and $32.7 million in 2019, 2018, and 2017, respectively, including expenses associated with software leases.

In 2018, the Company announced the closing of its Denver office as part of a strategic reorganization of the distribution platform. The Company determined that the lease obligation for this building exceeded the economic benefit for the remainder of the contract, resulting in an expense accrual of $8.6 million in 2018. Upon adoption of ASU 2016-02 in 2019, this expense accrual was recorded as an impairment of the associated ROU asset.

The following table summarizes the components of operating lease costs and other information related to operating leases (in thousands):

	Classification	December 31, 2019
Lease Cost:		
Operating leases (1)	Operating costs and other expenses, net of deferrals	$ 12,903
Variable lease costs	Operating costs and other expenses, net of deferrals	2,214
Sublease income	Operating costs and other expenses, net of deferrals	(3,247)
Net Lease Cost		$ 11,870
Other Information:		
Cash paid for amounts included in the measurement of operating lease liability		$ 12,167
ROU assets obtained in exchange for new lease liabilities		$ 132
Weighted average lease term		6 years
Weighted average discount rate		3.6%

(1) Operating lease costs exclude software leases, as intangible assets are excluded from the scope of Accounting Standard Codification 842, Leases.

At December 31, 2019, the maturities of operating lease liabilities were as follows (in thousands):

2020	$	10,033
2021		7,477
2022		6,242
2023		6,109
2024		4,703
Thereafter		8,672
Total	$	43,236
Less: interest		4,675
Present value of lease liabilities	$	38,561

At December 31, 2018, future minimum payments under these non-cancellable operating leases were as follows (in thousands):

2019	$	10,777
2020		10,098
2021		7,642
2022		6,296
2023		5,952
Thereafter		13,281
Total	$	54,046

15. Share-Based Compensation

Certain employees participate in various share award plans relating to Prudential shares and/or American Depositary Receipts ("ADRs") that are tradable on the New York Stock Exchange and are described below.

At certain times, the Company may grant one-off type retention awards to certain key senior executives within Jackson. These awards are subject to the prior approval of the Jackson Remuneration Committee and are nil cost awards with a contingent right to receive Prudential ADRs. The awards are contingent upon continued employment of the recipient through the award vesting date. There are no performance measurements with these awards.

The Company classifies the above plan as an equity settled plan and, therefore, reflects the net reserve related to the compensation expense and the value of the shares distributed under this plan within the consolidated statements of equity. At December 31, 2019 and 2018, the Company had $0.5 million and $3.6 million, respectively, reserved for future payments under this plan.

The Company either acquires shares/ADRs or reimburses Prudential for the costs of any shares/ADRs that were distributed to participants in the above plans, or may be distributed in the future. The shares/ADRs acquired for all the share-award plans are held at cost in a trust account for future distributions. The Company reflects the costs of shares/ADRs held within the consolidated balance sheet as shares held in trust. At December 31, 2019 and 2018, the Company had $4.3 million and $11.4 million of shares/ADRs held at cost in the trust, respectively.

The PLTIP is a Prudential incentive plan in which the Company may grant share awards to eligible employees in the form of a contingent right to receive Prudential ADRs, or a conditional allocation of Prudential ADRs, subject to the prior approval of the Jackson Remuneration Committee. These share awards vest based on the achievement of planned International Financial Reporting Standards ("IFRS") pretax operating income for the U.S. business, have vesting periods of three years and are at nil cost to the employee. Share awards vest between 0% (less than 90% of plan) and 100% (more than 110% of plan) of the grant amounts dependent on IFRS pretax operating income attained over the performance period. Award holders do not have any right to dividends or voting rights attached to the ADRs granted during the performance period. Upon vesting, a number of ADRs equivalent to the value of dividends that otherwise would have been received over the performance period are added to vested awards.

The Company classifies the above plan as liability settled plans and, therefore, reflects the accrued compensation expense and the value of the shares distributed within other liabilities. At December 31, 2019 and 2018, the Company had $85.8 million and $84.5 million, respectively, accrued for future payments under this plan.

The Company recognizes share-based compensation expense associated with the above plans based on the grant-date award fair value ratably over the requisite service period of each individual grant, which generally equals the vesting period. Additional compensation expense is recognized based on the change in fair value of the award at the end of each reporting period. The Company estimates forfeitures when calculating share-based compensation expense.

Total expense related to these share-based performance related compensation plans was as follows (in millions):

	Years Ended December 31,		
	2019	**2018**	**2017**
Prudential LTIP	$ 53.6	$ 26.6	$ 66.3
Retention Share Plan	1.2	(0.3)	4.5
Total compensation expense related to incentive plans	$ 54.8	$ 26.3	$ 70.8
Income tax benefit	$ 11.5	$ 5.5	$ 10.7

The total unrecognized compensation expense related to all share-based plans at December 31, 2019 was $66.0 million with a weighted average remaining period of 1.33 years.

During 2015 and 2019, certain one-off type retention awards were issued.

The weighted average share/ADR fair values of share-based awards granted by the PLTIP during 2019, 2018, and 2017 were $39.75, $49.44, and $42.12, respectively.

The weighted average fair value for the Company's performance awards represents the average Prudential ADR price for the thirty days following Prudential's unaudited annual earnings release date. The fair value amounts relating to the equity settled plans were determined using either the Black-Scholes or Monte Carlo option-pricing models. These models are used to calculate fair values for options and awards at the grant date based on the quoted market price of the stock at the measurement date, the dividend yield, expected volatility, risk-free interest rates and expected term.

Outstanding non-vested Prudential ADRs granted were as follows:

	Prudential LTIP	
	ADR's	Weighted Average Grant Date Fair Value
At December 31, 2017	3,691,079	$ 42.41
Granted	1,231,568	49.44
Exercised	829,976	50.47
Lapsed/Forfeited	290,968	45.56
At December 31, 2018	3,801,703	$ 42.68
Granted	1,995,888	39.75
Exercised	1,217,914	37.27
Lapsed/Forfeited	546,477	44.18
At December 31, 2019	4,033,200	$ 42.66

At December 31, 2019 and 2018, there were 33,435 and nil, respectively, non-vested Prudential ADR grants related to the one-off retention award plan, with a weighted average grant date price of $35.89 and $46.68.

16. Statutory Accounting Capital and Surplus

The Company is required to prepare statutory financial statements in accordance with statutory accounting practices prescribed or permitted by the insurance department of the state of domicile. Statutory accounting practices primarily differ from GAAP by charging policy acquisition costs to expense as incurred and establishing future policy benefit liabilities using different actuarial assumptions, as well as valuing investments and certain assets and accounting for deferred income taxes on a different basis.

Under Michigan Insurance Law, Jackson must provide notification to the Michigan commissioner of insurance prior to payment of any dividend. Ordinary dividends on capital stock may only be distributed out of earned surplus, excluding any unrealized capital gains and the effect of permitted practices (referred to as adjusted earned surplus). At December 31, 2019, the Company had $368.0 million of adjusted earned surplus available for dividends. Ordinary dividends are also limited to the greater of 10% of statutory surplus as of the preceding year-end, excluding any increase arising from the application of permitted practices, or the statutory net income, excluding any net realized investment gains, for the twelve month period ended on the preceding December 31. The commissioner may approve payment of dividends in excess of these amounts, which would be deemed an extraordinary dividend. The maximum amount that would qualify as an ordinary dividend, which would consequently be free from restriction and available for payment of dividends to Brooke Life in 2020, is estimated to be $454.2 million, subject to the availability of adjusted earned surplus as of the dividend date.

Dividends from the Company to its parent were $525.0 million, $451.9 million, and $600.5 million in 2019, 2018, and 2017, respectively. Jackson's 2019, 2018, and 2017 dividends include nil, $1.9 million, and $0.5 million, respectively, related to Jackson's forgiveness of Brooke Life's intercompany tax liability.

Statutory capital and surplus of the Company, as reported in its Annual Statement, was $4.8 billion at both December 31, 2019 and 2018. Statutory net (loss) income of the Company, as reported in its Annual Statement, was $(263.5) million, $1,896.3 million, and $168.4 million in 2019, 2018, and 2017, respectively.

Jackson had been granted a permitted practice that allowed Jackson to carry interest rate swaps at book value, as if the requirements for statutory hedge accounting were in place, instead of at fair value as would have been otherwise required. Jackson was required to demonstrate the effectiveness of its interest rate swap program pursuant to the Michigan Insurance Code. The permitted practice was annually renewed and was in place until September 30, 2019, at which time, with the approval of the Department of Insurance and Financial Services, it was terminated. At December 31, 2018, the effect of the permitted practice decreased statutory surplus by $164.7 million, net of tax. The permitted practice had no impact on statutory net income.

Under Michigan Insurance Law, VOBA is reported as an admitted asset if certain criteria are met. Pursuant to Michigan Insurance Law, the Company reported $131.0 million and $236.5 million of statutory basis VOBA at December 31, 2019 and 2018, respectively, which is fully admissible.

The NAIC has developed certain risk-based capital ("RBC") requirements for life insurance companies. Under those requirements, compliance is determined by a ratio of a company's total adjusted capital ("TAC"), calculated in a manner prescribed by the NAIC to its authorized control level RBC ("ACL RBC"), calculated in a manner prescribed by the NAIC. Companies below specific trigger points or ratios are classified within certain levels, each of which requires specified corrective action. The minimum level of TAC before corrective action commences is twice ACL RBC ("Company action level RBC"). At December 31, 2019, the Company's TAC remained well in excess of the Company action level RBC.

In addition, on the basis of statutory financial statements that insurers file with the state insurance regulators, the NAIC annually calculates twelve financial ratios to assist state regulators in monitoring the financial condition of insurance companies. A usual range of results for each ratio is used as a benchmark and departure from the usual range on four or more of the ratios can lead to inquiries from individual state insurance departments. In 2019 and 2018, there were no significant exceptions with any ratios.

17. Other Related Party Transactions

The Company's investment portfolio is managed by PPM America, Inc. ("PPMA"), a registered investment advisor,. PPMA is ultimately a wholly owned subsidiary of Prudential. The Company paid $76.8 million, $68.9 million, and $45.8 million to PPMA for investment advisory services during 2019, 2018, and 2017, respectively.

NPH, Jackson's former affiliated broker-dealer network, distributed products issued by Jackson and received commissions and fees from Jackson. Commissions and fees paid by Jackson to NPH during 2018, and 2017 totaled $5.6 million and $100.2 million, respectively. In December 2018, the broker dealers were consolidated into NPH, which was then contributed to Jackson via Brooke Life, and converted to NPH LLC.

Jackson has entered into shared services administrative agreement with both NPH and PPMA. Under the shared services administrative agreements, Jackson charged $7.8 million, $8.3 million, and $16.6 million of certain management and corporate services costs to these affiliates in 2019, 2018, and 2017, respectively.

Jackson provides a $100.0 million revolving credit facility to Brooke (Holdco1) Inc., an upstream holding company. The loan is unsecured, matures in December 2021, accrues interest at LIBOR plus 2%, and has a commitment fee of 0.10% per annum. There was no outstanding balance at both December 31, 2019 and 2018. The highest outstanding loan balance during both 2019 and 2018 was nil. During 2019, 2018, and 2017, interest and commitment fees totaled $100 thousand, $100 thousand, and $65 thousand, respectively.

Jackson provides a $40.0 million revolving credit facility to PPMA. The loan is unsecured, matures in September 2023, accrues interest at LIBOR plus 2% per annum and has a commitment fee of 0.10% per annum. There was no outstanding balance at both December 31, 2019 and 2018. The highest outstanding loan balance during both 2019 and 2018 was nil. Interest and commitment fees totaled $40 thousand, $111 thousand, and $107 thousand during 2019, 2018 and 2017, respectively.

Jackson provides a $20.0 million revolving credit facility to Jackson Holdings, LLC, an upstream holding company. The loan is unsecured, matures in June 2024, accrues interest at LIBOR plus 2% per annum and has a commitment fee of 0.25% per annum. The outstanding balance at both December 31, 2019 and 2018, was nil. The highest outstanding loan balance during 2019 and 2018 was nil and $1.5 million, respectively. Interest and commitment fees totaled $0.1 million each year for 2019, 2018, and 2017.

Jackson provides, through its PGDS subsidiary, information security and technology services to certain Prudential affiliates. Jackson recognized $3.4 million, $2.8 million, and $3.7 million of revenue associated with these services during 2019, 2018, and 2017, respectively. This revenue is included in other income in the accompanying consolidated income statements. This revenue is substantially equal to the costs incurred by PGDS to provide the services, which are reported in general and administrative expenses in the consolidated income statements.

18. Benefit Plans

The Company has a defined contribution retirement plan covering substantially all employees and certain affiliates. To be eligible to participate in the Company's contribution, an employee must have attained the age of 21, completed at least 1,000 hours of service in a 12-month period and passed their 12-month employment anniversary. In addition, the employee must be employed on the applicable January 1 or July 1 entry date. The Company's annual contributions, as declared by the board of directors, are based on a percentage of eligible compensation paid to participating employees during the year. In addition, the Company matches a participant's elective contribution, up to 6 percent of eligible compensation, to the plan during the year. The Company's expense related to this plan was $27.8 million, $31.3 million, and $29.7 million in 2019, 2018, and 2017, respectively.

The Company maintains non-qualified voluntary deferred compensation plans for certain agents and employees of Jackson and certain affiliates. At December 31, 2019 and 2018, the liability for such plans totaled $592.5 million and $559.6 million, respectively, and is reported in other liabilities. The Company's expense (income) related to these plans, including a match of elective deferrals for the agents' deferred compensation plan and the change in value of participant elected deferrals, was $69.9 million, $(1.3) million, and $41.5 million in 2019, 2018, and 2017, respectively. Jackson hedges this liability within its overall hedging strategy.

19. Operating Costs and Other Expenses

The following table is a summary of the Company's operating costs and other expenses (in thousands):

	Years Ended December 31, 2019	2018	2017
Commission expenses	$ 1,935,091	$ 1,804,182	$ 1,822,748
John Hancock ceding commission	(65,193)	(555,000)	-
General and administrative expenses	834,064	838,099	833,850
Deferral of policy acquisition costs	(796,908)	(747,095)	(839,143)
Total operating costs and other expenses	$ 1,907,054	$ 1,340,186	$ 1,817,455

20. Reclassifications Out of Accumulated Other Comprehensive Income

The following table represents changes in the balance of AOCI, net of income tax, related to unrealized investment gains (losses) (in thousands):

	December 31, 2019	2018	2017
Balance, beginning of year	$ (182,759)	$ 1,092,974	$ 597,122
OCI before reclassifications	2,593,429	(1,326,661)	406,807
Amounts reclassified from AOCI	64,789	(89,156)	89,045
Cumulative effect of changes in accounting principles	-	140,084	-
Balance, end of year	$ 2,475,459	$ (182,759)	$ 1,092,974

The following table represents amounts reclassified out of AOCI (in thousands):

AOCI Components	Amounts Reclassified from AOCI December 31, 2019	2018	2017	Affected Line Item in the Consolidated Income Statement
Net unrealized investment loss:				
Net realized loss on investments	$ 83,037	$ (111,028)	$ 137,686	Other net investment losses
Other-than-temporary impairments	(1,025)	(1,828)	(693)	Total other-than-temporary impairments
Net unrealized loss before income taxes	82,012	(112,856)	136,993	
Income tax (expense) benefit	(17,223)	23,700	(47,948)	
Reclassifications, net of income taxes	$ 64,789	$ (89,156)	$ 89,045
